# 1 Foreword

# 1.1 Notes on the documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with applicable national standards.

It is essential that the documentation and the following notes and explanations are followed when installing and commissioning the components.

It is the duty of the technical personnel to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

#### **Disclaimer**

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without prior announcement. No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

#### **Trademarks**

Beckhoff®, TwinCAT®, TwinCAT/BSD®, TC/BSD®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered trademarks of and licensed by Beckhoff Automation GmbH.

Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

### **Patent Pending**

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:

EP1590927, EP1789857, EP1456722, EP2137893, DE102015105702 with corresponding applications or registrations in various other countries.

EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

# Copyright

© Beckhoff Automation GmbH & Co. KG, Germany.

The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization are prohibited.

Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.

# 1.2 Safety instructions

# **Safety regulations**

Please note the following safety instructions and explanations!

Product-specific safety instructions can be found on following pages or in the areas mounting, wiring, commissioning etc.

# **Exclusion of liability**

All the components are supplied in particular hardware and software configurations appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

# **Personnel qualification**

This description is only intended for trained specialists in control, automation and drive engineering who are familiar with the applicable national standards.

# **Description of symbols**

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

### **▲ DANGER**

# Serious risk of injury!

Failure to follow the safety instructions associated with this symbol directly endangers the life and health of persons.

# **⚠ WARNING**

# Risk of injury!

Failure to follow the safety instructions associated with this symbol endangers the life and health of persons.

# **A CAUTION**

# Personal injuries!

Failure to follow the safety instructions associated with this symbol can lead to injuries to persons.

# NOTE

# Damage to the environment or devices

Failure to follow the instructions associated with this symbol can lead to damage to the environment or equipment.

# Tip or pointer

This symbol indicates information that contributes to better understanding.

# 1.3 Notes on information security

The products of Beckhoff Automation GmbH & Co. KG (Beckhoff), insofar as they can be accessed online, are equipped with security functions that support the secure operation of plants, systems, machines and networks. Despite the security functions, the creation, implementation and constant updating of a holistic security concept for the operation are necessary to protect the respective plant, system, machine and networks against cyber threats. The products sold by Beckhoff are only part of the overall security concept. The customer is responsible for preventing unauthorized access by third parties to its equipment, systems, machines and networks. The latter should be connected to the corporate network or the Internet only if appropriate protective measures have been set up.

In addition, the recommendations from Beckhoff regarding appropriate protective measures should be observed. Further information regarding information security and industrial security can be found in our <a href="https://www.beckhoff.com/secquide">https://www.beckhoff.com/secquide</a>.

Beckhoff products and solutions undergo continuous further development. This also applies to security functions. In light of this continuous further development, Beckhoff expressly recommends that the products are kept up to date at all times and that updates are installed for the products once they have been made available. Using outdated or unsupported product versions can increase the risk of cyber threats.

To stay informed about information security for Beckhoff products, subscribe to the RSS feed at <a href="https://www.beckhoff.com/secinfo">https://www.beckhoff.com/secinfo</a>.

# 2 Overview

**TwinCAT PLC HMI** is a system needed for the execution of visualizations generated in TwinCAT PLC Control.

If a control program contains associated visualizations these are displayed in full screen mode when the **TwinCAT PLC HMI** is started. The user can operate the control and monitoring functions contained in the underlying project via the mouse or the keyboard. This is possible even if the TwinCAT PLC project file is read-protected. However, the user cannot edit the control program and no menus or toolbars are available, i.e., only pure 'operation' of the visualization elements is available.

The main control and monitoring functions for a project intended for the operator version therefore must be associated with the visualization elements during project creation and operated in online mode. A special input facility is available for this purpose in the configuration dialog for a visualization element.

By seamlessly integrating the development platform for the visualization masks into the PLC programming system **TwinCAT PLC HMI** offers advantages other visualizations simply cannot come up to:

- A tag list of the variables to be used is not needed. It is possible to work directly with the TwinCAT PLC Control variables.
- Variable values in input fields can be modified by expressions (e.g. "Variable1+ Variable2 \* 12 + 5")
- A mighty place-holder concept allows the user to create object-oriented masks.
- The TwinCAT functions "Sampling Trace" and "read/write recipe" are also available in **TwinCAT PLC HMI**.

# **3** Visualization features

It is shown in this table which possibilities the visualisation offers with TwinCAT.

Feature	PLC Con- trol	PLC HMI (TS180 0)	PLC HMI Web (TS18 10)	PLC HMI CE (TS18 00-00 30)	Comment

# 3.1 Restrictions

# **Intern commands**

#### PRINT

Printout of the current visualization is not possible.

# **EXITPROGRAM**

This command is not supported.

### **TRACE**

This command for opening the Sampling Trace window is not supported.

# **SAVEPROJECT**

This command for saving the project is not usable for the Target-Visualization.

# **Grafic formats**

In the Target-Visualization currently only simple bitmaps are supported. Not supported formats: .jpg, .tif, .ico The format .jpg is supported from version 1.0.9 of the TargetVisu DLL.

# Others

# Slider in Table

The slider for scrolling is not displayed.

### **Texts**

Texts exceeding the borders of an element currently do not get clipped.

# **Alarm handling**

TheAlarming is not supported.

### **Trend**

The Online Trend is supported from Version 1.0.8 (without history).

### Place holder

The delivery of parameter to replace placeholder at the call is not supported.

Example:

<Visuname>(<Placeholder1>:=<Text1>, <Placeholder2>:=<Text2>,..., <Placeholder n>:=<Textn>)

# VAR IN OUT

It is not possible to use VAR\_IN\_OUT variables in TwinCAT HMI CE.

### Visu-Side

It is not possible to use the scroll bar in the HMI CE on your visualisation side.

# 4 Installation, Start and Operating

#### Installation:

TwinCAT PLC HMI is available as supplement and can be installed with the setup. A license is with costs, a time-limited demo version is not available.

#### Start:

TwinCAT PLC HMI (TCatPlcCtrlHmi.exe) is started by a connection or a command line:

In each case at least the desired TwinCAT PLC Control project must be given. If no further parameters are set there, TwinCAT PLC HMI automatically will start with a visualization POU named **TC\_VISU** (if existent in the project) and on that target mode, which was set when the project had been saved last.

Additionally, as well the known command line and command file commands (see User Manual TwinCAT PLC Control) as the following special parameter can be used:

### /visu <visualization POU>

If the project contains a visualization POU named TC\_VISU, it will start automatically with this one. If another POU should be the entrance, it must be set in the command line with "/visu <name of visualization POU>".

# **Example for a command line:**

C:\TwinCAT\Plc\TCatPlcCtrlHmi.exe D:\PROJECTS\PROJECT.PRO /visu v\_firstvisupage

The project project.pro will start with the visualization POU 'v\_firstvisupage'. If the visualization should be started automatically with TwinCAT PLC Control, this can be done with a connection in TwinCAT StartUp (All Users) to the 'TCatPlcCtrlHmi.exe' and the named parameters.

### Please regard:

Paths containing spaces must be bordered by quotation marks (").

### **Operating:**

The project will start in **full screen mode** with the entrance POU.

TwinCAT PLC HMI can be operated corresponding to the functions of the visualization elements via keyboard and mouse.

If there is no visualization element configured with a corresponding function, TwinCAT PLC HMI at any time can be terminated by pressing **<Alt><F4>**.
