TwinCAT 3 ADS .NET V6

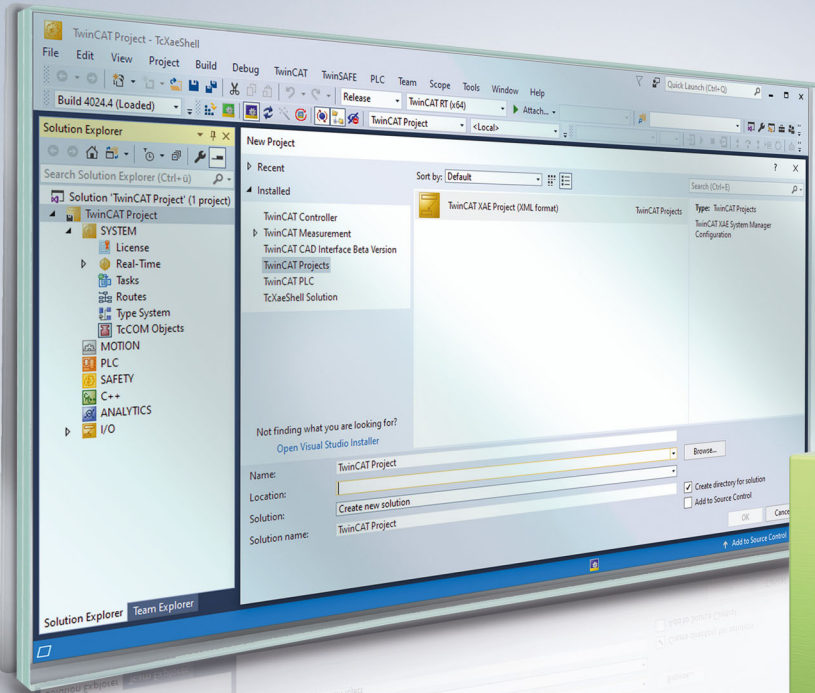

Table of contents

1	Foreword	13
1.1	Notes on the documentation	13
1.2	For your safety	13
1.3	Notes on information security.....	15
2	TwinCAT ADS .NET API Documentation	16
2.1	Prerequisites	17
2.2	Installation	17
3	Version History	19
3.1	Version 6.2	20
3.2	Version 6.1	20
3.3	Version 6.0	21
3.4	Version 5.X.....	21
3.5	Version 4.X.....	22
4	Concepts	23
4.1	Access Data via IndexGroup/IndexOffset	23
4.2	Async programming (async, await)	24
4.3	Use of ADS Notifications	26
4.4	Access Data via Symbolic path	29
4.5	Access Data via Symbol handles	30
4.6	Value marshalling with ANYTYPE concept.....	31
4.7	Access Data via Symbol Loader	35
4.8	Automatic dynamic marshalling of values	36
4.9	Reactive Extensions and ADS	38
5	HowTo Samples	42
5.1	Read/Write primitive values	42
5.2	Read/Write string types	46
5.3	Read/Write PlcOpen types (DATE, TIME ...)	49
5.4	Event driven read with ADS Notifications.....	52
5.5	Reactive Read/Write with Reactive Extensions	54
5.6	Upgrading existing ADS Application code (Version 4.X --> 6.X)	56
6	TwinCAT.Ads Namespaces	59
6.1	TwinCAT Namespace	59
6.1.1	AdsException Class	61
6.1.2	ClientNotConnectedException Class	67
6.1.3	ConnectionState Enumeration	72
6.1.4	ConnectionStateChangedEventArgs Class	74
6.1.5	ConnectionStateChangedReason Enumeration	79
6.1.6	IConnection Interface	79
6.1.7	IConnectionStateObserver Interface.....	85
6.1.8	IConnectionStateProvider Interface	89
6.1.9	ISession Interface	92
6.1.10	ISessionProvider Interface	99
6.1.11	ISessionProvider.TSession, TAddress, TSettings. Interface	102

6.1.12	ISymbolLoaderSettings Interface	104
6.1.13	ISymbolServerProvider Interface	106
6.1.14	Session Class	107
6.1.15	SessionConnectionStateChangedEventArgs Class.....	125
6.1.16	SessionException Class.....	130
6.1.17	SessionNotConnectedException Class.....	137
6.1.18	SessionProvider.TSession, TAddress, TSettings. Class	142
6.1.19	SessionProviderCapabilities Enumeration	148
6.1.20	SymbolLoaderSettings Class	148
6.1.21	SymbolsLoadMode Enumeration	159
6.1.22	ValueUpdateMode Enumeration	159
6.1.23	AdsCommunicationStatistics Class.....	160
6.1.24	RouteAccessType Enumeration.....	169
6.1.25	RoutePersistenceType Enumeration	170
6.1.26	HandleBagNotInitializedException Class	171
6.1.27	IAdsClientSettings Interface.....	175
6.1.28	IValueFactorySettings Interface	176
6.2	TwinCAT.Ads Namespace	179
6.2.1	AdsClient Class.....	183
6.2.2	AdsClientSettings Class.....	399
6.2.3	AdsCommandId Enumeration	404
6.2.4	AdsCommunicationStatistics Class.....	404
6.2.5	AdsConnection Class	412
6.2.6	AdsDataTypeArrayInfo Class.....	660
6.2.7	AdsDataTypeId Enumeration	663
6.2.8	AdsErrorCode Enumeration	664
6.2.9	AdsErrorCodeExtensions Class.....	680
6.2.10	AdsErrorException Class	682
6.2.11	AdsInvalidNotificationException Class	690
6.2.12	AdsNotificationErrorEventArgs Class.....	694
6.2.13	AdsNotificationEventArgs Class.....	695
6.2.14	AdsNotificationExEventArgs Class	699
6.2.15	AdsSession Class	701
6.2.16	AdsSessionBase Class	716
6.2.17	AdsState Enumeration	729
6.2.18	AdsStateChangedEventArgs Class	729
6.2.19	AdsStateChangedEventArgs2 Class	732
6.2.20	AdsSumCommandException Class	735
6.2.21	AdsSymbolVersionChangedEventArgs Class.....	739
6.2.22	AdsTransMode Enumeration	740
6.2.23	AdsVersion Class.....	743
6.2.24	AmsAddress Class.....	752
6.2.25	AmsNetId Class	767
6.2.26	AmsPort Enumeration	795
6.2.27	AmsRouterNotificationEventArgs Class.....	798
6.2.28	AmsRouterState Enumeration	800

6.2.29	DeviceInfo Class	801
6.2.30	IAdsAnyAccess Interface	804
6.2.31	IAdsConnectAddress Interface	835
6.2.32	IAdsConnection Interface.....	876
6.2.33	IAdsDisposableConnection Interface	915
6.2.34	IAdsHandle Interface.....	954
6.2.35	IAdsNotifications Interface	966
6.2.36	IAdsReadWrite Interface	995
6.2.37	IAdsReadWrite2 Interface	1000
6.2.38	IAdsReadWriteTimeoutAccess Interface	1005
6.2.39	IAdsRpcInvoke Interface	1012
6.2.40	IAdsSession Interface	1033
6.2.41	IAdsSessionSettings Interface	1037
6.2.42	IAdsStateControl Interface	1039
6.2.43	IAdsStateControlTimeout Interface	1048
6.2.44	IAdsStateObserver Interface.....	1054
6.2.45	IAdsStateProvider Interface	1056
6.2.46	IAdsSymbolChangedProvider Interface	1061
6.2.47	IAdsSymbolicAccess Interface.....	1065
6.2.48	IAdsSymbolTableProvider Interface.....	1093
6.2.49	INotification Interface	1096
6.2.50	INotificationSettings Interface	1098
6.2.51	IRouterNotificationProvider Interface	1099
6.2.52	Notification Class	1100
6.2.53	NotificationSettings Class	1106
6.2.54	ResultAds Class.....	1116
6.2.55	ResultAnyValue Class.....	1129
6.2.56	ResultDeviceInfo Class	1132
6.2.57	ResultHandle Class.....	1136
6.2.58	ResultRead Class	1143
6.2.59	ResultReadAdsState Class.....	1146
6.2.60	ResultReadBytes Class	1150
6.2.61	ResultReadDeviceState Class	1157
6.2.62	ResultReadWrite Class	1163
6.2.63	ResultReadWriteBytes Class	1170
6.2.64	ResultRpcMethod Class.....	1176
6.2.65	ResultValue.TValue. Class	1181
6.2.66	ResultWrite Class.....	1187
6.2.67	SessionSettings Class	1193
6.2.68	StateInfo Structure	1200
6.2.69	TaskExtensions Class.....	1209
6.2.70	TransportProtocols Enumeration	1212
6.2.71	ValueNotificationEventArgs.T. Class	1213
6.2.72	AdsClientExtensions Class	1215
6.2.73	AdsNotificationsInvalidatedEventArgs Class	1228
6.2.74	IndexGroupSymbolAccess Enumeration	1231

6.2.75	AdsStateCommand Enumeration.....	1233
6.2.76	AmsPortRange Enumeration	1233
6.2.77	ResultValue2.I, V. Class	1234
6.2.78	ResultWriteControl Class	1236
6.3	TwinCAT.Ads.Reactive Namespace	1249
6.3.1	AdsClientExtensions Class	1249
6.3.2	AnyTypeExtensions Class	1281
6.3.3	SymbolValueNotification Class	1331
6.3.4	ValueSymbolExtensions Class	1333
6.4	TwinCAT.Ads.Server Namespace	1374
6.4.1	AdsServer Class	1375
6.4.2	AdsServerException Class.....	1443
6.4.3	ErrorEventArgs Class.....	1448
6.4.4	LoopbackNotRegisteredException Class.....	1450
6.4.5	NotificationDataSample Class.....	1453
6.4.6	NotificationSamplesStamp Class	1456
6.4.7	ServerConnectionState Enumeration.....	1461
6.4.8	ServerConnectionStateChangedEventArgs Class.....	1462
6.4.9	ServerNotConnectedException Class.....	1465
6.4.10	AdsSymbolicServer Class.....	1468
6.4.11	BaseTickTrigger Class	1513
6.4.12	IAddNotificationTrigger Interface.....	1515
6.4.13	INotificationTrigger Interface	1516
6.4.14	NotificationTriggerSource Class.....	1517
6.4.15	LoopbackNotConnectedException Class.....	1523
6.5	TwinCAT.Ads.SumCommand Namespace	1525
6.5.1	ISumCommand Interface	1527
6.5.2	ResultSumCommand Class	1533
6.5.3	ResultSumHandles Class	1538
6.5.4	ResultSumHandles2 Class	1540
6.5.5	ResultSumReadRaw Class.....	1544
6.5.6	ResultSumValues Class.....	1547
6.5.7	SumCreateHandles Class.....	1550
6.5.8	SumHandleRead Class.....	1557
6.5.9	SumHandleWrite Class	1561
6.5.10	SumReleaseHandles Class	1565
6.5.11	SumSymbolRead Class	1572
6.5.12	SumSymbolWrite Class	1582
6.5.13	ISumSymbolRead Interface	1587
6.5.14	ISumCommandExtension Class	1591
6.5.15	ISumRead Interface	1596
6.5.16	ISumRead2.S. Interface.....	1601
6.5.17	ResultSumValues2.S. Class	1605
6.5.18	SumAccessMode Enumeration.....	1608
6.5.19	SumAnyTypeRead Class	1608
6.5.20	SumCommandErrorStrategy Enumeration	1614

6.5.21	SumCommandMode Enumeration.....	1615
6.5.22	SumInstancePathAnyTypeRead Class.....	1615
6.6	TwinCAT.Ads.TcpRouter Namespace.....	1619
6.6.1	AmsTcpIpRouter Class.....	1620
6.6.2	IAmsRouter Interface.....	1646
6.6.3	Route Class.....	1654
6.6.4	RouteCollection Class.....	1664
6.6.5	RouterException Class.....	1678
6.6.6	RouterNotInitializedException Class.....	1682
6.6.7	RouterNotStartedException Class.....	1684
6.6.8	RouterStatus Enumeration.....	1687
6.6.9	RouterStatusChangedEventArgs Class.....	1688
6.6.10	StaticRoutesXmlConfigurationBuilderExtension Class.....	1690
6.6.11	StaticRoutesXmlConfigurationProvider Class.....	1691
6.6.12	StaticRoutesXmlConfigurationSource Class.....	1696
6.7	TwinCAT.Ads.TypeSystem Namespace.....	1698
6.7.1	AliasType Class.....	1699
6.7.2	ArrayType Class.....	1707
6.7.3	BitMappingType Class.....	1718
6.7.4	DataType Class.....	1721
6.7.5	EnumType.T. Class.....	1738
6.7.6	Field Class.....	1750
6.7.7	IAdsSymbol Interface.....	1755
6.7.8	IAdsSymbolLoader Interface.....	1760
6.7.9	IContextMaskProvider Interface.....	1764
6.7.10	Instance Class.....	1765
6.7.11	Member Class.....	1781
6.7.12	PCCHType Class.....	1787
6.7.13	PointerType Class.....	1790
6.7.14	PrimitiveType Class.....	1796
6.7.15	PVoidType Class.....	1801
6.7.16	ReferenceType Class.....	1804
6.7.17	RpcMethod Class.....	1813
6.7.18	RpcMethodParameter Class.....	1824
6.7.19	RpcStructType Class.....	1835
6.7.20	StringType Class.....	1840
6.7.21	StructType Class.....	1846
6.7.22	SubRangeType.T. Class.....	1856
6.7.23	Symbol Class.....	1863
6.7.24	SymbolIterator Class.....	1916
6.7.25	SymbolLoaderFactory Class.....	1923
6.7.26	UnionType Class.....	1933
6.7.27	WStringType Class.....	1938
6.7.28	AlignmentCalculator Class.....	1944
6.7.29	FluentRpcMethodExtension Class.....	1947
6.7.30	FluentRpcStructTypeExtension Class.....	1952

6.7.31	FluentStructTypeExtension Class	1955
6.7.32	InterfaceType Class	1957
6.7.33	RpcStructInstance Class	1966
6.7.34	UnionInstance Class	1992
6.8	TwinCAT.Ads.ValueAccess Namespace	2002
6.8.1	ValueAccessMode Enumeration	2002
6.9	TwinCAT.Ams Namespace	2003
6.9.1	AmsConfiguration Class.....	2004
6.9.2	AmsServerErrorCode Enumeration	2008
6.9.3	AmsServerException Class.....	2009
6.9.4	IAdsHeaderDump Interface.....	2012
6.9.5	AmsPortNotAvailableException Class	2013
6.10	TwinCAT.PlcOpen Namespace	2016
6.10.1	DATE Class.....	2016
6.10.2	DateBase Class	2023
6.10.3	DT Class	2034
6.10.4	IPlcOpenTimeBase Interface	2041
6.10.5	IPlcOpenTimeBase.T1, T2. Interface.....	2043
6.10.6	LTIME Class.....	2045
6.10.7	LTimeBase Class.....	2053
6.10.8	TIME Class.....	2061
6.10.9	TimeBase Class	2068
6.10.10	TOD Class.....	2077
6.11	TwinCAT.TypeSystem Namespace	2083
6.11.1	AnySymbolSpecifier Class	2091
6.11.2	AnyTypeSpecifier Class	2094
6.11.3	CannotAccessVirtualSymbolException Class	2103
6.11.4	CannotResolveDataTypeException Class	2106
6.11.5	DataTypeCategory Enumeration.....	2111
6.11.6	DataTypeCollection Class.....	2112
6.11.7	DataTypeEventArgs Class	2118
6.11.8	DataTypeException Class.....	2121
6.11.9	DataTypeNameEventArgs Class	2127
6.11.10	Dimension Class	2130
6.11.11	DimensionCollection Class	2133
6.11.12	DynamicAliasInstance Class.....	2149
6.11.13	DynamicArrayInstance Class	2160
6.11.14	DynamicOversamplingArrayInstance Class.....	2176
6.11.15	DynamicPointerInstance Class	2186
6.11.16	DynamicPointerValue Class.....	2196
6.11.17	DynamicReferenceInstance Class	2202
6.11.18	DynamicReferenceValue Class	2217
6.11.19	DynamicRpcStructInstance Class.....	2223
6.11.20	DynamicStructInstance Class	2251
6.11.21	DynamicSymbol Class	2266
6.11.22	DynamicSymbolsCollection Class.....	2327

6.11.23	DynamicUnionInstance Class	2336
6.11.24	DynamicValue Class	2347
6.11.25	DynamicVirtualStructInstance Class	2374
6.11.26	EnumValue.T. Class	2384
6.11.27	EnumValueCollection Class.....	2391
6.11.28	EnumValueCollection.T. Class.....	2407
6.11.29	FieldCollection Class.....	2427
6.11.30	IAliasInstance Interface.....	2433
6.11.31	IAliasType Interface	2436
6.11.32	IAnyTypeMarshaler Interface	2441
6.11.33	IArrayInstance Interface	2453
6.11.34	IArrayType Interface.....	2459
6.11.35	IArrayValue Interface	2465
6.11.36	IAttributedInstance Interface	2469
6.11.37	IBitSize Interface	2472
6.11.38	IDataType Interface.....	2475
6.11.39	IDataTypeCollection Interface.....	2484
6.11.40	IDataTypeCollection.T. Interface.....	2486
6.11.41	IDimension Interface	2490
6.11.42	IDimensionCollection Interface	2492
6.11.43	IDynamicSymbol Interface	2496
6.11.44	IDynamicSymbolLoader Interface.....	2500
6.11.45	IDynamicSymbolsCollection Interface.....	2503
6.11.46	IDynamicValue Interface	2504
6.11.47	IEnumType Interface.....	2507
6.11.48	IEnumType.T. Interface.....	2516
6.11.49	IEnumValue Interface.....	2524
6.11.50	IEnumValueCollection Interface.....	2527
6.11.51	IEnumValueCollection.TEnumValue, TValue. Interface.....	2529
6.11.52	IField Interface	2535
6.11.53	IFieldCollection Interface.....	2538
6.11.54	IGenericTypeMarshaler Interface.....	2542
6.11.55	IHierarchicalSymbol Interface	2545
6.11.56	IInstance Interface.....	2549
6.11.57	IInstanceCollection.T. Interface.....	2554
6.11.58	IMember Interface	2561
6.11.59	IMemberCollection Interface	2565
6.11.60	INamespaceCollection Interface	2570
6.11.61	INamespaceCollection.T. Interface	2571
6.11.62	InstanceCollectionMode Enumeration	2573
6.11.63	InsufficientAccessRightsException Class	2573
6.11.64	IOversamplingArrayInstance Interface.....	2576
6.11.65	IPointerInstance Interface	2580
6.11.66	IPointerType Interface.....	2584
6.11.67	IPrimitiveType Interface	2588
6.11.68	IProcessImageAddress Interface.....	2593

6.11.69	IReferenceInstance Interface	2595
6.11.70	IReferenceType Interface.....	2600
6.11.71	IRpcCallableInstance Interface	2606
6.11.72	IRpcCallableType Interface.....	2624
6.11.73	IRpcMethod Interface.....	2625
6.11.74	IRpcMethodCollection Interface	2629
6.11.75	IRpcMethodParameter Interface.....	2635
6.11.76	IRpcMethodParameterCollection Interface	2639
6.11.77	IRpcStructInstance Interface.....	2642
6.11.78	IStringInstance Interface	2646
6.11.79	IStringMarshaler Interface.....	2650
6.11.80	IStringType Interface.....	2661
6.11.81	IStructInstance Interface	2666
6.11.82	IStructType Interface.....	2671
6.11.83	IStructValue Interface.....	2678
6.11.84	ISubRangeType Interface	2681
6.11.85	ISubRangeType.T. Interface.....	2686
6.11.86	ISymbol Interface	2691
6.11.87	ISymbolCollection Interface	2697
6.11.88	ISymbolCollection.T. Interface	2700
6.11.89	ISymbolFactory Interface	2702
6.11.90	ISymbolFactoryServiceProvider Interface	2711
6.11.91	ISymbolInfo Interface	2712
6.11.92	ISymbolLoader Interface.....	2714
6.11.93	ISymbolProvider Interface.....	2717
6.11.94	ISymbolServer Interface.....	2719
6.11.95	ITypeAttribute Interface.....	2725
6.11.96	ITypeAttributeCollection Interface	2726
6.11.97	ITypeMarshaler Interface	2731
6.11.98	IUnionInstance Interface	2737
6.11.99	IUnionType Interface.....	2740
6.11.100	IValue Interface.....	2745
6.11.101	IValueAccessorProvider Interface.....	2752
6.11.102	IValueAnySymbol Interface.....	2753
6.11.103	IValueRawSymbol Interface.....	2765
6.11.104	IValueSymbol Interface.....	2775
6.11.105	IVirtualStructInstance Interface	2790
6.11.106	MarshalException Class.....	2795
6.11.107	MemberCollection Class	2802
6.11.108	MethodParamFlags Enumeration	2812
6.11.109	PrimitiveTypeFlags Enumeration	2812
6.11.110	RawValueChangedEventArgs Class.....	2813
6.11.111	ReadOnlyDataValueCollection Class.....	2815
6.11.112	ReadOnlyDimensionCollection Class	2818
6.11.113	ReadOnlyEnumValueCollection Class.....	2824
6.11.114	ReadOnlyEnumValueCollection.T. Class.....	2833

6.11.115	ReadOnlyFieldCollection Class.....	2841
6.11.116	ReadOnlyMemberCollection Class	2845
6.11.117	ReadOnlyMethodParameterCollection Class.....	2852
6.11.118	ReadOnlyRpcMethodCollection Class	2855
6.11.119	ReadOnlySymbolCollection Class	2861
6.11.120	ReadOnlyTypeAttributeCollection Class	2866
6.11.121	ResultDataTypes Class.....	2872
6.11.122	ResultDynamicSymbols Class	2876
6.11.123	ResultSymbols Class	2880
6.11.124	ResultSymbols.T. Class	2884
6.11.125	RpcInvokeException Class	2887
6.11.126	RpcMethodCollection Class	2894
6.11.127	RpcMethodNotSupportedException Class.....	2910
6.11.128	RpcMethodParameterCollection Class	2915
6.11.129	StringConvertMode Enumeration.....	2927
6.11.130	SymbolAccessRights Enumeration	2928
6.11.131	SymbolCollection Class	2928
6.11.132	SymbolException Class	2933
6.11.133	TypeAttribute Class.....	2946
6.11.134	TypeAttributeCollection Class	2952
6.11.135	ValueChangedBaseEventArgs Class.....	2968
6.11.136	ValueChangedEventArgs Class.....	2971
6.11.137	AlignedMemberCollection Class	2973
6.11.138	FluentAlignedMemberCollectionExtension Class	2980
6.11.139	IDimensionCollectionExtension Class.....	2981
6.11.140	IInterfaceType Interface	2983
6.11.141	IRpcStructType Interface	2990
6.11.142	DynamicInterfaceInstance Class.....	2995
6.11.143	IInterfaceInstance Interface.....	3014
6.11.144	SymbolIterationMask Enumeration	3019
6.11.145	AnyTypeValueCreator Class.....	3020
6.11.146	DataTypeExtension Class.....	3021
6.11.147	DataTypeResolveStrategy Enumeration.....	3042
6.11.148	DynamicArrayValue Class	3042
6.11.149	DynamicEnumValue Class.....	3048
6.11.150	UInt32Ptr Structure	3054
6.11.151	UInt64Ptr Structure	3070
6.12	TwinCAT.TypeSystem.Generic Namespace.....	3086
6.12.1	DataTypeCollection.T. Class.....	3087
6.12.2	INamespace.TType. Interface.....	3102
6.12.3	InstanceCollection.T. Class.....	3104
6.12.4	ISymbolProvider.TNamespace, TDataType, TSymbol. Interface	3122
6.12.5	NamespaceCollection.T. Class	3126
6.12.6	ReadOnlyDataTypeCollection.T. Class.....	3139
6.12.7	ReadOnlyInstanceCollection.T. Class.....	3145
6.12.8	ReadOnlyNamespaceCollection.T. Class	3154

6.12.9	ReadOnlySymbolCollection.T. Class	3161
6.12.10	SymbolCollection.T. Class	3165

1 Foreword

1.1 Notes on the documentation

This description is intended exclusively for trained specialists in control and automation technology who are familiar with the applicable national standards.

For installation and commissioning of the components, it is absolutely necessary to observe the documentation and the following notes and explanations.

The qualified personnel is obliged to always use the currently valid documentation.

The responsible staff must ensure that the application or use of the products described satisfies all requirements for safety, including all the relevant laws, regulations, guidelines, and standards.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without notice.

No claims to modify products that have already been supplied may be made on the basis of the data, diagrams, and descriptions in this documentation.

Trademarks

Beckhoff®, TwinCAT®, TwinCAT/BSD®, TC/BSD®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered and licensed trademarks of Beckhoff Automation GmbH.

If third parties make use of designations or trademarks used in this publication for their own purposes, this could infringe upon the rights of the owners of the said designations.

Patents

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:

EP1590927, EP1789857, EP1456722, EP2137893, DE102015105702
and similar applications and registrations in several other countries.

EtherCAT®

EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

Copyright

The distribution and reproduction of this document as well as the use and communication of its contents without express authorization are prohibited.

Offenders will be held liable for the payment of damages. All rights reserved in the event that a patent, utility model, or design are registered.

1.2 For your safety

Safety regulations

Read the following explanations for your safety.

Always observe and follow product-specific safety instructions, which you may find at the appropriate places in this document.

Exclusion of liability

All the components are supplied in particular hardware and software configurations which are appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

Personnel qualification

This description is only intended for trained specialists in control, automation, and drive technology who are familiar with the applicable national standards.

Signal words

The signal words used in the documentation are classified below. In order to prevent injury and damage to persons and property, read and follow the safety and warning notices.

Personal injury warnings**⚠ DANGER**

Hazard with high risk of death or serious injury.

⚠ WARNING

Hazard with medium risk of death or serious injury.

⚠ CAUTION

There is a low-risk hazard that could result in medium or minor injury.

Warning of damage to property or environment**NOTICE**

The environment, equipment, or data may be damaged.

Information on handling the product

This information includes, for example:
recommendations for action, assistance or further information on the product.

1.3 Notes on information security

The products of Beckhoff Automation GmbH & Co. KG (Beckhoff), insofar as they can be accessed online, are equipped with security functions that support the secure operation of plants, systems, machines and networks. Despite the security functions, the creation, implementation and constant updating of a holistic security concept for the operation are necessary to protect the respective plant, system, machine and networks against cyber threats. The products sold by Beckhoff are only part of the overall security concept. The customer is responsible for preventing unauthorized access by third parties to its equipment, systems, machines and networks. The latter should be connected to the corporate network or the Internet only if appropriate protective measures have been set up.

In addition, the recommendations from Beckhoff regarding appropriate protective measures should be observed. Further information regarding information security and industrial security can be found in our <https://www.beckhoff.com/secguide>.

Beckhoff products and solutions undergo continuous further development. This also applies to security functions. In light of this continuous further development, Beckhoff expressly recommends that the products are kept up to date at all times and that updates are installed for the products once they have been made available. Using outdated or unsupported product versions can increase the risk of cyber threats.

To stay informed about information security for Beckhoff products, subscribe to the RSS feed at <https://www.beckhoff.com/secinfo>.

2 TwinCAT ADS .NET API Documentation

The TwinCAT .NET API implements support for the TwinCAT Automation Device specification (ADS). It can be used within .NET Framework programming languages and support ADS Client implementations. The ADS API interface permits:

- The Implementation of ADS Clients
- Browsing of (ADS) server side symbolic information.
- Reading and writing ProcessImage information in Raw or in type safe manner.
- Receiving ADS Notifications as events.

Getting Started

For getting started please have a look at the following documents:

- [Prerequisites \[▶ 17\]](#)
- [Installation \[▶ 17\]](#)
- [Concepts \[▶ 23\]](#)
- [HowTo Samples \[▶ 42\]](#)

Background information about the TwinCAT ADS protocol can be found here:

- [ADS Introduction](#)
- [TwinCAT ADS Device concept](#)

for common ADS information.

From the conceptual standpoint within this ADS .NET API reference documentation, the most important starting points for reading are the following Classes/Methods:

Main documentation entry points

Description	Link
Addressing ADS Devices via AmsNetId Address information.	AmsNetId [▶ 767]
Communicate to ADS Devices via the AdsClient class.	AdsClient [▶ 183]
Implement your own (virtual) ADS Server	AdsServer [▶ 1375]
Browse target system symbolic information. Creation of the SymbolLoader via Factory class.	SymbolLoaderFactory.Create(IConnection,ISymbolLoaderSettings) [▶ 1924]
Session and Connection management on top of the ADS communication channel established by the AdsClient.	AdsSession [▶ 701] , AdsConnection [▶ 412]
Usage of Ads.Rx (Reactive extensions) to write reactive code.	AdsClientExtensions [▶ 1249] , AdsClientExtensions [▶ 1249] The ADS reactive extensions are only available for usage, when the corresponding Nuget package is downloaded from Nuget.org. Beckhoff.TwinCAT.Ads.Reactive package on Nuget

[HowTo Samples \[▶ 42\]](#)

[Version History \[▶ 19\]](#)

2.1 Prerequisites

Preconditions for installing/Using the TwinCAT .NET ADS Communication API Version 6.X

To develop an application the TwinCAT .NET ADS Communication API the following software infrastructure must be available on the development system.

- An ADS/AMS Router (e.g. TwinCAT >= 4024.10) that is capable to Route the ADS/AMS Frames between systems.
- The .NET SDK to develop the application software.
- ADS Nuget packages referenced within the application project to develop TwinCAT ADS data exchange / communication.

ADS/AMS Router

- A TwinCAT installation Version >= 4024.10.

Because the Beckhoff.TwinCAT.Ads Version 6.X uses internal interfaces that are available only from TwinCAT 4024.10 on, an appropriate version must be installed locally.

The package doesn't work with older installations - the actually only alternative is the AdsRouterConsole.

- Or alternatively a running instance of the '[Beckhoff.TwinCAT.Ads.TcpRouter](#)' for customized router implementations or the 'ready-out-of-the-box' router package '[Beckhoff.TwinCAT.Ads.AdsRouterConsole](#)' for use on system without TwinCAT.

A Software development kit for .NET (SDK)

At least one of the following SDKs and target frameworks is necessary:

- .NET 5.0 or later
- .NET Core 3.1 or later
- .NET Framework 4.61 or later
- .NET Standard 2.0 compatible SDK or later

The Beckhoff.TwinCAT.Ads components for the application.

The following Nuget packages must be added to the application project as package references:

- The '[Beckhoff.TwinCAT.Ads Nuget](#)' package.
- and optionally the '[Beckhoff.TwinCAT.Ads.Reactive](#)' package.

2.2 Installation

The now preferred way to install the TwinCAT ADS .NET Communication API is to use the NuGet.org package manager.

Beckhoff.TwinCAT.Ads package from Nuget.org repository.

This is the main package implementing the ADS client functionality. This is needed to establish ADS connections to local and remote devices.

Please follow the install instructions on the Nuget.org site.

[Beckhoff.TwinCAT.Ads Nuget Package](#)

Beckhoff.TwinCAT.Ads.Reactive package from Nuget.org repository.

This package installs Reactive extensions on top of the [Beckhoff.TwinCAT.Ads Nuget Package](#) and installs additional extensions to map ADSNotifications to observable events.

Please follow the install instructions on the Nuget.org site.

[Beckhoff.TwinCAT.Ads.Reactive Nuget Package](#)

3 Version History

This chapter documents the different active development lines of the **Beckhoff.TwinCAT.ADS .NET API** and its package Versions.

Several flavours of the .NET Framework exist (both actually still supported and outdated). Therefore different versions of the packages exist that support the different .NET lines and releases. Background information can be read here: [Fundamentals about .NET Full Framework, .NET Core and the supported Operating Systems](#)

Here we highlight the different version lines of the **Beckhoff.TwinCAT.ADS .NET API** package and their link to the .NET Framework.

Version support lifecycle

Package	Description	.NET Framework	TwinCAT	Active Support
Version 6.2 [▶ 20]	Frameworks support of .NET 8.0 and below (.NET Core)	net8.0 (LTS), net6.0 (LTS), netstandard2.0	>= 3.1.4024.10 Requirement on the Host system. No version limitation in remote system communication.	X
Version 6.1 [▶ 20]	Framework support of .NET 7.0 [1] and below (.NET Core)	net7.0, net6.0 (LTS), netstandard2.0	>= 3.1.4024.10 Requirement on the Host system. No version limitation in remote system communication.	X [1]
Version 6.0 [▶ 21]	Framework support of .NET 6.0 and below (.NET Core)	net6.0 (LTS), netcoreapp3.1, netstandard2.0, net461	>= 3.1.4024.10 Requirement on the Host system. No version limitation in remote system communication.	X
Version 5.X [▶ 21]	Framework support of .NET 5.0 [2] and below (.NET Core)	net5.0, netcoreapp3.1, netstandard2.0, net461	>= 3.1.4024.10 Requirement on the Host system. No version limitation in remote system communication.	O [2]
Version 4.X [▶ 22]	Package basing on .NET Framework 4.0 (Full Framework)	net4	All	X

[1]: Microsoft support for .NET7 ends with May 14, 2024.

[2]: Microsoft support for .NET5 ended with May 8, 2022. Therefore it is recommended to update **Beckhoff.TwinCAT** packages from Version 5 to Version 6.

[Migrate from ASP.NET Core 5.0 to 6.0.](#)

[Migrating to the latest .NET.](#)

[Microsoft .NET support lifecycle.](#)

Other Resources

[TwinCAT ADS .NET API Documentation \[▶ 16\]](#)

3.1 Version 6.2

[Beckhoff.TwinCAT.Ads Package Version 6.2](#)

It supports **TwinCAT version** $\geq 3.1.4024.10$ running on the same Device. **TwinCAT** versions $<3.1.4024.10$ are *not* supported! There are no limitations with remote TwinCAT Systems. For accessing TwinCAT2 locally, please use Version 4.X.

Because this package is basing on .NET Core, the support of different Operating Systems like Linux or MacOS beneath windows is given.

This package contains multi-platform binaries for **net70**, **net60**, **netstandard2.0** so that many flavors of applications and Operation systems can be covered. For more information please see the Microsoft documentation.

The Full .NET Framework up to .NET482 is covered by **netstandard2.0**.

Key characteristics

- .NET 6 and above supports a wide range of operating systems.
[Supported OperatingSystems \(net80\)](#)
- Basing on .NET Core (Verison 8.0)
Target support for **net80 (LTS)**, **net60 (LTS)**, **netstandard2.0**
- Asynchronous programming model (support of the `async/await` statements, see also [Concept of async operation \[▶ 24\]](#))
- Integrated support for implementing customized AdsServers ([AdsServer \[▶ 1375\]](#) and [AdsSymbolicServer \[▶ 1468\]](#))
- Optimized interfaces enhancing scalability and performance by using Span.T. and Memory.T..
- Reactive Extension Functions for PollingValues, AdsStates, ...

Other Resources

[Version History \[▶ 19\]](#)

3.2 Version 6.1

[Beckhoff.TwinCAT.Ads Package Version 6.1](#)

It supports **TwinCAT version** $\geq 3.1.4024.10$ running on the same Device. **TwinCAT** versions $<3.1.4024.10$ are *not* supported! There are no limitations with remote TwinCAT Systems. For accessing TwinCAT2 locally, please use Version 4.X.

Because this package is basing on .NET Core, the support of different Operating Systems like Linux or MacOS beneath windows is given.

This package contains multi-platform binaries for **net70**, **net60**, **netstandard2.0** so that many flavors of applications and Operation systems can be covered. For more information please see the Microsoft documentation.

The Full .NET Framework up to .NET482 is covered by **netstandard2.0**.

Key characteristics

- Basing on .NET Core (Verison 7.0)
.NET 7 and below support a wide range of operating systems ([Supported OperatingSystems \(net7.0\)](#)).

- Target support for **net70**, **net60 (LTS)**, **netstandard2.0**
- Asynchronous programming model (support of the `async/await` statements, see also [Concept of async operation](#) [[▶ 24](#)])
- Integrated support for implementing customized `AdsServers` ([AdsServer](#) [[▶ 1375](#)] and [AdsSymbolicServer](#) [[▶ 1468](#)])
- Optimized interfaces enhancing scalability and performance by using `Span.T.` and `Memory.T.`
- Reactive Extension Functions for `PollingValues`, `AdsStates`, ...

Other Resources

[Version History](#) [[▶ 19](#)]

3.3 Version 6.0

[Beckhoff.TwinCAT.Ads](#) Package Version 6.0

It supports **TwinCAT version** $\geq 3.1.4024.10$ running on the same Device. **TwinCAT** versions $<3.1.4024.10$ are *not* supported! There are no limitations with remote TwinCAT Systems. For accessing TwinCAT2 locally, please use Version 4.X.

Another reason for usage of this package is the support of different Operating Systems like Linux or MacOS beneath windows.

This package contains multi-platform binaries for **net60**, **netstandard2.0**, **net461**, **netcoreapp3.1** so that many flavors of applications and Operation systems can be covered. For more information please see the Microsoft documentation.

Key characteristics

- Basing on .NET Core (Long Term Version 6.0)
.NET 6 (LTS) supports a wide range of operating systems ([Supported OperatingSystems \(net6.0\)](#)).
- Target support for **net60 (LTS)**, **netstandard2.0**, **net461**, **netcoreapp3.1**
- Asynchronous programming model (support of the `async/await` statements, see also [Concept of async operation](#) [[▶ 24](#)])
- Integrated support for implementing customized `AdsServers` ([AdsServer](#) [[▶ 1375](#)] and [AdsSymbolicServer](#) [[▶ 1468](#)])
- Optimized interfaces enhancing scalability and performance by using `Span.T.` and `Memory.T.`

Other Resources

[Version History](#) [[▶ 19](#)]

3.4 Version 5.X

[Beckhoff.TwinCAT.Ads](#) Package Version 5.0

Microsoft support for .NET5 ends with May 8, 2022. Therefore it is recommended to update Beckhoff.TwinCAT packages from Version 5 to Version 6 because this version is outdated.

Therefore, although `.net50` is still operational and can still downloaded from Microsoft, it is *not* recommended to use the Series 5.X package for new application releases anymore. **This package is not under active development anymore and should be replaced by the [Version 6.X series](#) [[▶ 21](#)] as soon as possible.**

It supports **TwinCAT version** $\geq 3.1.4024.10$ running on the same Device. **TwinCAT** versions $<3.1.4024.10$ are *not* supported! There are no limitations with remote TwinCAT Systems. For accessing TwinCAT2 locally, please use Version 4.X.

Different Operating Systems like Linux or MacOS are supported beneath windows.

This package contains multi-platform binaries for **net50**, **netstandard2.0**, **net461**, **netcoreapp3.1** so that many flavors of applications and Operation systems can be covered. For more information please see the Microsoft documentation.

Key characteristics

- Basing on .NET Core.
.NET 5 supports a wide range of operating systems ([Supported OperatingSystems](#)).
- Target support for **net50**, **netstandard2.0**, **net461**, **netcoreapp3.1**
- Asynchronous programming model (support of the async/await statements, see also [Concept of async operation \[► 24\]](#))
- Integrated support for implementing customized AdServers ([AdsServer \[► 1375\]](#))
- Optimized interfaces enhancing scalability and performance by using Span.T. and Memory.T..

Hints for upgrading packages to version 6.0

[Migrate from ASP.NET Core 5.0 to 6.0.](#)

[Migrating to the latest .NET.](#)

[Microsoft .NET support lifecycle.](#)

Other Resources

[Version History \[► 19\]](#)

3.5 Version 4.X

[Beckhoff.TwinCAT.Ads 4.X Series Package](#)

The 4.X package series is recommended to use when the support of **TwinCAT version < 3.1.4024.10** (including TwinCAT 2) is a necessity on the same system. Although it is based on the Full .NET Framework (net4) it is useable in newer .NET Core Generations (net8.0, net6.0 but not in standard2.0 applications). However, the use then is limited to **Windows only**.

This version is still under active support.

Key characteristics

- Windows only
- Basing on .NET Framework 4.0 (**net40**, .NET Full Framework)
- Supports all versions of TwinCAT (including TwinCAT 2 and TwinCAT 3 versions) running on the local system.
- Synchronous communication
- Asynchronous Read/Write requestes (with async-Statement) are not supported.

Other Resources

[Version History \[► 19\]](#)

4 Concepts

Concepts introduction

Concepts

Concepts discussed

Name	Description
IndexGroup / IndexOffset	Read/Write values by IndexGroup / IndexOffset [▶ 23]
Symbolic access	Read/Write values by symbolic instance path [▶ 29]
Access via symbol handle	Read/Write values by symbol handles. [▶ 30]
Asynchronous programming (async, await)	Concept of async operation [▶ 24]
ADS Notifications	Concept of ADS Notifications [▶ 26]
Symbol loader access	Access symbolic information by Symbol loader [▶ 35]
Marshalling values via ANYTYPE concept	ANY Type blittable type marshalling [▶ 31]
Dynamic automatic marshalling via Dynamic Language Runtime	Use of the .NET Framework Dynamic Language Runtime (DLR) [▶ 36]
Access via reactive extensions	Observer value changes by ADS Reactive Extensions [▶ 38]

Other Resources

[TwinCAT ADS .NET API Documentation \[▶ 16\]](#)

4.1 Access Data via IndexGroup/IndexOffset

Reading/Writing values by Index/Group index offset are the most basic way to access data via ADS. This address combination directly link into the process image of virtual ADS Devices.

As long the process image is static this is unproblematic and a system near access, but if the content is more dynamic and the address changes over time the IndexGroup/IndexOffset can get invalid.

Examples about moving addresses could be:

- Changed Parametrization of IO (and Re-activation)
- The PLC Online change
- New Plc Downloads

In that case other access methods could be advantageous.

Another important point is that the data access is not type safe. The values are read or written to or from byte buffers and the proper marshalling/unmarshalling is the task of the application code.

Asynchronous access

Access ProcessImage Data by IndexGroup/IndexOffset

```
CancellationToken cancel = CancellationToken.None;
```

```
using (AdsClient client = new AdsClient())
{
    UInt32 valueToRead = 0;
    UInt32 valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
```

```

byte[] writeData = new byte[sizeof(uint)];

// Write an UINT32 Value
MemoryStream writeStream = new MemoryStream(writeData);
BinaryWriter writer = new BinaryWriter(writeStream);
writer.Write(valueToWrite);
ResultWrite resultWrite = await client.WriteAsync(0x4020, 0x0, writeData.AsMemory(),cancel);

// Read an UINT32 Value
byte[] readData = new byte[sizeof(uint)];
ResultRead resultRead = await client.ReadAsync(0x4020, 0x0, readData.AsMemory(),cancel);

MemoryStream readStream = new MemoryStream(readData);
BinaryReader reader = new BinaryReader(readStream);
valueToRead = reader.ReadUInt32();
}

```

Synchronous access

Access ProcessImage Data by IndexGroup/IndexOffset

```

using (AdsClient client = new AdsClient())
{
    UInt32 valueToRead = 0;
    UInt32 valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Write an UINT32 Value
    byte[] writeData = new byte[sizeof(uint)];
    MemoryStream writeStream = new MemoryStream(writeData);
    BinaryWriter writer = new BinaryWriter(writeStream);
    writer.Write(valueToWrite);
    client.Write(0x4020, 0x0, writeData);

    // Read an UINT32 Value
    byte[] readData = new byte[sizeof(uint)];
    int readBytes = client.Read(0x4020, 0x0, readData);

    MemoryStream readStream = new MemoryStream(readData);
    readStream.Position = 0;
    BinaryReader reader = new BinaryReader(readStream);
    valueToRead = reader.ReadUInt32();
}

```

4.2 Async programming (async, await)

Since .NET Version 4.0, the .NET API supports concurrent operation in form of the compiler support of the async/await statements. This is a special code generation supported flavor of concurrency that uses so called 'futures'. A 'future' (or promise) is a type that represents an operation that will be completed in the future and is represented by the .NET type `Task` or `Task.TRESULT` type. This ensures that the called asynchronous method is started on call and delivers its result later on, without blocking the calling thread. As consequence the calling thread is able to process other work in the meanwhile. The deep support level in the .NET framework and the underlying code generation makes asynchronous programming almost as easy as synchronous programming.

From version 5.0.0 on, the TwinCAT.Ads API also supports the async programming model.

The main advantages are:

- Remains responsiveness of GUI applications during ADS communication
- Asynchronous programming enables scalability (mainly on the Server side)
- Easy synchronization between threads, nearly as simple as asynchronous programming.
- Functional, stateless programming style seamlessly integrating with other concurrency techniques like parallel programming ([.NET Task Parallel Library](#)) or reactive programming ([Reactive Extensions \[▶ 381\]](#)).

More about asynchronous programming can be read here: [Asynchronous programming](#)

and here: [The Task asynchronous programming model in C#](#)

Example

Read/Write AnyType by IndexGroup/IndexOffset (asynchronously)

```
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    ResultWrite resultWrite = await client.WriteAnyAsync(0x4020, 0x0, valueToWrite, cancel);
    bool succeeded = resultWrite.Succeeded;

    ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(0x4020, 0x0, cancel);

    if (resultRead.Succeeded)
    {
        valueToRead = (uint)resultRead.Value;
    }
}
```

Read/Write AnyType by variable handle (asynchronously)

```
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);

    uint valueToRead = 0;
    uint valueToWrite = 42;

    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.nCounter", cancel);
    varHandle = resultHandle.Handle;

    if (resultHandle.Succeeded)
    {
        try
        {
            ResultWrite resultWrite = await client.WriteAnyAsync(varHandle, valueToWrite, cancel);
            ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(varHandle, cancel);

            if (resultRead.Succeeded)
                valueToRead = resultRead.Value;
        }
        finally
        {
            // Unregister VarHandle after Use
            ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
        }
    }
}
```

Read/Write AnyType by SymbolBrowser (asynchronously)

```
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);

    if (resultSymbols.Succeeded)
    {
        Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];

        // Works for ALL Primitive 'ANY TYPES' Symbols
        ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
        ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);
    }
}
```

```

        if (resultRead.Succeeded)
            valueToRead = (uint)resultRead.Value;

        // Simple filtering of Symbols
        Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"

        // FilterFunction that filters for the InstancePath
        Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
        SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true,
selector: filter);

        foreach (ISymbol filteredSymbol in iterator)
        {
            Console.WriteLine(filteredSymbol.InstancePath);
        }
    }
}

```

4.3 Use of ADS Notifications

If values from a PLC or NC are to be displayed continuously on a user interface, then it is very inefficient to use asynchronous read access, since this function must be called cyclically (polled triggered by a timer). Instead of using a pulling (read) model, ADS Notifications are implementing a push model. That means ADS Notifications are triggered by the sender and form a single or series of ADS messages/events. Together with these ADS Notifications, values can be transmitted. A distinction is drawn between whether the TwinCAT server is to transmit the values cyclically, or only when the values change.

In principle (raw mode) a notification is begun with the registration of the notification [AddDeviceNotificationAsync \[▶ 235\]](#) (asynchronous) or [AddDeviceNotification \[▶ 232\]](#) (synchronous). After this, events are automatically fired by TwinCAT. [DeleteDeviceNotificationAsync \[▶ 254\]](#) (asynchronous) or [DeleteDeviceNotification \[▶ 253\]](#) (synchronous) is used to halt the notification again. Since the number of notifications is limited, you should ensure the notifications no longer required by your program are unregistered/deleted.

There exist several 'modes' for different type of ADS Notification triggers. For a complete list please consult [AdsTransMode \[▶ 740\]](#).

All the following examples demonstrate how to receive ADS Notifications. The .NET ADS API supports different information layers which different levels of ADS Notification support. All are using a PLC variable in the PLC and each time the value of the PLC variable changes, an ADS Notification message is sent and the registered callback method is invoked with event arguments that contain all the necessary information (value, time stamp, ...).

Hint: Don't use time intensive executions or ADS commands inside of your callback (not more than approx. 500). Remind to sync your callback in your main thread (typically the UI thread) if necessary, because the ADS Notifications appear on a background thread.

Using ADS Notifications with Symbolic information

C#

```

private void SymbolValueChanged()
{
    using (AdsClient client = new AdsClient())
    {
        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        Symbol symbol = null;

        try
        {
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
            // DINT Type (UINT32)
            symbol = (Symbol)loader.Symbols["MAIN.nCounter"];

            // Set the Notification Settings of the Symbol if NotificationSettings.Default is not appropriate
            // Check for change every 500 ms
            symbol.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 0);
        }
    }
}

```

```

        symbol.ValueChanged += Symbol_ValueChanged; // Registers the notification
        Thread.Sleep(5000); // Sleep the main thread to get some (asynchronous Notifications)
    }
    finally
    {
        // Unregister the Event and the underlying Handle
        symbol.ValueChanged -= Symbol_ValueChanged; // Unregisters the notification
    }
}

private void Symbol_ValueChanged(object sender, ValueChangedEventArgs e)
{
    Symbol symbol = (Symbol)e.Symbol;

    // Object Value can be cast to int automatically, because it is an Primitive Value (DINT --
    > Int32).
    // The Symbol information is used internally to cast the value to its appropriate .NET Type.
    int iVal = (int)e.Value;

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = iVal.ToString(), null); // Non-blocking post */
}

```

Using ADS Notifications in 'ANYTYPE' style

C#

```

//AdsStream readStream = new AdsStream(sizeof(UInt32));

private void ReceiveNotifications()
{
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event 'Ex' handler
        client.AdsNotificationEx += Client_AdsNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        try
        {
            // Notification to a ZDINT Type (UINT32)
            // Check for change every 200 ms
            notificationHandle = client.AddDeviceNotificationEx("MAIN.nCounter", new NotificationSettings
(AdsTransMode.OnChange, 200, 0), null, typeof(uint));
            Thread.Sleep(5000); // Sleep the main thread to get some (asynchronous Notifications)
        }
        finally
        {
            // Unregister the Event / Handle
            client.DeleteDeviceNotification(notificationHandle);
            client.AdsNotificationEx -= Client_AdsNotification;
        }
    }
}

private void Client_AdsNotification(object sender, AdsNotificationExEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = (uint)e.Value;

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

```

Asynchronous registering of Notifications

Trigger on changed values by ADS Notifications

```
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms

        //byte[] notificationBuffer = new byte[sizeof(UINT32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

Synchronous registering of Notifications

Trigger on changed values by ADS Notifications

```
private void RegisterNotifications()
{
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        try
        {
            // Notification to a DINT Type (UINT32)
            // Check for change every 200 ms

            int size = sizeof(UInt32);
            //byte[] notificationBuffer = new byte[sizeof(UInt32)];

            notificationHandle = client.AddDeviceNotification("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null);
            Thread.Sleep(5000); // Sleep the main thread to get some (asynchronous Notifications)
        }
        finally
        {

```

```

        // Unregister the Event / Handle
        client.DeleteDeviceNotification(notificationHandle);
        client.AdsNotification -= Client_AdsNotification;
    }
}

private void Client_AdsNotification(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UInt32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

```

Using reactive ADS Notifications

C#

```

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

```

4.4 Access Data via Symbolic path

The Read/Write Access by symbol path solves the issue of directly accessing the process image. With specifying the access path to the symbol, the symbol address can be found by a binary search (internally) and reading / writing symbols is independent of the location within the process image.

This access method can only be used, when the ADS device is supporting symbolic information like the TwinCAT PLC.

Because its indirect access, the performance is slightly worse than the direct access via IndexGroup/ IndexOffset. However there are internal optimizations to cache handles to the already used symbols to accelerate repeated access.

Asynchronous access

Access symbolic data by instance/symbol path

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
}

```

```

uint valueToWrite = 42;

client.Connect(AmsNetId.Local, 851);

ResultWrite resultWrite = await client.WriteValueAsync("MAIN.nCounter", valueToWrite, cancel);
ResultValue<uint> resultRead = await client.ReadValueAsync<uint>("MAIN.nCounter",cancel);

if (resultRead.Succeeded)
    valueToRead = resultRead.Value;
}

```

Synchronous access

Access symbolic data by instance/symbol path

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    client.WriteValue("MAIN.nCounter", valueToWrite);
    valueToRead = (uint)client.ReadValue("MAIN.nCounter", typeof(uint));
}

```

4.5 Access Data via Symbol handles

The Read/Write Access by handle solves the issue of directly accessing the process image like the symbol path access. Because the address is accessed indirectly by the symbol path creating a variable handle, the read/write works also when the data object has changed its position within the process image.

However the cost for this are two extra ADS communication roundtrips by the 'CreateVariableHandle' and 'DeleteVariableHandle' calls compared to the IndexGroup/IndexOffset access methods. It is the responsibility of the application code to optimize these accesses.

Asynchronous access

Access symbolic values by handle

```

CancellationToken cancelT = CancellationToken.None;
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851);

    ushort valueToRead = 0; // System.UInt16
    ushort valueToWrite = 42; // System.UInt16

    // Create the Variable Handle
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.testVar", cancel); //
Test Var is defined as PLC INT

    if (resultHandle.Succeeded)
    {
        uint varHandle = 0;

        try
        {
            // Write an UINT16 Value
            byte[] writeData = new byte[sizeof(ushort)];

            MemoryStream writeStream = new MemoryStream(writeData);
            BinaryWriter writer = new BinaryWriter(writeStream);
            writer.Write(valueToWrite); // Marshal the Value
            ResultWrite resultWrite = await client.WriteAsync(varHandle, writeData.AsMemory(), cancelT);

            bool succeeded = resultWrite.Succeeded;

            // Read an UINT16 Value
            byte[] readData = new byte[sizeof(ushort)];
            ResultRead resultRead = await client.ReadAsync(varHandle, readData.AsMemory(), cancel);

            if (resultRead.Succeeded)
            {

```

```

        MemoryStream readStream = new MemoryStream(readData);
        BinaryReader reader = new BinaryReader(readStream);
        valueToRead = reader.ReadUInt16(); // Unmarshal the Value
    }
}
finally
{
    // Unregister VarHandle after Use
    ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
}
}
}

```

Synchronous access

Access symbolic values by handle

```

using (AdsClient client = new AdsClient())
{
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);
    try
    {
        UInt16 valueToRead = 0;
        UInt16 valueToWrite = 42;

        // Create the Variable Handle
        varHandle = client.CreateVariableHandle("MAIN.testVar"); //Test Var is defined as PLC INT

        // Write an UINT16 Value
        byte[] writeData = new byte[sizeof(ushort)];

        MemoryStream writeStream = new MemoryStream(writeData);
        BinaryWriter writer = new BinaryWriter(writeStream);
        writer.Write(valueToWrite); // Marshal the Value
        client.Write(varHandle, writeData.AsMemory());

        // Read an UINT16 Value
        byte[] readData = new byte[sizeof(ushort)];

        MemoryStream readStream = new MemoryStream(readData);
        client.Read(varHandle, readData.AsMemory());
        BinaryReader reader = new BinaryReader(readStream);
        valueToRead = reader.ReadUInt16(); // Unmarshal the Value
    }
    finally
    {
        // Unregister VarHandle after Use
        client.DeleteVariableHandle(varHandle);
    }
}

```

4.6 Value marshalling with ANYTYPE concept

This topic describes reading and writing variables/symbols of 'any' type with the help of the `ReadAny` and `WriteAny` (`ReadSymbol`, `WriteSymbol`) methods. The value will be marshalled / cast directly from/to its appropriate .NET type, what eases the value access.

'Any' types in this context are all types that are 'blittable' to the process image - what means that the memory layout on both sides of the data transfer is equal (e.g some primitive types) or can be marshalled by the marshalling mechanisms of .NET (see 'PlcStruct' in the example below). The memory layout specification can be customized with the 'System.Runtime.InteropServices.StructLayoutAttribute' on the .NET side (see MSDN) and the 'pack_mode' attribute on the TwinCAT PLC Side (TwinCAT 3). TwinCAT 2 only supports a memory layout of `PACK = 1`.

The appropriate .NET type must be known during compile time and is passed to the methods as parameter. In case of a `ReadAny` call, the read data will be returned as a object. The type of the object is marshalled to the type specified as parameter type. Because the data size and the memory alignment is taken from this type specification, it is so important that this specification fits to the memory representation in the ADS device (e.g. the PLC).

Because some data types (arrays and strings) need additional information, an overload of the method `ReadAny` exists, that takes an additional parameter `args`. A Full list of supported types can be found in the documentation of the overloaded method.

Reading and writing of structures

To be able to read or write PLC structures the memory layout of the structure or class in .NET must be the same as in the PLC. The layout of a structure or class can be specified with the attribute `StructLayoutAttribute`. The `LayoutKind` must be set to `LayoutKind.Sequential` and the `pack` must be set to 1

If arrays, strings or boolean values are define the class, one has to specify how these fields should be marshalled. This is accomplished with help of the `MarshalAs` attribute. Because arrays and strings do not have a fixed length in .NET, the property `SizeConst` is necessary for arrays and strings.

Marshalling values with 'ANY_TYPES' asynchronously

```
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851);

    // Bool value
    bool boolValue = false;
    ResultAnyValue resultBoolValue = await client.ReadValueAsync("MAIN.bool1", typeof(bool), cancel);
    boolValue = (bool)resultBoolValue.Value;
    ResultWrite resultWrite = await client.WriteValueAsync("MAIN.bool1", boolValue, cancel);

    // or
    ResultHandle resultHandleBool = await client.CreateVariableHandleAsync("MAIN.bool1", cancel); //
    BOOL
    //resultHandleBool.ThrowOnError(); // or

    if (resultHandleBool.Succeeded)
    {
        ResultAnyValue resultReadBool = await client.ReadAnyAsync(resultHandleBool.Handle, typeof(bo
ol), cancel);
        boolValue = (bool)resultReadBool.Value;
        ResultWrite resultWriteBool = await client.WriteAnyAsync(resultHandleBool.Handle, boolValue,
cancel);
        ResultAds resultHandleDeleteBool = await client.DeleteVariableHandleAsync(resultHandleBool.H
andle, cancel);
    }

    // RealValue
    ResultHandle resultHandleReal = await client.CreateVariableHandleAsync("MAIN.real1", cancel); //
    REAL

    if (resultHandleReal.Succeeded)
    {
        ResultAnyValue resultReadReal = await client.ReadAnyAsync(resultHandleReal.Handle, typeof(fl
oat), cancel); // REAL
        ResultWrite resultWriteReal = await client.WriteAnyAsync(resultHandleReal.Handle, resultRead
Real.Value, cancel);
        ResultAds resultHandleDeleteReal = await client.DeleteVariableHandleAsync(resultHandleReal.H
andle, cancel);
    }

    // String
    ResultHandle resultHandleString = await client.CreateVariableHandleAsync("MAIN.string1", cancel);
    // STRING[80]

    if (resultHandleString.Succeeded)
    {
        ResultAnyValue resultReadString = await client.ReadAnyAsync(resultHandleString.Handle, typeo
f(string), new int[] { 80 }, cancel); // Needs additional para for strlen
        ResultWrite resultWriteString = await client.WriteAnyAsync(resultHandleString.Handle, result
ReadString.Value, new int[] { 80 }, cancel);
        ResultAds resultHandleDeleteString = await client.DeleteVariableHandleAsync(resultHandleStri
ng.Handle, cancel);
    }

    // ushort[]
    ResultHandle resultHandleArray = await client.CreateVariableHandleAsync("MAIN.uint1Arr", cancel)
; // ARRAY [0..9] OF UINT
}
```

```

    if (resultHandleArray.Succeeded)
    {
        ResultAnyValue resultReadArray = await client.ReadAnyAsync(resultHandleArray.Handle, typeof(
ushort[]), new int[] { 10 }, cancel);
        ushort[] arrayValue = (ushort[])resultReadArray.Value;
        ResultWrite resultWriteArray = await client.WriteAnyAsync(resultHandleArray.Handle, arrayVal
ue, new int[] { 10 }, cancel);
        ResultAds resultHandleDeleteArray = await client.DeleteVariableHandleAsync(resultHandleArray
.Handle, cancel);
    }

    // Complex Struct Type
    // Take care the the corresponding .NET Type is blittable / marshallable to the PLC type
    ResultHandle resultHandleStruct = await client.CreateVariableHandleAsync("MAIN.struct",cancel);

    if (resultHandleStruct.Succeeded)
    {
        ResultAnyValue resultReadStruct = await client.ReadAnyAsync(resultHandleStruct.Handle, typeo
f(PlcStruct), cancel);
        PlcStruct structValue = (PlcStruct)resultReadStruct.Value;
        ResultWrite resultWriteStruct = await client.WriteAnyAsync(resultHandleStruct.Handle, struct
Value, cancel);
        ResultAds resultHandleDeleteStruct = await client.DeleteVariableHandleAsync(resultHandleStru
ct.Handle, cancel);
    }

    // ARRAY [0..9] OF STRING[80]
    // args[0] --> Number of Characters
    // args[1] --> Number of Array Elements
    // Needs additional para for strlen and number of Elements in Array
    ResultHandle resultHandleStringArray = await client.CreateVariableHandleAsync("MAIN.stringArr",c
ancel); // ARRAY [0..9] OF STRING[80]

    if (resultHandleStringArray.Succeeded)
    {
        ResultAnyValue resultReadStringArray = await client.ReadAnyAsync(resultHandleStringArray.Han
dle, typeof(string[]), new int[] { 80, 10 }, cancel);
        string[] stringArrValue = (string[])resultReadStringArray.Value;
        ResultWrite resultWriteStringArray = await client.WriteAnyAsync(resultHandleStringArray.Hand
le, stringArrValue, new int[] { 80, 10 }, cancel);
        ResultAds resultHandleDeleteStringArray = await client.DeleteVariableHandleAsync(resultHandl
eStringArray.Handle, cancel);
    }
}

```

Defining Memory layout of struct type.

```

// Attention: Dependent of the System where the PLC runs, the StructLayout of the exchanged
// Structures must match. With the ANY_TYPE concept this is realized with 'blittable' objects,
// that match on .NET and PLC side.

// Default Pack Modes:

// TC3 I64/x86: Normal, in this case Pack = 8
// TC2 x86:      Pack = 1

// On TC3 PLC side we can force the packing of structures with the attribute
// {attribute 'pack_mode' := '1'}, see also 'pack_mode' attribute in Beckhoff InfoSystem
// For TC2 is the Pack setting Pack = 1 the only possible way, because it is not selectable.

// We have to ensure that the pack mode on both sides is equal!

[StructLayout(LayoutKind.Sequential, Pack = 1, CharSet = CharSet.Ansi)]
public struct PlcStruct
{
    // Type must be 'blittable' to the corresponding PLC Struct Type
    // See MSDN for MarshalAs and Default Marshalling.

    [MarshalAs(UnmanagedType.I1)]
    public bool boolVal; // BOOL
    public byte byteVal; // BYTE
    public ushort ushortVal; // UINT
    public short shortVal; // INT
    public uint uintVal; // UDINT
    public int dintVal; // DINT
    public uint udintVal; // UDINT
    public float realVal; // REAL
    public double lrealVal; // LREAL
    [MarshalAs(UnmanagedType.ByValTStr, SizeConst = 81)]

```

```

public string stringVal; // STRING[80]

[MarshalAs(UnmanagedType.U4)]
public uint timeVal; // TIME
[MarshalAs(UnmanagedType.U4)]
public uint todVal; // TOD
[MarshalAs(UnmanagedType.U4)]
public uint dateVal; // DATE
[MarshalAs(UnmanagedType.U4)]
public uint dtVal; // DT
}

```

Marshalling values with 'ANY_TYPES' (synchronous)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851);

    // Bool value
    bool boolValue = (bool)client.ReadValue("MAIN.bool1", typeof(bool));
    client.WriteValue("MAIN.bool1", boolValue);

    // or
    uint handleBool = client.CreateVariableHandle("MAIN.bool1"); // BOOL
    boolValue = (bool)client.ReadAny(handleBool, typeof(bool));
    client.WriteAny(handleBool, boolValue);
    client.DeleteVariableHandle(handleBool);

    // RealValue
    uint handleReal = client.CreateVariableHandle("MAIN.real1"); // REAL
    float realValue = (float)client.ReadAny(handleReal, typeof(float));
    client.WriteAny(handleReal, realValue);
    client.DeleteVariableHandle(handleReal);

    // String
    uint handleString = client.CreateVariableHandle("MAIN.string1"); // STRING[80]
    string stringValue = (string)client.ReadAny(handleString, typeof(string), new int[] { 80 }); //
Needs additional para for strlen
    client.WriteAny(handleString, stringValue, new int[] { 80 });
    client.DeleteVariableHandle(handleString);

    // ushort[]
    uint handleArray = client.CreateVariableHandle("MAIN.uint1Arr"); // ARRAY [0..9] OF UINT
    ushort[] arrayValue = (ushort[])client.ReadAny(handleArray, typeof(ushort[]), new int[] { 10 });
    client.WriteAny(handleArray, arrayValue, new int[] { 10 });
    client.DeleteVariableHandle(handleArray);

    // Complex Struct Type
    // Take care the the corresponding .NET Type is blittable / marshallable to the PLC type
    uint handleStruct = client.CreateVariableHandle("MAIN.struct");
    PlcStruct structValue = (PlcStruct)client.ReadAny(handleStruct, typeof(PlcStruct));
    client.WriteAny(handleStruct, structValue);
    client.DeleteVariableHandle(handleStruct);

    // ARRAY [0..9] OF STRING[80]
    // args[0] --> Number of Characters
    // args[1] --> Number of Array Elements
    // Needs additional para for strlen and number of Elements in Array
    uint handleStringArr = client.CreateVariableHandle("MAIN.stringArr"); // ARRAY [0..9] OF STRING[
80]
    string[] stringArr = (string[])client.ReadAny(handleStringArr, typeof(string[]), new int[] { 80,
10 });
    client.WriteAny(handleStringArr, stringArr, new int[] { 80, 10 });
    client.DeleteVariableHandle(handleStringArr);
}

```

ADS Notifications with Type marshalling (AdsNotificationEx)

The method `AddDeviceNotificationEx` is used to register notifications for a PLC variable. If the value of a variable changes the event `AdsNotificationEx` is fired. The difference to the event `AdsNotification`, is that the value of the variable is stored in an object instead of in an `AdsStream`. Therefore one has to pass the type of the object to the method `AddDeviceNotificationEx`

Notifications with 'ANY_TYPES' (asynchronous)

```

CancellationToken cancel = CancellationTokens.None;

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ...
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}

```

Notifications with 'ANY_TYPES'

```

private void Client_AdsNotificationEx(object sender, AdsNotificationExEventArgs e)
{
    uint value = (uint)e.Value; // Marshalled value as .NET Type
}

```

Notifications with 'ANY_TYPES' (synchronous)

```

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    uint notificationHandle = client.AddDeviceNotificationEx("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint));
    Thread.Sleep(5000); // ...
    client.DeleteDeviceNotification(notificationHandle); // Unregister Event
}

```

4.7 Access Data via Symbol Loader

Some ADS Devices (e.g. the TwinCAT PLC) provide symbolic information for download. That means all visible Symbols and DataTypes can be retrieved from the target system. While this needs an extra effort to upload and hold the data, this feature helps to remove the dependency of the code/configuration running on the target device.

E.g. because the symbolic information can now be browsed and determined during runtime, the application can be written without knowing what's running on the target system. Even more having the Symbol information cached, the access of the process image data will be easier because the datasize and access (instance path) is stored in the symbol.

Dependent how it is parametrized, the symbol loader can work with 'ANY_TYPES' (marshallable Primitive types, [Value marshalling with ANYTYPE concept \[► 31\]](#)) or full dynamic symbols ([Automatic dynamic marshalling of values \[► 36\]](#)).

Example**Accessing symbolic data by preloaded Symbolic information (asynchronous)**

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationTokens.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);

    if (resultSymbols.Succeeded)

```

```

    {
        Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];

        // Works for ALL Primitive 'ANY TYPES' Symbols
        ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
        ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);

        if (resultRead.Succeeded)
            valueToRead = (uint)resultRead.Value;

        // Simple filtering of Symbols
        Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"

        // FilterFunction that filters for the InstancePath
        Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
        SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true,
selector: filter);

        foreach (ISymbol filteredSymbol in iterator)
        {
            Console.WriteLine(filteredSymbol.InstancePath);
        }
    }
}

```

Accessing symbolic data by preloaded Symbolic information (synchronous)

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    Symbol symbol = (Symbol)loader.Symbols["MAIN.nCounter"];

    // Works for ALL Primitive 'ANY TYPES' Symbols
    symbol.WriteValue(valueToWrite);
    valueToRead = (uint)symbol.ReadValue();

    // Simple filtering of Symbols
    Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"

    // FilterFunction that filters for the InstancePath
    Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
    SymbolIterator iterator = new SymbolIterator(symbols: loader.Symbols, recurse: true, selector: filter);

    foreach (ISymbol filteredSymbol in iterator)
    {
        Console.WriteLine(filteredSymbol.InstancePath);
    }
}

```

4.8 Automatic dynamic marshalling of values

The 'Dynamic Symbol Loader' of the .NET ADS Communication API makes use of the .NET dynamic language runtime (DLR). The dynamic language runtime is a runtime environment that adds a set of services for dynamic languages to the common language runtime (CLR). The DLR makes it easier to develop dynamic languages to run on the .NET Framework and to add dynamic features to statically typed languages.

Dynamic languages can identify the type of an object at run time, whereas in statically typed languages (without using the 'dynamic' keyword, specify object types at design time. The advantage here is - from the moment on the symbolic (and dataType) information is available from the ADS Device - Symbol/Variable values can be marshalled 'on-the-fly' during runtime in a type-safe manner.

This works not only with primitive types but also with complex types. This reduces the complexity of the written application code to access the values, because neither the type of the data must be known, nor how the value data must be marshalled from/to the process image. The price to be paid is simply that the full symbolic information and data types must be downloaded from the ADS Device by the symbol loader.

Example

Automatic marshalling values with 'Dynamic Values' (asynchronous)

```
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    //dynamic symbols = loader.SymbolsDynamic;
    ResultDynamicSymbols resultSymbols = await loader.GetDynamicSymbolsAsync(cancel);

    if (resultSymbols.Succeeded)
    {
        dynamic symbols = resultSymbols.Symbols;
        dynamic main = symbols.Main;

        // Use typed object to use InfoTips
        DynamicSymbol nCounter = main.nCounter; // UDINT

        // or to be fullDynamic
        dynamic nCounter2 = main.nCounter;

        // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
        ResultReadValueAccess resultRead = await nCounter.ReadValueAsync(cancel);

        if (resultRead.Succeeded)
        {
            valueToRead = (uint)resultRead.Value;

            // or
            var varValue = resultRead.Value;
            // or
            dynamic dynValue = resultRead.Value;
        }
        // Same for writing
        ResultWriteAccess resultWrite = await nCounter.WriteValueAsync(valueToWrite, cancel);

        // Or Notifications / Events (typed dynamically)
        nCounter.ValueChanged += NCounter_ValueChanged;

        //Reading complexTypes e.g. Struct

        DynamicSymbol myStructSymbol = main.plcStruct; // Dynamically created
        ResultReadValueAccess resultRead2 = await myStructSymbol.ReadValueAsync(cancel); // Takes an ADS Snapshot of the value

        if (resultRead2.Succeeded)
        {
            dynamic myStructVal = resultRead2.Value;

            dynamic int1Val = myStructVal.int1; // Value to an INT (short)
            dynamic valueNestedStruct = myStructVal.nestedStruct; //
value to another complex type (here a nested Struct)
        }
        myStructSymbol.ValueChanged += MyStructSymbol_ValueChanged;
        //wait 5 seconds to get some events
        Thread.Sleep(5000);
    }
}
```

Automatic marshalling values with 'Dynamic Values' (handler)

```
private void NCounter_ValueChanged(object sender, ValueChangedEventArgs e)
{
    var uintVal = e.Value;
}

private void MyStructSymbol_ValueChanged(object sender, ValueChangedEventArgs e)
```

```
{
    dynamic structValue = e.Value; // Snapshot of the whole Struct and all its contents
}
```

Automatic marshalling values with 'Dynamic Values' (synchronous)

```
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    dynamic symbols = loader.SymbolsDynamic;
    dynamic main = symbols.Main;

    // Use typed object to use InfoTips
    DynamicSymbol nCounter = main.nCounter; // UDINT

    // or to be fullDynamic
    //dynamic nCounter = main.nCounter;

    // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
    valueToRead = (uint)nCounter.ReadValue();
    // or
    var varValue = nCounter.ReadValue();
    // or
    dynamic dynValue = nCounter.ReadValue();

    // Same for writing
    nCounter.WriteValue(valueToWrite);

    // Or Notifications / Events
    nCounter.ValueChanged += new EventHandler<ValueChangedEventArgs>(NCounter_ValueChanged);

    //Reading complexTypes e.g. Struct

    DynamicSymbol myStructSymbol = main.plcStruct; // Dynamically created
    dynamic myStructVal = myStructSymbol.ReadValue(); // Takes an ADS Snapshot of the value

    dynamic int1Val = myStructVal.int1; // Value to an INT (short)
    dynamic valueNestedStruct = myStructVal.nestedStruct; //
    value to another complex type (here a nested Struct)

    myStructSymbol.ValueChanged += new EventHandler<ValueChangedEventArgs>(MyStructSymbol_ValueChanged);
    //wait for notifications for 5 seconds
    Thread.Sleep(5000);
}
```

Calling 'ReadValue'/'ReadValueAsync' or the incoming 'ValueChanged' notification takes a full snapshot (with snapshot time) of the value. That means, when for example subelements of a struct value will be accessed, all subvalues will represent the value of that snapshot time consistently. The starting point (or the instance that caches the consistent data) is always the 'DynamicSymbol' object that called 'ReadValue'.

An update of the value can be done directly on the value with 'UpdateValue', or with reading a new Value on the 'DynamicSymbol' ('ReadValue').

The 'ValueChanged' event on the 'DynamicSymbol' assigns a Notification for just this symbol. The 'ValueChanged' handler will contain the value completely marshalled as dynamic object.

4.9 Reactive Extensions and ADS

The Reactive Extensions (Rx) is a .NET library for composing asynchronous and event-based programs using observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ + Schedulers.

In ADS terms, not only the reading and writing data or symbol values can be put into reactive data streams, also ADS Notifications are a perfect fit for reactive code. This eases not only data binding to reactive frameworks (e.g. reactive UI) but also supports enhanced data manipulation via synchronous and asynchronous observers. Multithreaded and parallelized code paths that support multiple CPU cores can be written very easily without the burden of deadlock and synchronization issues.

More about .NET reactive extensions can be read here: [Reactive extensions project site](#).

The TwinCAT ADS Reactive extensions are available via a supplement Nuget Package: [Beckhoff.TwinCAT.Ads.Reactive Nuget Package](#)

Example

Observe for Notifications

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    }
    );

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Observe for Symbol Notifications

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    }
    );

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Observer for dynamic Symbol Notifications

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));
```

```

    // Create Symbol information
    var symbolLoader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings
.DefaultDynamic);
    dynamic symbols = symbolLoader.SymbolsDynamic;
    dynamic cycleCount = symbols.TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        // Value objects can be dynamically (on the fly) created objects here (e.g. structs)
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.To
String()));
    }
    );

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); //
optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    // We have to give the 'hint' about IValueSymbol here, that the CLR finds the Extension Method '
WhenValueChanged' during runtime.
    IDisposable subscription = ((IValueSymbol)cycleCount).WhenValueChanged().Take(20).Subscribe(valu
eObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

```

Polling observer

```

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf
o.CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.To
String()));
    }
    );

    // Take 20 Values in an Interval of 500ms
    IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscr
ibe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

```

Writing values with observable subject

```

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"];

    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i =>
(object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));
}

```

```
Console.ReadKey(); // Wait for Key press  
dispose.Dispose(); // Dispose the Subscription  
}
```

5 HowTo Samples

The topics in this section describe the various changes made to the 'TwinCAT.Ads .NET API' over the life of the project.

HowTo

How to use the .NET TwinCAT API

Sample	Description
Reading/writing (simple) values from/to ADS Servers.	Read/Write values [▶ 42]
Reading/writing string values.	Read/Write string values [▶ 46]
Event driven reading (ADS Notifications)	Event driven reading [▶ 52]
Read/Write data from/to ADS Servers using reactive extensions	Reactive Read/Write [▶ 54]
Upgrading existing ADS Application code (Version 4.X --> 6.X)	Upgrade 4.X --> 6.X [▶ 56]

Other Resources

[TwinCAT ADS .NET API Documentation \[▶ 16\]](#)

5.1 Read/Write primitive values

Reading writing Values from ADS Devices is the most essential part of the communication API. There are several options for communication with your application.

- Accessing by IndexGroup / IndexOffset
- Symbolic access by instance path and optionally use handles for the symbol
- Holding the overall Symbolic information in the SymbolLoader and use easy access via symbol objects.
- Usage the symbolic interface ITcAdsSymbol when complete SymbolLoading by SymbolLoaders is not appropriate.
- Reading / Writing values as .NET managed Types (primitive types or compound primitive types called ANY_TYPES), or complex dynamic types typesafe generated at runtime.

The following section shows the different scenarios as code snippets.

HowTo Read/Write Values

Read/Write AnyType by IndexGroup/IndexOffset (asynchronously)

```
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    ResultWrite resultWrite = await client.WriteAnyAsync(0x4020, 0x0, valueToWrite, cancel);
    bool succeeded = resultWrite.Succeeded;

    ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(0x4020, 0x0, cancel);

    if (resultRead.Succeeded)
    {
```

```

    valueToRead = (uint)resultRead.Value;
}
}

```

Read/Write AnyType by IndexGroup/IndexOffset (synchronously)

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    client.WriteAny(0x4020, 0x0, valueToWrite);
    valueToRead = (uint)client.ReadAny(0x4020, 0x0, typeof(uint));
}

```

Read/Write AnyType by variable handle (asynchronously)

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);

    uint valueToRead = 0;
    uint valueToWrite = 42;

    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.nCounter", cancel);
    varHandle = resultHandle.Handle;

    if (resultHandle.Succeeded)
    {
        try
        {
            ResultWrite resultWrite = await client.WriteAnyAsync(varHandle, valueToWrite, cancel);
            ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(varHandle, cancel);

            if (resultRead.Succeeded)
                valueToRead = resultRead.Value;
        }
        finally
        {
            // Unregister VarHandle after Use
            ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
        }
    }
}

```

Read/Write AnyType by variable handle (synchronously)

```

using (AdsClient client = new AdsClient())
{
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);
    try
    {
        uint valueToRead = 0;
        uint valueToWrite = 42;

        varHandle = client.CreateVariableHandle("MAIN.nCounter");
        client.WriteAny(varHandle, valueToWrite);
        valueToRead = (uint)client.ReadAny(varHandle, typeof(uint));
    }
    finally
    {
        // Unregister VarHandle after Use
        client.DeleteVariableHandle(varHandle);
    }
}

```

Read/Write AnyType by instance/symbol path (asynchronously)

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
}

```

```

ResultWrite resultWrite = await client.WriteValueAsync("MAIN.nCounter", valueToWrite, cancel);
ResultValue<uint> resultRead = await client.ReadValueAsync<uint>("MAIN.nCounter",cancel);

if (resultRead.Succeeded)
    valueToRead = resultRead.Value;
}

```

Read/Write AnyType by instance/symbol path (synchronously)

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    client.WriteValue("MAIN.nCounter", valueToWrite);
    valueToRead = (uint)client.ReadValue("MAIN.nCounter", typeof(uint));
}

```

Read/Write AnyType by IAdsSymbol (asynchronously)

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    ResultValue<IAdsSymbol> resultSymbol = await client.ReadSymbolAsync("MAIN.nCounter",cancel);

    if (resultSymbol.Succeeded)
    {
        ResultWrite resultWrite = await client.WriteValueAsync(resultSymbol.Value, valueToWrite, cancel)
;
        bool succeeded = resultWrite.Succeeded;

        ResultValue<uint> resultValue = await client.ReadValueAsync<uint>(resultSymbol.Value, cancel);

        if (resultValue.Succeeded)
            valueToRead = resultValue.Value;
    }
}

```

Read/Write AnyType by IAdsSymbol (synchronously)

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    IAdsSymbol symbol = client.ReadSymbol("MAIN.nCounter");
    client.WriteValue(symbol, valueToWrite);
    valueToRead = (uint)client.ReadValue(symbol);
}

```

Read/Write AnyType by SymbolBrowser (asynchronously)

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);

    if (resultSymbols.Succeeded)
    {
        Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];
    }
}

```

```

// Works for ALL Primitive 'ANY TYPES' Symbols
ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);

if (resultRead.Succeeded)
    valueToRead = (uint)resultRead.Value;

// Simple filtering of Symbols
Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"

// FilterFunction that filters for the InstancePath
Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true, selector: filter);

foreach (ISymbol filteredSymbol in iterator)
{
    Console.WriteLine(filteredSymbol.InstancePath);
}
}

```

Read/Write AnyType by SymbolBrowser (synchronously)

```

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    Symbol symbol = (Symbol)loader.Symbols["MAIN.nCounter"];

    // Works for ALL Primitive 'ANY TYPES' Symbols
    symbol.WriteValue(valueToWrite);
    valueToRead = (uint)symbol.ReadValue();

    // Simple filtering of Symbols
    Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"

    // FilterFunction that filters for the InstancePath
    Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
    SymbolIterator iterator = new SymbolIterator(symbols: loader.Symbols, recurse: true, selector: filter);

    foreach (ISymbol filteredSymbol in iterator)
    {
        Console.WriteLine(filteredSymbol.InstancePath);
    }
}

```

Read/Write dynamic types by SymbolBrowser (asynchronously)

```

using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;

    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    //dynamic symbols = loader.SymbolsDynamic;
    ResultDynamicSymbols resultSymbols = await loader.GetDynamicSymbolsAsync(cancel);
    if (resultSymbols.Succeeded)
    {
        dynamic symbols = resultSymbols.Symbols; // Symbols collection with 'dynamic' access.
        dynamic main = symbols.Main; // Get the 'dynamic' main FB as Property

        // Use typed object to use InfoTips instead of 'dynamic'
        DynamicSymbol nCounter = main.nCounter;
    }
}

```

```
// or to be fullDynamic
dynamic nCounter2 = main.nCounter;

// Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
ResultWriteAccess resultWrite = await nCounter.WriteValueAsync(valueToWrite, cancel);
ResultReadValueAccess resultRead = await nCounter.ReadValueAsync(cancel);

if (resultRead.Succeeded)
{
    // Because the PLC value is defined as UDINT (32-Bit)
    // We get back an already Marshalled UInt32 here ...
    valueToRead = (uint)resultRead.Value;
}
}
```

Read/Write dynamic types by SymbolBrowser (synchronously)

```
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    dynamic symbols = loader.SymbolsDynamic;
    dynamic main = symbols.Main;

    // Use typed object to use InfoTips
    DynamicSymbol nCounter = main.nCounter;

    // or to be fullDynamic
    //dynamic nCounter = main.nCounter;

    // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
    nCounter.WriteValue(valueToWrite);
    valueToRead = (uint)nCounter.ReadValue();
}
}
```

5.2 Read/Write string types

ADS Server usually support strings in 2 flavors. The Default (ANSI) and the Unicode encoding (STRING vs. WSTRING) The ANSI encoding reserves 1 byte per character. Unicode reserves 2.

The strings are of fixed size and therefore the length of the the reserved space within the process image is important.

HowTo Read/Write string values

Reading writing ANSI Streams:

Read/Write ANSI Strings (async)

```
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)

    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.string", cancel); // Symbol "string" in MAIN defined as string

    if (resultHandle.Succeeded)
    {
        try
        {
            // Read ANSI String string[80]
            int byteSize = 81; // Size of 80 ANSI chars + /0 (STRING[80])
            PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(StringMarshaler.DefaultEncoding);
        }
    }
}
}
```

```

        byte[] buffer = new byte[byteSize];

        ResultRead resultRead = await client.ReadAsync(resultHandle.Handle, buffer.AsMemory(), cancel);

        if (resultRead.Succeeded)
        {
            string value = null;
            converter.Unmarshal<string>(buffer.AsSpan(), out value);

            byte[] writeBuffer = new byte[byteSize];
            // Write ANSI String string[80]
            value = "Changed";
            converter.Marshal(value, writeBuffer);
            ResultWrite resultWrite = await client.WriteAsync(resultHandle.Handle, writeBuffer, cancel);
        }
    }
    finally
    {
        ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandle.Handle, cancel);
    }
}

```

Read/Write ANSI Strings (sync)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    uint handle = client.CreateVariableHandle("MAIN.string"); // Symbol "string" in MAIN defined as string

    try
    {
        // Read ANSI String string[80]
        int byteSize = 81; // Size of 80 ANSI chars + /0 (STRING[80])
        PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(StringMarshaler.DefaultEncoding);
        byte[] buffer = new byte[byteSize];

        int readBytes = client.Read(handle, buffer.AsMemory());

        string value = null;
        converter.Unmarshal<string>(buffer.AsSpan(), out value);

        // Write ANSI String string[80]
        byte[] writeBuffer = new byte[byteSize];
        value = "Changed";
        converter.Marshal(value, writeBuffer);
        client.Write(handle, writeBuffer);
    }
    finally
    {
        client.DeleteVariableHandle(handle);
    }
}

```

Reading writing UNICODE Streams:

Read/Write Unicode Strings (async)

```

CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.wstring", cancel); // Symbol "wstring" defined in MAIN as WSTRING

    if (resultHandle.Succeeded)
    {
        try
        {
            // Read UNICODE String wstring[80]
            PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(Encoding.Unicode);
            int byteSize = converter.MarshalSize(80); // Size of 80 UNICODE chars + /0 (WSTRING[80]) (162)
            byte[] readBuffer = new byte[byteSize];

            ResultRead resultRead = await client.ReadAsync(resultHandle.Handle, readBuffer, cancel);
        }
    }
}

```

```

        if (resultRead.Succeeded)
        {
            string value = null;
            converter.Unmarshal(readBuffer.AsSpan(), out value);

            // Write Unicode String string[80]
            value = "Changed";
            byte[] writeBuffer = new byte[byteSize];
            converter.Marshal(value, writeBuffer.AsSpan());

            ResultWrite resultWrite = await client.WriteAsync(resultHandle.Handle, writeBuffer.AsMemory(
), cancel);
        }
    }
    finally
    {
        {
            ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandle.Handle, cancel);
        }
    }
}

```

Read/Write Unicode Strings (sync)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    uint handle = client.CreateVariableHandle("MAIN.wstring"); // Symbol "wstring" defined in MAIN as WSTRING

    try
    {
        // Read UNICODE String wstring[80]

        PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(Encoding.Unicode);
        int byteSize = converter.MarshalSize(80); // Size of 80 UNICODE chars + /0 (WSTRING[80]) (162)
        byte[] readBuffer = new byte[byteSize];

        int readBytes = client.Read(handle, readBuffer);

        string value = null;
        converter.Unmarshal(readBuffer.AsSpan(), out value);

        // Write Unicode String string[80]
        value = "Changed";
        byte[] writeBuffer = new byte[byteSize];
        converter.Marshal(value, writeBuffer.AsSpan());

        client.Write(handle, writeBuffer.AsMemory());
    }
    finally
    {
        client.DeleteVariableHandle(handle);
    }
}

```

Reading writing strings with ReadAny/WriteAny group of methods:

Read/Write Anystring (async)

```

Cancellation token cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)

    ResultHandle resultHandleStr = await client.CreateVariableHandleAsync("MAIN.string", cancel); //
Symbol "string" defined in MAIN as STRING
    ResultHandle resultHandleWStr = await client.CreateVariableHandleAsync("MAIN.wstring", cancel); /
/ Symbol "wstring" defined in MAIN as WSTRING

    if (resultHandleStr.Succeeded && resultHandleWStr.Succeeded)
    {
        try
        {
            ResultAnyValue resultReadStr = await client.ReadAnyStringAsync(resultHandleStr.Handle, 80, S
tringMarshaler.DefaultEncoding, cancel);
            ResultAnyValue resultReadWStr = await client.ReadAnyStringAsync(resultHandleWStr.Handle, 80,
Encoding.Unicode, cancel);

```

```

        string changedValue = "Changed";

        // Attention, take care that the memory of the string in the process image is not exceeded!
        ResultWrite resultWriteStr = await client.WriteAnyStringAsync(resultHandleStr.Handle, change
dValue, 80, StringMarshaler.DefaultEncoding, cancel);
        ResultWrite resultWriteWStr = await client.WriteAnyStringAsync(resultHandleWStr.Handle, chan
gedValue, 80, Encoding.Unicode, cancel);
    }
    finally
    {
        ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleStr.Handle, cancel);
        ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleWStr.Handle, cancel);
    }
}
}

```

Read/Write Anystring (sync)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)

    uint stringHandle = client.CreateVariableHandle("MAIN.string"); // Symbol "string" defined in MA
IN as STRING
    uint wStringHandle = client.CreateVariableHandle("MAIN.wstring"); // Symbol "string" defined in
MAIN as WSTRING

    try
    {
        string str = client.ReadAnyString(stringHandle, 80, StringMarshaler.DefaultEncoding);
        string wStr = client.ReadAnyString(wStringHandle, 80, Encoding.Unicode);

        string changedValue = "Changed";

        // Attention, take care that the memory of the string in the process image is not exceeded!
        client.WriteAnyString(stringHandle, changedValue, 80, StringMarshaler.DefaultEncoding);
        client.WriteAnyString(wStringHandle, changedValue, 80, Encoding.Unicode);
    }
    finally
    {
        client.DeleteVariableHandle(stringHandle);
        client.DeleteVariableHandle(wStringHandle);
    }
}

```

5.3 Read/Write PlcOpen types (DATE, TIME ...)

The following PLCOpen types have specific representations within the TwinCAT.Ads Communication Library:
[DT \[▶ 2034\]](#)

- [DT \[▶ 2034\]](#)
- [DATE \[▶ 2016\]](#)
- [TIME \[▶ 2061\]](#)
- [LTIME \[▶ 2045\]](#)
- [TOD \[▶ 2077\]](#)

The following section shows the different scenarios as code snippets.

HowTo Read/Write PlcOpen values

Reading writing by streams:

Read/Write PlcOpen types (streamed, async)

```

Cancellation token cancel = Cancellation token.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

```

```

    ResultHandle resultHandleTime = await client.CreateVariableHandleAsync("MAIN.time", cancel); //
TIME
    ResultHandle resultHandleLTime = await client.CreateVariableHandleAsync("MAIN.lTime", cancel); /
/ LTIME
    ResultHandle resultHandleDate = await client.CreateVariableHandleAsync("MAIN.date", cancel); //
DATE

    if (resultHandleTime.Succeeded && resultHandleLTime.Succeeded && resultHandleDate.Succeeded)
    {
        try
        {
            byte[] readBuffer = new byte[LTIME.MarshalSize]; // Largest PlcOpen Type is 8 Bytes
            byte[] writeBuffer = new byte[LTIME.MarshalSize];

            // Reading raw value TIME
            await client.ReadAsync(resultHandleTime.Handle, readBuffer.AsMemory(0, TIME.MarshalSize), ca
ncel);

            // Unmarshalling
            TIME plcTime = null;
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, TIME.MarshalSize), out plcTime
);
            TimeSpan time = plcTime.Time;

            // Writing raw value TIME
            PrimitiveTypeMarshaler.Default.Marshal(time, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleTime.Handle, writeBuffer.AsMemory(0, TIME.MarshalSize),
cancel);

            // Reading raw value LTIME
            await client.ReadAsync(resultHandleLTime.Handle, readBuffer.AsMemory(0, LTIME.MarshalSize),
cancel);

            // Unmarshalling
            LTIME plcLTime = null;
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, LTIME.MarshalSize), out plcLTi
me);
            TimeSpan lTime = plcLTime.Time;

            // Writing raw value LTIME
            PrimitiveTypeMarshaler.Default.Marshal(lTime, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleLTime.Handle, writeBuffer.AsMemory(0, LTIME.MarshalSize)
, cancel);

            // Reading raw value DATE
            DATE plcDate = null;
            await client.ReadAsync(resultHandleDate.Handle, readBuffer.AsMemory(0, DATE.MarshalSize), ca
ncel);

            // Unmarshalling
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, DATE.MarshalSize), out plcDate
);
            DateTimeOffset dateTime = plcDate.Date;

            // Writeing raw value DATE
            PrimitiveTypeMarshaler.Default.Marshal(plcDate, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleDate.Handle, writeBuffer.AsMemory(0, DATE.MarshalSize),
cancel);
        }
        finally
        {
            ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleLTime.Handle, cancel);
            ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleTime.Handle, cancel);
            ResultAds r3 = await client.DeleteVariableHandleAsync(resultHandleDate.Handle, cancel);
        }
    }
}

```

Read/Write PlcOpen types (streamed, sync)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    uint handleTime = 0;
    uint handleLTime = 0;
    uint handleDate = 0;

    try
    {

```

```

handleTime = client.CreateVariableHandle("MAIN.time"); // TIME
handleLTime = client.CreateVariableHandle("MAIN.lTime"); // LTIME
handleDate = client.CreateVariableHandle("MAIN.date"); // DATE

byte[] readBuffer = new byte[LTIME.MarshalSize]; // Largest PlcOpen Type is 8 Bytes
byte[] writeBuffer = new byte[LTIME.MarshalSize];

// Reading raw value TIME
client.Read(handleTime, readBuffer.AsMemory(0, TIME.MarshalSize));

// Unmarshalling
TIME plcTime = null;
PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, TIME.MarshalSize), out plcTime);
TimeSpan time = plcTime.Time;

// Writing raw value TIME
PrimitiveTypeMarshaler.Default.Marshal(time, writeBuffer.AsSpan());
client.Write(handleTime, writeBuffer.AsMemory(0, TIME.MarshalSize));

// Reading raw value LTIME
client.Read(handleLTime, readBuffer.AsMemory(0, LTIME.MarshalSize));

// Unmarshalling
LTIME plcLTime = null;
PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, LTIME.MarshalSize), out plcLTime);
TimeSpan lTime = plcLTime.Time;

// Writing raw value LTIME
PrimitiveTypeMarshaler.Default.Marshal(lTime, writeBuffer.AsSpan());
client.Write(handleLTime, writeBuffer.AsMemory(0, LTIME.MarshalSize));

// Reading raw value DATE
DATE plcDate = null;
client.Read(handleDate, readBuffer.AsMemory(0, DATE.MarshalSize));

// Unmarshalling
PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, DATE.MarshalSize), out plcDate);
DateTimeOffset dateTime = plcDate.Date;

// Writeing raw value DATE
PrimitiveTypeMarshaler.Default.Marshal(plcDate, writeBuffer.AsSpan());
client.Write(handleDate, writeBuffer.AsMemory(0, DATE.MarshalSize));
}
finally
{
client.DeleteVariableHandle(handleLTime);
client.DeleteVariableHandle(handleTime);
client.DeleteVariableHandle(handleDate);
}
}

```

Reading writing by ANY type concept:

Read/Write PlcOpen types (ANY, async)

```

CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    ResultHandle resultHandleTime = await client.CreateVariableHandleAsync("MAIN.time", cancel); // T
IME
    ResultHandle resultHandleDate = await client.CreateVariableHandleAsync("MAIN.date", cancel); //
DATE
    ResultHandle resultHandleLTime = await client.CreateVariableHandleAsync("MAIN.lTime", cancel); /
/ LTIME

    if (resultHandleTime.Succeeded && resultHandleDate.Succeeded && resultHandleLTime.Succeeded)
    {
        try
        {
            ResultAnyValue resultTime = await client.ReadAnyAsync(resultHandleTime.Handle, typeof(TIME),
cancel); // TIME

            TIME time = (TIME)resultTime.Value;
            TimeSpan timeSpan = time.Time;

            await client.WriteAnyAsync(resultHandleTime.Handle, time, cancel);

```

```

        ResultAnyValue resultData = await client.ReadAnyAsync(resultHandleDate.Handle, typeof(DATE),
cancel); // DATE
        DATE date = (DATE)resultTime.Value;
        DateTimeOffset dateTime = date.Date;

        await client.WriteAnyAsync(resultHandleDate.Handle, date, cancel);

        ResultAnyValue resultLTime = await client.ReadAnyAsync(resultHandleLTime.Handle, typeof(LTIME
E), cancel); // LTIME
        LTIME lTime = (LTIME)resultTime.Value;
        TimeSpan lTimeSpan = lTime.Time;

        await client.WriteAnyAsync(resultHandleLTime.Handle, lTime, cancel);
    }
    finally
    {
        ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleTime.Handle, cancel);
        ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleDate.Handle, cancel);
        ResultAds r3 = await client.DeleteVariableHandleAsync(resultHandleLTime.Handle, cancel);
    }
}

```

Read/Write PlcOpen types (ANY, sync)

```

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    uint handleTime = 0;
    uint handleDate = 0;
    uint handleLTime = 0;

    try
    {
        handleTime = client.CreateVariableHandle("MAIN.time"); // TIME
        handleDate = client.CreateVariableHandle("MAIN.date"); // DATE
        handleLTime = client.CreateVariableHandle("MAIN.lTime"); // LTIME

        TIME time = (TIME)client.ReadAny(handleTime, typeof(TIME)); // TIME
        TimeSpan timeSpan = time.Time;
        client.WriteAny(handleTime, time);

        DATE date = (DATE)client.ReadAny(handleDate, typeof(DATE)); // DATE
        DateTimeOffset dateTime = date.Date;
        client.WriteAny(handleDate, date);

        LTIME ltime = (LTIME)client.ReadAny(handleLTime, typeof(LTIME)); // LTIME
        TimeSpan lTimeSpan = ltime.Time;
        client.WriteAny(handleLTime, ltime);
    }
    finally

        client.DeleteVariableHandle(handleTime);
        client.DeleteVariableHandle(handleDate);
        client.DeleteVariableHandle(handleLTime);
    }
}

```

5.4 Event driven read with ADS Notifications

Use of ADS Notifications (Async)

Trigger on changed values by ADS Notifications

```

private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
    }
}

```

```

client.Connect(AmsNetId.Local, 851);
uint notificationHandle = 0;

// Notification to a DINT Type (UINT32)
// Check for change every 200 ms

//byte[] notificationBuffer = new byte[sizeof(UInt32)];
int size = sizeof(UInt32);

ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

if (result.Succeeded)
{
    notificationHandle = result.Handle;
    await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
    // Unregister the Event / Handle
    ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
}
client.AdsNotification -= Client_AdsNotification2;
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

```

Use of ADS Notifications (Synchronous)

Trigger on changed values by ADS Notifications

```

private void RegisterNotifications()
{
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        try
        {
            // Notification to a DINT Type (UINT32)
            // Check for change every 200 ms

            int size = sizeof(UInt32);
            //byte[] notificationBuffer = new byte[sizeof(UInt32)];

            notificationHandle = client.AddDeviceNotification("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null);
            Thread.Sleep(5000); // Sleep the main thread to get some (asynchronous Notifications)
        }
        finally
        {
            // Unregister the Event / Handle
            client.DeleteDeviceNotification(notificationHandle);
            client.AdsNotification -= Client_AdsNotification;
        }
    }
}

private void Client_AdsNotification(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
}

```

```

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

```

5.5 Reactive Read/Write with Reactive Extensions

Observation of Notifications

Notifications (address specified by InstancePath) will be received cyclically as defined in [Default \[► 1111\]](#) and put into the Observer pipeline for further processing. This example takes 20 Notification samples before returning.

Observe for Notifications

```

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    }
    );

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

```

Observation of Symbolic Notifications

This example determines a symbol via Symbolloader and samples its values by Notifications with customized [NotificationSettings \[► 1106\]](#). Again 20 samples are taken before the Observation finishes.

Observe for Symbol Notifications

```

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    }
    );

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

```

Observation of dynamic Symbol Notifications

Here, the symbol is determined via Symbolloader again, but now the Notifications will be processed as 'dynamic' values.

Observer for dynamic Symbol Notifications

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    dynamic symbols = symbolLoader.SymbolsDynamic;
    dynamic cycleCount = symbols.TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        // Value objects can be dynamically (on the fly) created objects here (e.g. structs)
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    // We have to give the 'hint' about IValueSymbol here, that the CLR finds the Extension Method 'WhenValueChanged' during runtime.
    IDisposable subscription = ((IValueSymbol)cycleCount).WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Polling observer

A polling observer doesn't use ADS notifications, but instead the value read is triggered by a time interval (polling) or a customized trigger function (on request).

Polling observer

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo.CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    // Take 20 Values in an Interval of 500ms
    IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Writing values with observable subject

In this example, a symbolic value is written in a static time interval (1 second). The writing stops after 10 values. The [WriteValues \[▶ 1347\]](#) extension method can be used to seamlessly bind value writing into a reactive application.

Writing values with observable subject

```
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"];

    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i =>
(object) (short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));

    Console.ReadKey(); // Wait for Key press
    dispose.Dispose(); // Dispose the Subscription
}
```

5.6 Upgrading existing ADS Application code (Version 4.X -- > 6.X)

Code migration path for application code Beckhoff.TwinCAT.Ads 4.X --> 6.X

The Beckhoff.TwinCAT.Ads package Version 4.X implements the Beckhoff ADS API for the Microsoft .NET FullFramework (>= 4.0) / CompactFramework (>= 2.0). Newer .NET framework implementations are basing on '.NET Core' (e.g. .NET 6.0).

To support these newer flavours like .NET Core, .NET Standard together with its new features, a new Version 6.X of the Beckhoff.TwinCAT.Ads API is available.

Because new platform features need some breaking changes within the API for seamless support, the decision was taken to remove some legacy features and burdens in the reimplementaion. Nevertheless most of the interfaces remained stable and only a few approaches changed.

The breaking changes and some guidelines will be discussed here.

Use 'async' wherever possible.

Internally, the Beckhoff.TwinCAT.Ads package are implemented asynchronously (Methodnames ending with 'Async'). The synchronous counterparts of the async methods are implemented as thin wrapper around the async method with synchronization.

As consequence the synchronous method is less flexible (only usable in synchronous code paths) and less performant (blocking calls, more thread switches). Furthermore, with the 'async' keyword support of .NET they are also not easier to use. So take more than a thought about migrate to async code.

Synchronous Read value

```
uint variableHandle = ...;
int value;
AdsErrorCode errorCode = adsClient.TryReadValue<int>(variableHandle, out int value);
```

Asynchronous

```
uint variableHandle = ...;
ResultValue<int> result = await adsClient.ReadValueAsync(variableHandle, CancellationToken.None);
AdsErrorCode errorCode = result.ErrorCode;
int value = result.Value;
```

However in synchronous application code paths the await keyword is not allowed. Using the synchronous methods is the only option besides migrating the whole application code up to the main root. Further information can be found here: [Asynchronous programming with async and await](#)

Name change TcAdsClient --> AdsClient

This should simply document that there is another implementation. Just rename the class instance.

Version 4.X

```
TcAdsClient client = new TcAdsClient()
```

Version 6.X

```
AdsClient client = new AdsClient()
```

Marshalling of byte[] and missing AdsStream class.

Newer .NET implementations have more efficient possibilities to exchange memory data between software layers and classes (see [Memory- and span-related types](#)).

All API interface methods that use the combination of parameters (bytes, offset, length) or AdsStream

Version 4.X

```
public int TcAdsClient.Read(uint indexGroup, uint indexOffset, AdsStream dataStream)
```

Version 4.X

```
public int TcAdsClient.Write(uint indexGroup, uint indexOffset, AdsStream dataStream)
```

or

Version 4.X

```
public int TcAdsClient.Read(uint indexGroup, uint indexOffset, byte[] bytes, int offset, length)
```

Version 4.X

```
public int TcAdsClient.Write(uint indexGroup, uint indexOffset, byte[] bytes, int offset, length)
```

are changed like this:

Version 6.X

```
public int AdsClient.Read(uint indexGroup, uint indexOffset, Memory<byte> buffer)
```

Version 6.X

```
public int AdsClient.Write(uint indexGroup, uint indexOffset, ReadOnlyMemory<byte> buffer)
```

With this change a lot of interfaces will look much cleaner and act more efficient because of less array copy operations.

Handles are defined as uint type.

Handles are now streamlined consistently as uint type instead of int.

Version 4.X

```
public int TcAdsClient.CreateVariableHandle(string symbolPath)
```

Version 6.X

```
public uint AdsClient.CreateVariableHandle(string symbolPath)
```

Notification parameters bundled in one settings class.**Version 4.X**

```
public int AddDeviceNotification(string symbolPath, AdsStream dataStream, int offset, int length, AdsTransMode transMode, int cycleTime, int maxDelay, Object userData)
```

Version 4.X

```
public int TcAdsClient.AddDeviceNotification(string symbolPath, AdsStream dataStream, int offset, int length, AdsTransMode transMode, int cycleTime, int maxDelay, Object userData)
```

The new parameter-set simply needs the (byte) size of the transferred data instead of AdsStream, offset and length. Furthermore transMode, cycleTime and maxDelay are bundled in the NotificationSettings object.

Version 6.X

```
public uint AdsClient.AddDeviceNotification(string symbolPath, int dataSize, NotificationSettings settings, object userData)
```

6 TwinCAT.Ads Namespaces

TwinCAT ADS .NET API for .NET CORE

Namespaces

Namespace	Description
TwinCAT [▶ 59]	Common namespace for types that are not specific to ADS.
TwinCAT.Ads [▶ 179]	ADS root namespace.
TwinCAT.Ads.Extensions [▶ 3292]	
TwinCAT.Ads.Reactive [▶ 1249]	Reactive Extensions for the ADS Client. All types within are contained in the ADS companion package "Beckhoff.TwinCAT.Ads.Reactive" which must be referenced separately. https://www.nuget.org/packages/Beckhoff.TwinCAT.Ads.Reactive/
TwinCAT.Ads.Server [▶ 1374]	This framework can be used to build custom ADS server application. Important note: Please contact Beckhoff to receive a reserved ADS port number. Namespace for the TwinCAT ADS Server Component.
TwinCAT.Ads.Server.TypeSystem [▶ 3230]	
TwinCAT.Ads.SumCommand [▶ 1525]	ADS offers powerful and fast communication to exchange any kind of information. It's possible to read single variables or complete arrays and structures with each one single ADS-API call. ADS Sum-Commands offer to read/write with one single ADS call multiple variables which are not structured within a linear memory, effectively reducing roundtrips.
TwinCAT.Ads.TcpRouter [▶ 1619]	
TwinCAT.Ads.TypeSystem [▶ 1698]	Root namespace for the ADS type system.
TwinCAT.Ams [▶ 2003]	
TwinCAT.PlcOpen [▶ 2016]	
TwinCAT.Router [▶ 3255]	
TwinCAT.SystemService [▶ 3272]	
TwinCAT.Tls [▶ 3288]	
TwinCAT.TypeSystem [▶ 2083]	Namespace for the common (non ADS dependent) type system.
TwinCAT.TypeSystem.Generic [▶ 3086]	Namespace for the dynamic part of the common type system.
TwinCAT.ValueAccess [▶ 3179]	Namespace for the common (non ADS dependent) value access.

Also see about this

- [TwinCAT.Ads.ValueAccess Namespace \[▶ 2002\]](#)

6.1 TwinCAT Namespace

Common namespace for types that are not specific to ADS.

Classes

	Class	Description
	AdsCommunicationStatistics [▶ 160]	ADS Communication statistics
	AdsException [▶ 61]	Base class for all exceptions thrown by the TwinCAT.Ads component
	ClientNotConnectedException [▶ 67]	Class ClientNotConnectedException
	ConnectionStateChangedEventArgs [▶ 74]	Event arguments for the Connection status changed event.
	HandleBagNotInitializedException [▶ 171]	Class ClientNotConnectedException
	Session [▶ 107]	Abstract Session base class.
	SessionConnectionStateChangedEventArgs [▶ 125]	EventArguments for the ConnectionStateChanged events.
	SessionException [▶ 130]	Session Exception
	SessionNotConnectedException [▶ 137]	Class SessionNotConnectedException.
	SessionProvider.TSession, TAddress, TSettings . [▶ 142]	Abstract base class for a Custom Session provider
	SymbolLoaderSettings [▶ 148]	Settings object for the SymbolLoader initialization.

Interfaces

	Interface	Description
	IAdsClientSettings [▶ 175]	Settings for the Ads client
	IConnection [▶ 79]	Interface IConnection
	IConnectionStateProvider [▶ 89]	Interface IConnectionStateProvider
	ISession [▶ 92]	Interface ISession
	ISessionProvider [▶ 99]	Interface ISessionProvider

	Interface	Description
	ISessionProvider.TSession, TAddress, TSettings. [▸ 102]	Generic ISessionProvider interface
	ISymbolLoaderSettings [▸ 104]	Interface ISymbolLoaderSettings
	ISymbolServerProvider [▸ 106]	Interface ISymbolServerProvider
	IValueFactorySettings [▸ 176]	Interface IValueFactorySettings

Enumerations

	Enumeration	Description
	ConnectionState [▸ 72]	Connection state enumeration
	ConnectionStateChangedReason [▸ 79]	Reason for the Connection status changed event.
	RouteAccessType [▸ 169]	Specifies the method to determine the Remote routes list.
	RoutePersistenceType [▸ 170]	Route persistence type (Static or Temporary)
	SessionProviderCapabilities [▸ 148]	Enum SessionProviderCapabilities
	SymbolsLoadMode [▸ 159]	Enum SymbolsLoadMode

6.1.1 AdsException Class

Base class for all exceptions thrown by the TwinCAT.Ads component

Inheritance Hierarchy

[System.Object](#)
[System.Exception](#)
[TwinCAT.AdsException](#)
[More... \[▸ 63\]](#)

Namespace: [TwinCAT \[▸ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
[SerializableAttribute]
public class AdsException : Exception
```

The AdsException type exposes the following members.

Constructors

	Name	Description
	AdsException. [▶ 64]	Initializes a new Instance of the AdsException class.
	AdsException(String) [▶ 64]	Initializes a new Instance of the AdsException class.
	AdsException(SerializationInfo, StreamingContext) [▶ 65]	Initializes a new instance of the AdsException class.
	AdsException(String, Exception) [▶ 65]	Initializes a new Instance of the AdsException class.

Properties

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)
	HResult	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception.)
	Message	Gets a message that describes the current exception. (Inherited from Exception.)
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception.)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object.)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)

	Name	Description
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetObjectData	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Inherited from Exception .)
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

Events

	Name	Description
	SerializeObjectState	Obsolete. Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception .)

[TwinCAT Namespace \[▶ 59\]](#)

6.1.2.1.2 ClientNotConnectedException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the [ClientNotConnectedException \[▶ 67\]](#) class.

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected ClientNotConnectedException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
```

Parameters

serializationInfo	Type: System.Runtime.Serialization.SerializationInfo The serialization information.
streamingContext	Type: System.Runtime.Serialization.StreamingContext The streaming context.

6.1.2.2 ClientNotConnectedException Properties

The [ClientNotConnectedException](#) [► 67] type exposes the following members.

Properties

	Name	Description
	Connection [► 71]	Gets the connection.

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception .)
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception .)
	HRESULT	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception .)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception .)
	Message	Gets a message that describes the current exception. (Inherited from Exception .)
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception .)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception .)
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception .)

Reference

6.1.2.3 ClientNotConnectedException Methods

The [ClientNotConnectedException](#) [► 67] type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)

	Name	Description
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetObjectData	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Inherited from Exception .)
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

6.1.2.4 ClientNotConnectedException Events

The [ClientNotConnectedException](#) [► 67] type exposes the following members.

Events

	Name	Description
	SerializeObjectState	Obsolete. Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception .)

Reference

[ClientNotConnectedException Class](#) [► 67]

[TwinCAT Namespace](#) [► 59]

6.1.3 ConnectionState Enumeration

Table 1: Extracted nested table 0

AdsErrorCode [► 664]	Description
WSA_ConnRefused [► 664]	The target computer actively refused the socket connection.
PortDisabled [► 664]	The target port is disabled.
PortNotConnected [► 664]	The target port is not connected.
ClientSyncTimeOut [► 664]	The target system didn't answer within the configured timeout timespan.
TargetMachineNotFound [► 664]	The target machine was not found.
TargetPortNotFound [► 664]	The ADS target port couldn't be found on the target address.

AdsErrorCode [▶ 664]	Description
ClientPortNotOpen [▶ 664]	The ADS target port on the target address is not open.

Connection state enumeration

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum ConnectionState
```

Members

	Member name	Value	Description
	None	0	Unknown / Uninitialized
	Disconnected	1	Disconnected
	Connected	2	Connected
	Lost	3	<p>Connection lost</p> <p>The connection is (temporarily) lost and can be reestablished / resurrected after a (resurrection) timeout.</p> <p>During ADS communication, specific AdsErrorCode [▶ 664] responses lead to so called 'Tripping Errors' that triggers the change from Connected to Lost. This is a behavior of the internal ConnectionStateInterceptor that observes the condition of the actual connection and can be configured via the session settings. So called tripping errors are the following:see "Extracted nested table 0"</p> <p>All theses described ADS error lead to lost connection state. Depending on the configured communication interceptor / or Session settings the ConnectionState returns to Connected under the following conditions:</p> <ul style="list-style-type: none"> • An ADS communication is triggered (Read/Write/ReadWrite) is triggered by the application. • The resurrection time is elapsed (21 Seconds, if the Default Session settings / Interceptors are used) <p>A setting of <code>TwinCAT.Ads.SessionSettings.FastWriteThrough</code> is switching off this behaviour.</p>

6.1.6 IConnection Interface

Interface IConnection

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IConnection : IConnectionStateProvider
```

The IConnection type exposes the following members.

Properties

	Name	Description
	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding.
	Id [▶ 81]	Gets the Connection Identifier .
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.
	Session [▶ 82]	Gets the session that initiated this IConnection
	Timeout [▶ 83]	Gets the timeout (in milliseconds)

Methods

	Name	Description
	Close [▶ 83]	Closes this IConnection
	Connect [▶ 84]	(Re)Connects the IConnection when disconnected.
	Disconnect [▶ 84]	Disconnects this IConnection.

Events

	Name	Description
	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Reference

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.6.1.1 IConnection.DefaultValueEncoding Property

Gets the default value encoding.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Encoding DefaultValueEncoding { get; }
```

Property Value

Type: [Encoding](#)

The default value encoding.

Reference

[IConnection Interface](#) [[▶ 79](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.6.1.2 IConnection.Id Property

Gets the Connection Identifier .

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
int Id { get; }
```

Property Value

Type: [Int32](#)

The identifier.

Reference

6.1.6.3 IConnection Events

The [IConnection](#) [[▶ 79](#)] type exposes the following members.

Events

	Name	Description
 	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Reference

[IConnection Interface](#) [▶ 79]

[TwinCAT Namespace](#) [▶ 59]

6.1.7 IConnectionStateObserver Interface

Interface for a Connection state watcher (observer)

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public interface IConnectionStateObserver : IConnectionStateProvider
```

The IConnectionStateObserver type exposes the following members.

Properties

	Name	Description
	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	ErrorsSinceLastSucceeded [▶ 86]	Gets the number of errors since the last successful access
	LastAccess [▶ 86]	Gets the DateTimeOffset of the last tried access
	LastSucceededAccess [▶ 87]	Gets the DateTimeOffset of the last successful data communication
	Quality [▶ 87]	Gets the quality of the current cached value (the age of the data)
	TotalCycles [▶ 88]	Gets the number of successful reads / writes
	TotalErrors [▶ 88]	Gets the error count of accesses

Events

	Name	Description
	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

int TotalCycles { get; }
```

Property Value

Type: [Int32](#)

Reference

[IConnectionStateObserver Interface](#) [[► 85](#)]

[TwinCAT Namespace](#) [[► 59](#)]

6.1.7.1.6 IConnectionStateObserver.TotalErrors Property

Gets the error count of accesses

Namespace: [TwinCAT](#) [[► 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
int TotalErrors { get; }
```

Property Value

Type: [Int32](#)

Reference

[IConnectionStateObserver Interface](#) [[► 85](#)]

[TwinCAT Namespace](#) [[► 59](#)]

6.1.7.2 IConnectionStateObserver Events

The [IConnectionStateObserver](#) [[► 85](#)] type exposes the following members.

Events

	Name	Description
 	ConnectionStateChanged [► 91]	Occurs when connection status of the IConnectionStateProvider [► 89] has been changed. (Inherited from IConnectionStateProvider [► 89].)

Reference

[IConnectionStateObserver Interface \[▶ 85\]](#)

[TwinCAT Namespace \[▶ 59\]](#)

6.1.8 IConnectionStateProvider Interface

Interface IConnectionStateProvider

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IConnectionStateProvider
```

The IConnectionStateProvider type exposes the following members.

Properties

	Name	Description
	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider

Events

	Name	Description
	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider has been changed.

Reference

[TwinCAT Namespace \[▶ 59\]](#)

6.1.8.1 IConnectionStateProvider Properties

The [IConnectionStateProvider \[▶ 89\]](#) type exposes the following members.

Properties

	Name	Description
	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89]

Reference

[IConnectionStateProvider Interface \[▶ 89\]](#)

[TwinCAT Namespace \[▶ 59\]](#)

6.1.8.1.1 IConnectionStateProvider.ConnectionState Property

Gets the current Connection state of the [IConnectionStateProvider](#) [[▶ 89](#)]

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ConnectionState ConnectionState { get; }
```

Property Value

Type: [ConnectionState](#) [[▶ 72](#)]

The state of the connection.

Remarks

The Connection state changes only if the [IConnection](#) [[▶ 79](#)] is established / shut down or active communication is triggered by the User of the [IConnection](#) [[▶ 79](#)] object.

Examples

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;

    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {

```

```

    tbAdsState.Text = "Invalid";
  }
}

```

Reference

[TwinCAT Namespace \[► 59\]](#)

[IConnectionStateProvider.ConnectionStateChanged \[► 91\]](#)

6.1.8.2 IConnectionStateProvider Events

The [IConnectionStateProvider \[► 89\]](#) type exposes the following members.

Events

	Name	Description
 	ConnectionStateChanged [► 91]	Occurs when connection status of the IConnectionStateProvider [► 89] has been changed.

Reference

[IConnectionStateProvider Interface \[► 89\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.8.2.1 IConnectionStateProvider.ConnectionStateChanged Event

Occurs when connection status of the [IConnectionStateProvider \[► 89\]](#) has been changed.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: [System.EventHandler.ConnectionStateChangedEventArgs \[► 74\]](#).

Remarks

The Connection state changes only if the [IConnection \[► 79\]](#) is established / shut down or active communication is triggered by the User of the [IConnection \[► 79\]](#) object.

Examples

The following sample shows how to keep the [ConnectionState \[► 90\]](#) updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```

private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

```

```

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;

    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)

6.1.9 ISession Interface

Interface ISession

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface ISession : IConnectionStateProvider
```

The ISession type exposes the following members.

Properties

	Name	Description
	AddressSpecifier [► 94]	Gets the communication endpoint address string representation.

	Name	Description
	Connection [▶ 94]	Gets the Connection object.
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	EstablishedAt [▶ 95]	Gets the UTC time when the session was established.
	Id [▶ 95]	Gets the Session Id
	IsConnected [▶ 96]	Gets a value indicating whether the session is connected.
	Provider [▶ 96]	Gets the Session Provider

Methods

	Name	Description
	Close [▶ 97]	Closes this ISession
	Connect [▶ 97]	Connects the session and returns the established IConnection [▶ 79] object.
	ConnectAsync [▶ 99]	Connects the session and returns the established IConnection [▶ 79] object.
	Disconnect [▶ 98]	Disconnects the ISession
	EnsureConnection [▶ 98]	Ensures, that the ISession is connected and returns the IConnection [▶ 79] object.

Events

	Name	Description
 	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Reference

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.9.1 ISession Properties

The [ISession](#) [[▶ 92](#)] type exposes the following members.

Properties

	Name	Description
	AddressSpecifier [▶ 94]	Gets the communication endpoint address string representation.
	Connection [▶ 94]	Gets the Connection object.
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)

	Name	Description
	EstablishedAt [▶ 95]	Gets the UTC time when the session was established.
	Id [▶ 95]	Gets the Session Id
	IsConnected [▶ 96]	Gets a value indicating whether the session is connected.
	Provider [▶ 96]	Gets the Session Provider

Reference

[ISession Interface](#) [▶ 92]

[TwinCAT Namespace](#) [▶ 59]

6.1.9.1.1 ISession.AddressSpecifier Property

Gets the communication endpoint address string representation.

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
string AddressSpecifier { get; }
```

Property Value

Type: [String](#)
The address.

Reference

[ISession Interface](#) [▶ 92]

[TwinCAT Namespace](#) [▶ 59]

6.1.9.1.2 ISession.Connection Property

Gets the Connection object.

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
IConnection? Connection { get; }
```

Property Value

Type: [IConnection](#) [▶ 79]
The connection.

Remarks

The [IConnection](#) [▸ 79] object is established by the [ISession](#) [▸ 92] via [Connect.](#) [▸ 97] and is valid until the [Disconnect.](#) [▸ 98] method or the Dispose method is called. Any possible resurrections after communication losses will be done transparently under the hood of the [IConnection](#) [▸ 79] so that the [IConnection](#) [▸ 79] instance and [ISession](#) [▸ 92] instance.

Reference

[ISession Interface](#) [▸ 92]

[TwinCAT Namespace](#) [▸ 59]

6.1.9.1.3 ISession.EstablishedAt Property

Gets the UTC time when the session was established.

Namespace: [TwinCAT](#) [▸ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
DateTimeOffset EstablishedAt { get; }
```

Property Value

Type: [DateTimeOffset](#)

The session established at.

Reference

[ISession Interface](#) [▸ 92]

[TwinCAT Namespace](#) [▸ 59]

6.1.9.1.4 ISession.Id Property

Gets the Session Id

Namespace: [TwinCAT](#) [▸ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
int Id { get; }
```

Property Value

Type: [Int32](#)

The identifier.

Reference

[ISession Interface](#) [▸ 92]

[TwinCAT Namespace](#) [▸ 59]

6.1.9.1.5 ISession.IsConnected Property

Gets a value indicating whether the session is connected.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
bool IsConnected { get; }
```

Property Value

Type: [Boolean](#)

true if session is connected; otherwise, false.

Reference

[ISession Interface](#) [[▶ 92](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.9.1.6 ISession.Provider Property

Gets the Session Provider

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ISessionProvider Provider { get; }
```

Property Value

Type: [ISessionProvider](#) [[▶ 99](#)]

The provider.

Reference

[ISession Interface](#) [[▶ 92](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.9.2 ISession Methods

The [ISession](#) [[▶ 92](#)] type exposes the following members.

Methods

	Name	Description
	Close [▶ 97]	Closes this ISession [▶ 92]
	Connect [▶ 97]	Connects the session and returns the established IConnection [▶ 79] object.
	ConnectAsync [▶ 99]	Connects the session and returns the established IConnection [▶ 79] object.

	Name	Description
	Disconnect [▶ 98]	Disconnects the ISession [▶ 92]
	EnsureConnection [▶ 98]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object.

Reference

[ISession Interface](#) [[▶ 92](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.9.2.1 ISession.Close Method

Closes this [ISession](#) [[▶ 92](#)]

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Close()
```

Remarks

Closes also the [IConnection](#) [[▶ 79](#)].

Reference

[ISession Interface](#) [[▶ 92](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.9.2.2 ISession.Connect Method

Connects the session and returns the established [IConnection](#) [[▶ 79](#)] object.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
IConnection Connect()
```

Return Value

Type: [IConnection](#) [[▶ 79](#)]

The [IConnection](#) [[▶ 79](#)] object.

Remarks

The [IConnection](#) [[▶ 79](#)] will be valid until the [ISession](#) [[▶ 92](#)] is disconnected via the [Disconnect](#). [[▶ 98](#)] method or the Dispose method is called. Any possible resurrections after communication losses will be done transparently within the [IConnection](#) [[▶ 79](#)] so that the [IConnection](#) [[▶ 79](#)] instance and [ISession](#) [[▶ 92](#)] instance remains.

Reference

[ISession Interface \[▸ 92\]](#)

[TwinCAT Namespace \[▸ 59\]](#)

6.1.9.2.3 ISession.Disconnect Method

Disconnects the [ISession \[▸ 92\]](#)

Namespace: [TwinCAT \[▸ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
bool Disconnect()
```

Return Value

Type: [Boolean](#)

true if Session was disconnected, false if the session was already closed.

Remarks

Disposes also the [IConnection \[▸ 79\]](#).

Reference

[ISession Interface \[▸ 92\]](#)

[TwinCAT Namespace \[▸ 59\]](#)

6.1.9.2.4 ISession.EnsureConnection Method

Ensures, that the [ISession \[▸ 92\]](#) is connected and returns the [IConnection \[▸ 79\]](#) object.

Namespace: [TwinCAT \[▸ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
IConnection EnsureConnection()
```

Return Value

Type: [IConnection \[▸ 79\]](#)

IConnection.

Remarks

If the session is actually not connected an exception will be thrown.

Reference

[ISession Interface \[▸ 92\]](#)

[TwinCAT Namespace \[▸ 59\]](#)

6.1.9.2.5 ISession.ConnectAsync Method

Connects the session and returns the established [IConnection](#) [[79](#)] object.

Namespace: [TwinCAT](#) [[59](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<IConnection> ConnectAsync (
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken
--------	--

Return Value

Type: [Task.IConnection](#) [[79](#)].

The [IConnection](#) [[79](#)] object.

Remarks

The [IConnection](#) [[79](#)] will be valid until the [ISession](#) [[92](#)] is disconnected via the [Disconnect](#) [[98](#)] method or the Dispose method is called. Any possible resurrections after communication losses will be done transparently within the [IConnection](#) [[79](#)] so that the [IConnection](#) [[79](#)] instance and [ISession](#) [[92](#)] instance remains.

Reference

[ISession Interface](#) [[92](#)]

[TwinCAT Namespace](#) [[59](#)]

6.1.9.3 ISession Events

The [ISession](#) [[92](#)] type exposes the following members.

Events

	Name	Description
 	ConnectionStateChanged [91]	Occurs when connection status of the IConnectionStateProvider [89] has been changed. (Inherited from IConnectionStateProvider [89].)

Reference

[ISession Interface](#) [[92](#)]

6.1.10 IServiceProvider Interface

Interface [ISessionProvider](#)

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface ISessionProvider
```

The ISessionProvider type exposes the following members.

Properties

	Name	Description
	Capabilities [► 100]	Gets the capabilities.
	Name [► 101]	Gets the name of the SessionProvider

Methods

	Name	Description
	Create [► 101]	Creates the Session with address and communication settings.

Remarks

Interface for Supporting Session / Communication providers

Reference

[TwinCAT Namespace \[► 59\]](#)

6.1.10.1 ISessionProvider Properties

The [ISessionProvider \[► 99\]](#) type exposes the following members.

Properties

	Name	Description
	Capabilities [► 100]	Gets the capabilities.
	Name [► 101]	Gets the name of the SessionProvider

Reference

6.1.10.2 ISessionProvider Methods

The [ISessionProvider](#) [[▶](#) [99](#)] type exposes the following members.

Methods

	Name	Description
	Create [▶ 101]	Creates the Session with address and communication settings.

Reference

[ISessionProvider Interface](#) [[▶](#) [99](#)]

[TwinCAT Namespace](#) [[▶](#) [59](#)]

6.1.10.2.1 ISessionProvider.Create Method

Creates the Session with address and communication settings.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ISession Create(
    Object address,
    ISessionSettings? settings
)
```

Parameters

address	Type: System.Object The address.
settings	Type: ISessionSettings The settings.

Return Value

Type: [ISession \[► 92\]](#)

ISession.

Reference

[ISessionProvider Interface \[► 99\]](#)

6.1.11 ISessionProvider.TSession, TAddress, TSettings. Interface

Generic ISessionProvider interface

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface ISessionProvider<TSession, TAddress, TSettings> : ISessionProvider
where TSession : ISession
```

Type Parameters

TSession	Session type
TAddress	Address specifier
TSettings	Communication settings type

The ISessionProvider.TSession, TAddress, TSettings. type exposes the following members.

Properties

	Name	Description
	Capabilities [► 100]	Gets the capabilities. (Inherited from ISessionProvider [► 99].)
	Name [► 101]	Gets the name of the SessionProvider (Inherited from ISessionProvider [► 99].)

Methods

	Name	Description
	Create(TAddress, TSettings) [▶ 104]	Creates the Session with specified address and communication settings.
	Create(Object, ISessionSettings) [▶ 101]	Creates the Session with address and communication settings. (Inherited from ISessionProvider [▶ 99].)

Reference

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.13 ISymbolServerProvider Interface

Interface ISymbolServerProvider

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface ISymbolServerProvider
```

The ISymbolServerProvider type exposes the following members.

Properties

	Name	Description
	SymbolServer [► 106]	Gets the symbol server.

Reference

[TwinCAT Namespace \[► 59\]](#)

6.1.13.1 ISymbolServerProvider Properties

The [ISymbolServerProvider \[► 106\]](#) type exposes the following members.

Properties

	Name	Description
	SymbolServer [► 106]	Gets the symbol server.

Reference

[ISymbolServerProvider Interface \[► 106\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.13.1.1 ISymbolServerProvider.SymbolServer Property

Gets the symbol server.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ISymbolServer SymbolServer { get; }
```

Property Value

Type: [ISymbolServer \[► 2719\]](#)

The symbol server. To initially create this information the connection must be established.

Reference

[ISymbolServerProvider Interface \[▶ 106\]](#)

[TwinCAT Namespace \[▶ 59\]](#)

6.1.14 Session Class

Abstract Session base class.

Inheritance Hierarchy

System.Object
 TwinCAT.Session
 TwinCAT.Ads.AdsSessionBase [▶ 716]

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public abstract class Session : ISession,
    IConnectionStateProvider, ISymbolServerProvider, IDisposable
```

The Session type exposes the following members.

Properties

	Name	Description
	AddressSpecifier [▶ 109]	Gets the communication endpoint address string representation.
	Connection [▶ 110]	Gets the (established) connection.
 	ConnectionState [▶ 110]	Gets the current Connection state of the Session
	Disposed [▶ 111]	Gets a value indicating whether this Session is disposed.
	EstablishedAt [▶ 112]	Gets the UTC time when the session was established.
	Id [▶ 112]	Gets the Session Identifier
	IsConnected [▶ 113]	Gets a value indicating whether this instance is connected.
	Name [▶ 113]	Gets the name of the session
	SymbolServer [▶ 113]	Gets the symbol server.

Methods

	Name	Description
	Close [▶ 115]	Closes this ISession [▶ 92]
	Connect [▶ 116]	Connects the session.

	Name	Description
	ConnectAsync [▶ 122]	Connects the session.
	Disconnect [▶ 116]	Disconnects the session from the target.
	Dispose. [▶ 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
	Dispose(Boolean) [▶ 118]	Releases unmanaged and - optionally - managed resources.
	EnsureConnection [▶ 120]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetSessionName [▶ 118]	Gets the name/string identifier of the session.
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	OnConnect [▶ 119]	Handler function connecting the Session.
	OnConnectAsync [▶ 123]	Handler function connecting the Session.
	OnConnectionState Changed [▶ 121]	Handles the [E:ConnectionStateChanged] event.
	OnCreateSymbolSer ver [▶ 119]	Handler function creating the ISymbolServer [▶ 2719]
	OnDisconnect [▶ 120]	Handler function disconnecting the session.
	OnGetAddress [▶ 120]	Handler function getting the address of the session.
	ToString [▶ 121]	Returns a String that represents this instance. (Overrides Object.ToString .)

Events

	Name	Description
	ConnectionStateCha nged [▶ 124]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed.

Reference

[TwinCAT Namespace](#) [▶ 59]

[TwinCAT.ISession](#) [▶ 92]

[System.IDisposable](#)

6.1.14.1 Session Properties

The [Session](#) [[▶ 107](#)] type exposes the following members.

Properties

	Name	Description
	AddressSpecifier [▶ 109]	Gets the communication endpoint address string representation.
	Connection [▶ 110]	Gets the (established) connection.
 	ConnectionState [▶ 110]	Gets the current Connection state of the Session [▶ 107]
	Disposed [▶ 111]	Gets a value indicating whether this Session [▶ 107] is disposed.
	EstablishedAt [▶ 112]	Gets the UTC time when the session was established.
	Id [▶ 112]	Gets the Session Identifier
	IsConnected [▶ 113]	Gets a value indicating whether this instance is connected.
	Name [▶ 113]	Gets the name of the session
	SymbolServer [▶ 113]	Gets the symbol server.

Reference

[Session Class](#) [[▶ 107](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.14.1.1 Session.AddressSpecifier Property

Gets the communication endpoint address string representation.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public string AddressSpecifier { get; }
```

Property Value

Type: [String](#)
The address.

Implements

[ISession.AddressSpecifier](#) [[▶ 94](#)]

Reference

[Session Class](#) [► 107]

[TwinCAT Namespace](#) [► 59]

6.1.14.1.2 Session.Connection Property

Gets the (established) connection.

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public IConnection? Connection { get; protected set; }
```

Property Value

Type: [IConnection](#) [► 79]

The [IConnection](#) [► 79] if connection established, or **null** if not connected.

Implements

[ISession.Connection](#) [► 94]

Reference

[Session Class](#) [► 107]

[TwinCAT Namespace](#) [► 59]

6.1.14.1.3 Session.ConnectionState Property

Gets the current Connection state of the [Session](#) [► 107]

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public ConnectionState ConnectionState { get; }
```

Property Value

Type: [ConnectionState](#) [► 72]

The state of the connection.

Implements

[IConnectionStateProvider.ConnectionState](#) [► 90]

Remarks

The Connection state changes only if the [IConnection](#) [► 79] is established / shut down or active communication is triggered by the User of the [IConnection](#) [► 79] object.

Examples

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;

    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
}
```

[Session.ConnectionStateChanged \[► 124\]](#)

6.1.14.1.4 Session.Disposed Property

Gets a value indicating whether this [Session \[► 107\]](#) is disposed.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Disposed { get; }
```

Property Value

Type: [Boolean](#)
true if disposed; otherwise, false.

Reference

[Session Class](#) [► 107]

[TwinCAT Namespace](#) [► 59]

6.1.14.1.5 Session.EstablishedAt Property

Gets the UTC time when the session was established.

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset EstablishedAt { get; }
```

Property Value

Type: [DateTimeOffset](#)
The session established at.

Implements

[ISession.EstablishedAt](#) [► 95]

Reference

[Session Class](#) [► 107]

[TwinCAT Namespace](#) [► 59]

6.1.14.1.6 Session.Id Property

Gets the Session Identifier

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Id { get; }
```

Property Value

Type: [Int32](#)
The identifier.

Implements

[ISession.Id](#) [► 95]

Reference

[Session Class](#) [▶ 107]

[TwinCAT Namespace](#) [▶ 59]

6.1.14.1.7 Session.IsConnected Property

Gets a value indicating whether this instance is connected.

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsConnected { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is connected; otherwise, false.

Implements

[ISession.IsConnected](#) [▶ 96]

Reference

[Session Class](#) [▶ 107]

[TwinCAT Namespace](#) [▶ 59]

6.1.14.1.8 Session.Name Property

Gets the name of the session

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public string Name { get; }
```

Property Value

Type: [String](#)

The name.

Reference

[Session Class](#) [▶ 107]

[TwinCAT Namespace](#) [▶ 59]

6.1.14.1.9 Session.SymbolServer Property

Gets the symbol server.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public ISymbolServer SymbolServer { get; }
```

Property Value

Type: [ISymbolServer \[► 2719\]](#)

The symbol server.

Implements

[ISymbolServerProvider.SymbolServer \[► 106\]](#)

Remarks

The [Session \[► 107\]](#) object holds and caches the symbolic information. To initially create this information, the Connection must be established.

Reference

[Session Class \[► 107\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.14.2 Session Methods

The [Session \[► 107\]](#) type exposes the following members.

Methods

	Name	Description
	Close [► 115]	Closes this ISession [► 92]
	Connect [► 116]	Connects the session.
	ConnectAsync [► 122]	Connects the session.
	Disconnect [► 116]	Disconnects the session from the target.
	Dispose. [► 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
	Dispose(Boolean) [► 118]	Releases unmanaged and - optionally - managed resources.
	EnsureConnection [► 120]	Ensures, that the ISession [► 92] is connected and returns the IConnection [► 79] object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object.)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)
	GetHashCode	Serves as the default hash function. (Inherited from Object.)

	Name	Description
	GetSessionName [▶ 118]	Gets the name/string identifier of the session.
	GetType	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)
	MemberwiseClone	Creates a shallow copy of the current <u>Object</u> . (Inherited from <u>Object</u> .)
	OnConnect [▶ 119]	Handler function connecting the Session.
	OnConnectAsync [▶ 123]	Handler function connecting the Session.
	OnConnectionState Changed [▶ 121]	Handles the [E:ConnectionStateChanged] event.
	OnCreateSymbolSer ver [▶ 119]	Handler function creating the <u>ISymbolServer</u> [▶ 2719]
	OnDisconnect [▶ 120]	Handler function disconnecting the session.
	OnGetAddress [▶ 120]	Handler function getting the address of the session.
	ToString [▶ 121]	Returns a <u>String</u> that represents this instance. (Overrides <u>Object.ToString</u> ..)

Reference

[Session Class](#) [▶ 107]

[TwinCAT Namespace](#) [▶ 59]

6.1.14.2.1 Session.Close Method

Closes this ISession [▶ 92]

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Close()
```

Implements

[ISession.Close](#). [▶ 97]

Remarks

Closes also the IConnection [▶ 79].

Reference

[Session Class](#) [▶ 107]

[TwinCAT Namespace](#) [▶ 59]

6.1.14.2 Session.Connect Method

Connects the session.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public IConnection Connect()
```

Return Value

Type: [IConnection \[► 79\]](#)

The [IConnection \[► 79\]](#) object.

Implements

[ISession.Connect. \[► 97\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	
AdsException [► 61]	Connection to '{this.AddressSpecifier}' couldn't be established!

Remarks

The [IConnection \[► 79\]](#) will be valid until the [ISession \[► 92\]](#) is disconnected via the [Disconnect. \[► 98\]](#) method or the [Dispose](#) method is called. Any possible resurrections after communication losses will be done transparently within the [IConnection \[► 79\]](#) so that the [IConnection \[► 79\]](#) instance and [ISession \[► 92\]](#) instance remains.

Reference

[Session Class \[► 107\]](#)

Also see about this

 [Session.Disconnect Method \[► 116\]](#)

6.1.14.3 Session.Disconnect Method

Disconnects the session from the target.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Disconnect()
```

Return Value

Type: [Boolean](#)

true if the [Session](#) [[▶ 107](#)] is disconnected, false otherwise (the connection was disconnected before)

Implements

[ISession.Disconnect.](#) [[▶ 98](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

Closes (and disposes) the underlying [IConnection](#) [[▶ 79](#)] The [Session](#) [[▶ 107](#)] itself will not be Disposed and can be reconnected.

Reference

[Session Class](#) [[▶ 107](#)]

6.1.14.2.6 Session.OnConnect Method

Handler function connecting the Session.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected virtual IConnection? OnConnect(
    bool reconnect
)
```

Parameters

reconnect	Type: System.Boolean if set to true [reconnect].
-----------	---

Return Value

Type: [IConnection \[► 79\]](#)

IConnection.

Reference

[Session Class \[► 107\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.14.2.7 Session.OnCreateSymbolServer Method

Handler function creating the [ISymbolServer \[► 2719\]](#)

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected abstract ISymbolServer OnCreateSymbolServer()
```

Return Value

Type: [ISymbolServer \[► 2719\]](#)

ISymbolServer.

Exceptions

Exception	Condition
SessionNotConnectedException [► 137]	The connection is not established!

Reference

[Session Class \[► 107\]](#)

6.1.14.2.8 Session.OnDisconnect Method

Handler function disconnecting the session.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected virtual bool OnDisconnect()
```

Return Value

Type: [Boolean](#)

true if the [Session \[► 107\]](#) is disconnected, false if the [Session \[► 107\]](#) was disconnected before.

Reference

[Session Class \[► 107\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.14.2.9 Session.OnGetAddress Method

Handler function getting the address of the session.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected abstract string OnGetAddress()
```

Return Value

Type: [String](#)

System.String.

Reference

[Session Class \[► 107\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.14.2.10 Session.EnsureConnection Method

Ensures, that the [ISession \[► 92\]](#) is connected and returns the [IConnection \[► 79\]](#) object.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public IConnection EnsureConnection()
```

Return Value

Type: [IConnection](#) [[▶ 79](#)]
 IConnection.

Implements

[ISession.EnsureConnection.](#) [[▶ 98](#)]

Exceptions

Exception	Condition
NotImplementedException	

Remarks

If the session is actually not connected an exception will be thrown.

Reference

[Session Class](#) [[▶ 107](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.14.2.11 Session.OnConnectionStateChanged Method

Handles the [\[E:ConnectionStateChanged\]](#) event.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected void OnConnectionStateChanged(
    Object? sender,
    ConnectionStateChangedEventArgs e
)
```

Parameters

sender	Type: System.Object The sender.
e	Type: TwinCAT.ConnectionStateChangedEventArgs [▶ 74] The ConnectionStateChangedEventArgs [▶ 74] instance containing the event data.

Reference

[Session Class](#) [[▶ 107](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.14.2.12 Session.ToString Method

Returns a [String](#) that represents this instance.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override string ToString()
```

Return Value

Type: [String](#)

A [String](#) that represents this instance.

Reference

[Session Class \[► 107\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.14.2.13 Session.ConnectAsync Method

Connects the session.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<IConnection> ConnectAsync(
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken The cancellation token that can be used by other objects or threads to receive notice of cancellation.
--------	--

Return Value

Type: [Task.IConnection \[► 79\]](#).

A [Task<IConnection>](#) representing the asynchronous operation.

Implements

[ISession.ConnectAsync\(CancellationToken\) \[► 99\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	
AdsException [► 61]	Connection to '{this.AddressSpecifier}' couldn't be established!

Remarks

The [IConnection](#) [▶ 79] will be valid until the [ISession](#) [▶ 92] is disconnected via the [Disconnect](#) [▶ 98] method or the [Dispose](#) method is called. Any possible resurrections after communication losses will be done transparently within the [IConnection](#) [▶ 79] so that the [IConnection](#) [▶ 79] instance and [ISession](#) [▶ 92] instance remains.

Reference

6.1.14.3 Session Events

The [Session](#) [▶ 107] type exposes the following members.

Events

	Name	Description
	ConnectionStateChanged [▶ 124]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed.

Reference

[Session Class](#) [► 107]

[TwinCAT Namespace](#) [► 59]

6.1.14.3.1 Session.ConnectionStateChanged Event

Occurs when connection status of the [IConnectionStateProvider](#) [► 89] has been changed.

Namespace: [TwinCAT](#) [► 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: [System.EventHandler.ConnectionStateChangedEventArgs](#) [► 74].

Implements

[IConnectionStateProvider.ConnectionStateChanged](#) [► 91]

Remarks

The Connection state changes only if the [IConnection](#) [► 79] is established / shut down or active communication is triggered by the User of the [IConnection](#) [► 79] object.

Examples

The following sample shows how to keep the [ConnectionState](#) [► 110] updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();

6.1.15 SessionConnectionStateChangedEventArgs Class

EventArguments for the ConnectionStatusChanged events.

Inheritance Hierarchy

- System.Object
- System.EventArgs
- TwinCAT.ConnectionStateChangedEventArgs [▶ 74]
- TwinCAT.SessionConnectionStateChangedEventArgs

Namespace: TwinCAT [▶ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class SessionConnectionStateChangedEventArgs : ConnectionStateChangedEventArgs
```

The SessionConnectionStateChangedEventArgs type exposes the following members.

Constructors

	Name	Description
	SessionConnectionStateChangedEventArgs(ConnectionState ChangedReason, ConnectionState, ConnectionState, ISession, IConnection) [▶ 127]	Initializes a new instance of the SessionConnectionStateChangedEventArgs class.
	SessionConnectionStateChangedEventArgs(ConnectionState ChangedReason,	Initializes a new instance of the SessionConnectionStateChangedEventArgs class.

	Name	Description
	ConnectionState , ConnectionState , ISession , IConnection , Exception) [▶ 128]	

Properties

	Name	Description
	Connection [▶ 129]	The connection
	Exception [▶ 77]	Exception, (only for Error [▶ 79]) (Inherited from ConnectionStateChangedEventArgs [▶ 74].)
	NewState [▶ 77]	New connection state (Inherited from ConnectionStateChangedEventArgs [▶ 74].)
	OldState [▶ 78]	Old connection state (Inherited from ConnectionStateChangedEventArgs [▶ 74].)
	Reason [▶ 78]	Reason for the event (Inherited from ConnectionStateChangedEventArgs [▶ 74].)
	Session [▶ 129]	The session

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

```
[SerializableAttribute]
public class SessionException : AdsException
```

The [SessionException](#) type exposes the following members.

Constructors

	Name	Description
	SessionException(String) [▶ 134]	Initializes a new instance of the SessionException class.
	SessionException(SerializationInfo, StreamingContext) [▶ 132]	Initializes a new instance of the SessionException class.
	SessionException(String, ISession) [▶ 133]	Initializes a new instance of the SessionException class.
	SessionException(String, ISession, Exception) [▶ 133]	Initializes a new instance of the SessionException class.

Properties

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception .)
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception .)
	HResult	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception .)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception .)
	Message	Gets a message that describes the current exception. (Inherited from Exception .)
	Session [▶ 135]	Gets the session.
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception .)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception .)
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception .)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)

	Name	Description
	GetObjectData [▶ 136]	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides Exception.GetObjectData(SerializationInfo, StreamingContext) .)
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

Events

	Name	Description
	SerializeObjectState	Obsolete. Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception .)

6.1.18 SessionProvider.TSession, TAddress, TSettings. Class

Abstract base class for a Custom Session provider

Inheritance Hierarchy

[System.Object](#)

TwinCAT.SessionProvider.TSession, TAddress, TSettings.

Namespace: [TwinCAT](#) ▶ [59](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public abstract class SessionProvider<TSession, TAddress, TSettings> : ISessionProvider<TSession, TAddress, TSettings>,
    ISessionProvider
where TSession : ISession
where TSettings : class
```

Type Parameters

TSession	SessionType
TAddress	Address type
TSettings	Communication settings type

The SessionProvider.TSession, TAddress, TSettings. type exposes the following members.

Constructors

	Name	Description
	SessionProvider.TSession, TAddress, TSettings.. [► 144]	Initializes a new instance of the SessionProvider.TSession, TAddress, TSettings. class.
	SessionProvider.TSession, TAddress, TSettings. (SessionProviderCapabilities) [► 145]	Initializes a new instance of the SessionProvider.TSession, TAddress, TSettings. class.

Properties

	Name	Description
	Capabilities [► 145]	Gets the capabilities.
	Name [► 146]	Gets the name of the SessionProvider

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object.)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)
	GetHashCode	Serves as the default hash function. (Inherited from Object.)
	GetType	Gets the Type of the current instance. (Inherited from Object.)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object.)
	ToString	Returns a string that represents the current object. (Inherited from Object.)

Fields

	Name	Description
 	s_self [▶ 147]	Singleton Instance.

6.1.20 SymbolLoaderSettings Class

Settings object for the SymbolLoader initialization.

Inheritance Hierarchy

[System.Object](#)

 TwinCAT.SymbolLoaderSettings

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class SymbolLoaderSettings : ISymbolLoaderSettings,
    IValueFactorySettings, IAdsClientSettings
```

The SymbolLoaderSettings type exposes the following members.

Constructors

	Name	Description
	SymbolLoaderSettings(SymbolsLoadMode) [► 151]	Initializes a new instance of the SymbolLoaderSettings class with IndexGroupOffsetPreferred [► 3228] .

	Name	Description
	SymbolLoaderSettings(SymbolsLoadMode, ValueAccessMode) [▶ 151]	Initializes a new instance of the SymbolLoaderSettings class.
	SymbolLoaderSettings(SymbolsLoadMode, ValueCreationMode, ValueAccessMode) [▶ 152]	Initializes a new instance of the SymbolLoaderSettings class.

Properties

	Name	Description
	AutomaticReconnection [▶ 153]	Gets or sets a value indicating whether Disconnect connections can be reconnected.
	Default [▶ 154]	Gets the default settings object for standard symbols.
	DefaultDynamic [▶ 154]	Gets the default settings object for Dynamic symbols.
	ExpandArrayValues [▶ 158]	Gets or sets a value indicating whether the Value Factory automatically expands ArrayValues to its Elements (Default: true)
	NonCachedArrayElements [▶ 155]	Gets or sets the setting to create ArrayElements "On-The-Fly" (Default True)
	SymbolsLoadMode [▶ 155]	Gets or sets the symbols load mode.
	ValueAccessMode [▶ 156]	Gets or sets the value access mode.
	ValueCreation [▶ 156]	Gets or sets the value creation mode.
	ValueUpdateMode [▶ 157]	Gets or sets the value update mode.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)

	Name	Description
	GetType	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)
	MemberwiseClone	Creates a shallow copy of the current <u>Object</u> . (Inherited from <u>Object</u> .)
	ToString	Returns a string that represents the current object. (Inherited from <u>Object</u> .)

Remarks

This settings object is used for the initialization of the internal Symbol loader object.

-  [ValueUpdateMode Enumeration](#) [▶ 159]
-  [ValueUpdateMode Enumeration](#) [▶ 159]

6.1.20.2.9 SymbolLoaderSettings.ExpandArrayValues Property

Gets or sets a value indicating whether the Value Factory automatically expands ArrayValues to its Elements (Default: true)

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public bool ExpandArrayValues { get; set; }
```

Property Value

Type: [Boolean](#)

true if [create array elements]; otherwise, false.

Implements

[IValueFactorySettings.ExpandArrayValues](#) [▶ 177]

Remarks

Actually, this takes place when DynamicSymbols are created. Array Elements are created on-access to the Array, so that they can be accessed by a JSON Serializer without further expanding. If this property is set to false, then an array element is only created on access!

Enum SymbolsLoadMode

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum SymbolsLoadMode
```

Members

	Member name	Value	Description
	Flat	0	Loads the Symbols organized as Flat List
	VirtualTree	1	Loads the Symbols organized as Virtual tree (Symbol Parent - Child relationships)
	DynamicTree	2	Loads the Symbols as a Virtual tree with Dynamic Symbols (Only available within versions > 4.X of this ADS Api)

Reference

[TwinCAT Namespace \[▶ 59\]](#)

6.1.22 ValueUpdateMode Enumeration

Value Update Mode.

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
public enum ValueUpdateMode
```

Members

	Member name	Value	Description
	None	0	No automatic Value Update / Uninitialized
	Immediately	1	Update Value immediately on property set access.
	Triggered	2	Triggers the ValueUpdate explicitly

Remarks

Mode	Description
Immediately	Writes the values of this DynamicValue instantly when setting its value or the value of its child members/elements.
Triggered	Caches internally the value of this DynamicValue until the DynamicValue.Write method is called. This reduces ADS roundtrips, if one or more member/element values should be changed. Furthermore the write on the destination system happens consistently in one ADS Write operation, which could be important for dependent properties/members/elements.

ADS Communication statistics

Inheritance Hierarchy

[System.Object](#)

TwinCAT.AdsCommunicationStatistics

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public class AdsCommunicationStatistics
```

The AdsCommunicationStatistics type exposes the following members.

Properties

Name	Description
AccessWaitTime [► 162]	Gets the wait time for the next access (Resurrection time) if in Lost [► 72] .
CommunicationErrorsSinceLastSucceeded [► 163]	Gets the number of communication errors since the last successful access
ConnectionActiveSince [► 163]	Gets the DateTime of the last connection activation.
ConnectionEstablishedAt [► 164]	Gets the UTC time when the current connection was established.
ConnectionLostAt [► 164]	Gets the connection lost time.
LastAccessAt [► 164]	Gets the Time of the last read/write access
LastCommunicationErrorAt [► 165]	Gets the last tripping error time.
LastErrorAt [► 165]	Get the Time of the last occurred Error (Error response codes and tripping errors)

	Name	Description
	LastErrorCode [▶ 166]	Gets error code of the last access.
	LastSucceededAt [▶ 166]	Gets the Date/Time of the last succeeded ADS communication/Roundtrip.
	SessionEstablishedAt [▶ 167]	Gets the UTC time when the session was established.
	TotalCommunicationErrors [▶ 167]	Gets the communication error count.
	TotalConnectionLosses [▶ 167]	Gets the connection lost count.
	TotalCycles [▶ 168]	Gets the total cycles/requests done so far by this session.
	TotalErrors [▶ 168]	Gets the total number of negative ADS responses.
	TotalResurrections [▶ 169]	Gets the number of resurrections on the AdsConnection [▶ 412]

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

These statistics can be used for communication diagnosis. They contain Error/Succeed counts as well as Resurrection infos.

6.1.23.1 AdsCommunicationStatistics Properties

The [AdsCommunicationStatistics](#) [▶ 160] type exposes the following members.

Properties

	Name	Description
	AccessWaitTime [▶ 162]	Gets the wait time for the next access (Resurrection time) if in Lost [▶ 72].

	Name	Description
	CommunicationErrorsSinceLastSucceeded [▶ 163]	Gets the number of communication errors since the last successful access
	ConnectionActiveSince [▶ 163]	Gets the DateTime of the last connection activation.
	ConnectionEstablishedAt [▶ 164]	Gets the UTC time when the current connection was established.
	ConnectionLostAt [▶ 164]	Gets the connection lost time.
	LastAccessAt [▶ 164]	Gets the Time of the last read/write access
	LastCommunicationErrorAt [▶ 165]	Gets the last tripping error time.
	LastErrorAt [▶ 165]	Get the Time of the last occurred Error (Error response codes and tripping errors)
	LastErrorCode [▶ 166]	Gets error code of the last access.
	LastSucceededAt [▶ 166]	Gets the Date/Time of the last succeeded ADS communication/Roundtrip.
	SessionEstablishedAt [▶ 167]	Gets the UTC time when the session was established.
	TotalCommunicationErrors [▶ 167]	Gets the communication error count.
	TotalConnectionLosses [▶ 167]	Gets the connection lost count.
	TotalCycles [▶ 168]	Gets the total cycles/requests done so far by this session.
	TotalErrors [▶ 168]	Gets the total number of negative ADS responses.
	TotalResurrections [▶ 169]	Gets the number of resurrections on the AdsConnection [▶ 412]

Reference

[AdsCommunicationStatistics Class](#) [[▶ 160](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.23.1.1 **AdsCommunicationStatistics.AccessWaitTime** Property

Gets the wait time for the next access (Resurrection time) if in [Lost](#) [[▶ 72](#)].

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public TimeSpan AccessWaitTime { get; }
```

Property Value

Type: [TimeSpan](#)

The wait time if in [Lost](#) [[▶ 72](#)] otherwise **TimeSpan.Zero**.

Reference

[AdsCommunicationStatistics Class](#) [[▶ 160](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.23.1.2 **AdsCommunicationStatistics.CommunicationErrorsSinceLastSucceeded Property**

Gets the number of communication errors since the last successful access

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int CommunicationErrorsSinceLastSucceeded { get; }
```

Property Value

Type: [Int32](#)

Remarks

Only communication (tripping, TrippingErrors) errors count here. A succeeded roundtrip (non tripping) sets this value to zero.

Reference

[AdsCommunicationStatistics Class](#) [[▶ 160](#)]

[TwinCAT Namespace](#) [[▶ 59](#)]

6.1.23.1.3 **AdsCommunicationStatistics.ConnectionActiveSince Property**

Gets the DateTime of the last connection activation.

Namespace: [TwinCAT](#) [[▶ 59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ConnectionActiveSince { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).
Connection active time.

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace](#) [[▶](#) 59]

6.1.23.1.4 **AdsCommunicationStatistics.ConnectionEstablishedAt** Property

Gets the UTC time when the current connection was established.

Namespace: [TwinCAT](#) [[▶](#) 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ConnectionEstablishedAt { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).
The connection established at.

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace](#) [[▶](#) 59]

6.1.23.1.5 **AdsCommunicationStatistics.ConnectionLostAt** Property

Gets the connection lost time.

Namespace: [TwinCAT](#) [[▶](#) 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ConnectionLostAt { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).
The connection lost time.

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace](#) [[▶](#) 59]

6.1.23.1.6 **AdsCommunicationStatistics.LastAccessAt** Property

Gets the Time of the last read/write access

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? LastAccessAt { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).

DateTime of the last access.

Reference

[AdsCommunicationStatistics Class \[► 160\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.23.1.7 **AdsCommunicationStatistics.LastCommunicationErrorAt Property**

Gets the last tripping error time.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset LastCommunicationErrorAt { get; }
```

Property Value

Type: [DateTimeOffset](#)

The last tripping error time.

Remarks

Tripping errors are errors that are preventing the ADS Session to communicate until a resurrection occurs. These are all errors that are classified that the target system could not be reached.

Reference

[AdsCommunicationStatistics Class \[► 160\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.23.1.8 **AdsCommunicationStatistics.LastErrorAt Property**

Get the Time of the last occurred Error (Error response codes and tripping errors)

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset LastErrorAt { get; }
```

Property Value

Type: [DateTimeOffset](#)

The error count since last access.

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace](#) [[▶](#) 59]

6.1.23.1.9 **AdsCommunicationStatistics.LastErrorCode** Property

Gets error code of the last access.

Namespace: [TwinCAT](#) [[▶](#) 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode LastErrorCode { get; }
```

Property Value

Type: [AdsErrorCode](#) [[▶](#) 664]

The last succeeded access.

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace](#) [[▶](#) 59]

6.1.23.1.10 **AdsCommunicationStatistics.LastSucceededAt** Property

Gets the Date/Time of the last succeeded ADS communication/Roundtrip.

Namespace: [TwinCAT](#) [[▶](#) 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? LastSucceededAt { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).

The Date/Time value.

Remarks

A successful communication is also a negative ADS response (not [NoError](#) [[▶](#) 664]) that is not classified as communication/tripping error (TrippingErrors).

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) 160]

[TwinCAT Namespace \[► 59\]](#)

6.1.23.1.11 **AdsCommunicationStatistics.SessionEstablishedAt** Property

Gets the UTC time when the session was established.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset SessionEstablishedAt { get; }
```

Property Value

Type: [DateTimeOffset](#)

The session established at.

Reference

[AdsCommunicationStatistics Class \[► 160\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.23.1.12 **AdsCommunicationStatistics.TotalCommunicationErrors** Property

Gets the communication error count.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalCommunicationErrors { get; }
```

Property Value

Type: [Int32](#)

The communication error count.

Remarks

The communication errors are the errors that are classified as communication tripping errors (Network communication problems e.g. device not reachable, TrippingErrors)

Reference

6.1.23.1.14 **AdsCommunicationStatistics.TotalCycles** Property

Gets the total cycles/requests done so far by this session.

Namespace: [TwinCAT](#) [[▶](#) [59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalCycles { get; }
```

Property Value

Type: [Int32](#)

The total cycles / requests

Reference

[AdsCommunicationStatistics Class](#) [[▶](#) [160](#)]

[TwinCAT Namespace](#) [[▶](#) [59](#)]

6.1.23.1.15 **AdsCommunicationStatistics.TotalErrors** Property

Gets the total number of negative ADS responses.

Namespace: [TwinCAT](#) [[▶](#) [59](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalErrors { get; }
```

Property Value

Type: [Int32](#)

The total number of negative ADS responses.

Remarks

This number includes all communication/tripping errors and succeeded negative ADS responses.

Reference

[AdsCommunicationStatistics Class \[► 160\]](#)

6.1.23.2 AdsCommunicationStatistics Methods

The [AdsCommunicationStatistics \[► 160\]](#) type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Reference

[AdsCommunicationStatistics Class \[► 160\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.24 RouteAccessType Enumeration

Specifies the method to determine the Remote routes list.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public enum RouteAccessType
```

Members

	Member name	Value	Description
	None	0	None / Uninitialized
	Actual	1	Gets the actual Remote Routes used by the TwinCAT Router. This can contain all 'virtual' Routes that are superimposed by a valid MQTT Publisher configuration. This list doesn't contain configuration data of the single routes.
	Registry	2	The static routes are the Route configurations stored in the Registry (TC2 and Windows Platform only), Obsolete
	Configured	3	Gets the configured Routes from the TwinCAT System Server. These Routes contain all the standard Routes, the configured AdsSecure Routes and the MQTT Provider (only the root). Configuration data of the Route objects are available.
	Merged	4	Produces a merged list of all available RouteTargets with configuration data (merged from Actual and Configured).
	Default	4	The default (actually Merged)

Reference

[TwinCAT Namespace \[► 59\]](#)

6.1.25 RoutePersistenceType Enumeration

Route persistence type (Static or Temporary)

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public enum RoutePersistenceType
```

Members

	Member name	Value	Description
	None	0	None
	Server	0	Server
	Temporary	1	Temporary route
	Static	2	Static route

6.1.26 HandleBagNotInitializedException Class

Class ClientNotConnectedException

Inheritance Hierarchy

System.Object
 System.Exception
 TwinCAT.AdsException [▶ 61]
 TwinCAT.HandleBagNotInitializedException

Namespace: [TwinCAT](#) [▶ 59]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
[SerializableAttribute]
public class HandleBagNotInitializedException : AdsException
```

The HandleBagNotInitializedException type exposes the following members.

Constructors

	Name	Description
	HandleBagNotInitializedException . [▶ 173]	Initializes a new instance of the HandleBagNotInitializedException class.
	HandleBagNotInitializedException(SerializationInfo, StreamingContext) [▶ 173]	Initializes a new instance of the HandleBagNotInitializedException class.

Properties

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception .)
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception .)
	HResult	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception .)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception .)
	Message	Gets a message that describes the current exception. (Inherited from Exception .)
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception .)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception .)

	Name	Description
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception .)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetObjectData	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Inherited from Exception .)
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

Events

	Name	Description
	SerializeObjectState	Obsolete. Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception .)

6.1.27.1.1 IAdsClientSettings.AutomaticReconnection Property

Gets or sets a value indicating whether Disconnect connections can be reconnected.

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
bool AutomaticReconnection { get; set; }
```

Property Value

Type: [Boolean](#)

true if Disconnect connections can be reconnected; otherwise, false.

Reference

[IAdsClientSettings Interface \[► 175\]](#)

[TwinCAT Namespace \[► 59\]](#)

6.1.28 IValueFactorySettings Interface

Interface IValueFactorySettings

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IValueFactorySettings
```

The IValueFactorySettings type exposes the following members.

Properties

	Name	Description
	ExpandArrayValues [► 177]	Gets or sets a value indicating whether the Value Factory automatically expands ArrayValues to its Elements (Default: true)
	NonCachedArrayElements [► 177]	Gets or sets the setting to create ArrayElements "On-The-Fly" (Default True)
	ValueAccessMode [► 178]	Gets or sets the value access mode.
	ValueCreation [► 178]	Gets or sets the value creation mode.
	ValueUpdateMode [► 179]	Gets or sets the value update mode.

Reference

[TwinCAT Namespace \[► 59\]](#)

6.1.28.1 IValueFactorySettings Properties

The [IValueFactorySettings](#) [▸ 176] type exposes the following members.

Properties

	Name	Description
	ExpandArrayValues [▸ 177]	Gets or sets a value indicating whether the Value Factory automatically expands ArrayValues to its Elements (Default: true)
	NonCachedArrayElements [▸ 177]	Gets or sets the setting to create ArrayElements "On-The-Fly" (Default True)
	ValueAccessMode [▸ 178]	Gets or sets the value access mode.
	ValueCreation [▸ 178]	Gets or sets the value creation mode.
	ValueUpdateMode [▸ 179]	Gets or sets the value update mode.

Reference

[IValueFactorySettings Interface](#) [▸ 176]

[TwinCAT Namespace](#) [▸ 59]

6.1.28.1.1 IValueFactorySettings.ExpandArrayValues Property

Gets or sets a value indicating whether the Value Factory automatically expands ArrayValues to its Elements (Default: true)

Namespace: [TwinCAT](#) [▸ 59]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
bool ExpandArrayValues { get; set; }
```

Property Value

Type: [Boolean](#)

true if [create array elements]; otherwise, false.

Remarks

Actually, this takes place when DynamicSymbols are created. Array Elements are created on-access to the Array, so that they can be accessed by a JSON Serializer without further expanding. If this property is set to false, then an array element is only created on access!

Reference

[IValueFactorySettings Interface](#) [▸ 176]

[TwinCAT Namespace](#) [▸ 59]

6.1.28.1.2 IValueFactorySettings.NonCachedArrayElements Property

Gets or sets the setting to create ArrayElements "On-The-Fly" (Default True)

Namespace: [TwinCAT \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
bool NonCachedArrayElements { get; set; }
```

Property Value

Type: [Boolean](#)

The value access mode.

Reference

[IValueFactorySettings Interface \[► 176\]](#)

[TwinCAT Namespace \[► 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ValueCreationModes ValueCreation { get; set; }
```

Property Value

Type: [ValueCreationModes \[► 3223\]](#)

The dynamic value mode.

Reference

[IValueFactorySettings Interface \[▶ 176\]](#)

[TwinCAT Namespace \[▶ 59\]](#)

6.1.28.1.5 IValueFactorySettings.ValueUpdateMode Property

Gets or sets the value update mode.

Namespace: [TwinCAT \[▶ 59\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
ValueUpdateMode ValueUpdateMode { get; set; }
```

Property Value

Type: [ValueUpdateMode \[▶ 3229\]](#)

The value update mode.

Remarks

Mode	Description
Immediately [▶ 3229]	Writes the values of this DynamicValue instantly when setting its value or the value of its child members/elements.
Triggered [▶ 3229]	Caches internally the value of this DynamicValue until the DynamicValue.Write method is called. This reduces ADS roundtrips, if one or more member/element values should be changed. Furthermore the write on the destination system happens consistently in one ADS Write operation, which could be important for dependent properties/members/elements.

6.2 TwinCAT.Ads Namespace

ADS root namespace.

Classes

	Class	Description
	AdsClient [▶ 183]	ADS Client / ADS Communication object.
	AdsClientExtensions [▶ 1215]	Class AdsClientExtensions.
	AdsClientSettings [▶ 399]	Settings object for the AdsClient [▶ 183] class.
	AdsConnection [▶ 412]	ADS Connection class

	Class	Description
	AdsDataTypeArrayInfo [▶ 660]	Array definition for a single dimension.
	AdsErrorCodeExtensions [▶ 680]	Class AdsErrorCodeExtensions.
	AdsErrorException [▶ 682]	The exception that is thrown when an ADS error occurs.
	AdsInvalidNotificationException [▶ 690]	This AdsInvalidNotificationException is created if the length of the notification data is 0. This indicates that the notification handle is not valid any more. This exception is passed to the AdsNotificationErrorEvent.
	AdsNotificationErrorEventArgs [▶ 694]	Arguments for the AdsNotificationError [▶ 993] events.
	AdsNotificationEventArgs [▶ 695]	Event argument class for AdsNotification [▶ 991] events.
	AdsNotificationEventArgs [▶ 699]	Arguments for AdsNotificationEx [▶ 993] events.
	AdsNotificationsUnregisteredEventArgs [▶ 1228]	Class AdsNotificationsUnregisteredEventArgs. This class cannot be inherited. Implements the EventArgs
 	AdsSession [▶ 701]	AdsSession class
	AdsSessionBase [▶ 716]	Abstract base class for ADS Sessions.
	AdsStateChangedEventArgs [▶ 729]	Arguments for the AdsStateChanged [▶ 1061] event.
	AdsStateChangedEventArgs2 [▶ 732]	Event Arguments for AdsStateChanged events.
	AdsSumCommandException [▶ 735]	The exception that is thrown when an ADS SumCommandBase error occurs.
	AdsSymbolVersionChangedEventArgs [▶ 739]	Arguments for the AdsSymbolVersionChanged [▶ 1065] event.
	AdsVersion [▶ 743]	The structure contains the version number, revision number and build number.
	AmsAddress [▶ 752]	Ams/Ads Address
	AmsNetId [▶ 767]	AMS/ADS Net ID
	AmsRouterNotificationEventArgs [▶ 798]	Arguments for the IRouterNotificationProvider [▶ 1099] events.

	Class	Description
	DeviceInfo [▶ 801]	The structure contains the name and the version information of the device.
	Notification [▶ 1100]	Class Notification. Implements the INotification [▶ 1096]
	NotificationSettings [▶ 1106]	Notification communication settings
	ResultAds [▶ 1116]	Base class for an (asynchronous) ADS Task Result
	ResultAnyValue [▶ 1129]	Result object for asynchronous reading an 'AnyValue'/Primitive Value via tasks.
	ResultDeviceInfo [▶ 1132]	Ads Task Result for DeviceInfo [▶ 1134] requests (async operations).
	ResultHandle [▶ 1136]	Result object for asynchronous registering an ADS Handle via tasks.
	ResultRead [▶ 1143]	Asynchronous ADS Read result.
	ResultReadAdsState [▶ 1146]	Result object for asynchronous reading AdsStates via tasks.
	ResultReadBytes [▶ 1150]	ADS Task Result returning Read data for async Read operations.
	ResultReadDeviceState [▶ 1157]	Result object for asynchronous ADS ReadDeviceState tasks.
	ResultReadWrite [▶ 1163]	Result object for asynchronous ADS ReadWrite tasks.
	ResultReadWriteBytes [▶ 1170]	Result object for asynchronous ADS ReadWrite tasks.
	ResultRpcMethod [▶ 1176]	Class representing a result of an asynchronous RpcMethod call. Implements the ResultAds [▶ 1116]
	ResultValue.TValue. [▶ 1181]	ADS Result object returning a generic value result (TValue) (asynchronous read). Implements the ResultAds [▶ 1116]
	ResultValue2.I, V. [▶ 1234]	Result object of an asynchronous read. Implements the ResultAccess [▶ 3197]
	ResultWrite [▶ 1187]	Result for asynchronous ADS write tasks.
	ResultWriteControl [▶ 1236]	Class ResultWriteControl. Implements the ResultAds [▶ 1116]
	SessionSettings [▶ 1193]	Session settings class
	TaskExtensions [▶ 1209]	TaskExtensions for Task Cancellation and Timeout
	ValueNotificationEventArgs.T. [▶ 1213]	Arguments for AdsNotificationEx [▶ 993] events.

Structures

	Structure	Description
	StateInfo [▶ 1200]	The structure contains the ADS state and device state.

Interfaces

	Interface	Description
	IAdsAnyAccess [▶ 804]	Interface for accessing ADS 'Any' objects.
	IAdsConnectAddresses [▶ 835]	Interface for method to connect the ADS client via AMS Address.
	IAdsConnection [▶ 876]	ADS Connection interface
	IAdsDisposableConnection [▶ 915]	Interface IAdsDisposableConnection Implements the IAdsConnectAddresses [▶ 835] Implements the IRouterNotificationProvider [▶ 1099] Implements the IAdsSymbolChangedProvider [▶ 1061] Implements the IDisposable
	IAdsHandle [▶ 954]	Interface for ADS access via variable handle
	IAdsNotifications [▶ 966]	Interface for Notification management.
	IAdsReadWrite [▶ 995]	Interface for ADS Read/Write access via IndexGroup / IndexOffset
	IAdsReadWrite2 [▶ 1000]	Interface for ADS Read/Write access via IndexGroup / IndexOffset
	IAdsReadWriteTimeoutAccess [▶ 1005]	Interface IAdsReadWriteTimeoutAccess
	IAdsRpclInvoke [▶ 1012]	Interface IAdsRpclInvoke
	IAdsSession [▶ 1033]	Interface IAdsSession
	IAdsSessionSettings [▶ 1037]	Interface for ADS Session Settings
	IAdsStateControl [▶ 1039]	Interface for reading and controlling the ADS state.
	IAdsStateControlTimeout [▶ 1048]	Interface IAdsStateControlTimeout
	IAdsStateObserver [▶ 1054]	Interface for an AdsState observer
	IAdsStateProvider [▶ 1056]	Interface IAdsStateProvider
	IAdsSymbolChangedProvider [▶ 1061]	Interface IAdsSymbolChangedProvider
	IAdsSymbolicAccess [▶ 1065]	Interface for symbolic ads access.
	INotification [▶ 1096]	Common INotification interface
	INotificationSettings [▶ 1098]	Interface for Notification Settings Implements the IComparable.T .
	IRouterNotificationProvider [▶ 1099]	Interface for AMS Router Notifications.

Enumerations

	Enumeration	Description
	AdsCommandId [▶ 404]	AdsCommandId Enumeration
	AdsDataTyped [▶ 663]	ADS data types.
	AdsErrorCode [▶ 664]	ADS request return codes.
	AdsState [▶ 729]	Describes the AdsState.
	AdsStateCommand [▶ 1233]	Describes the AdsState Commands
	AdsTransMode [▶ 740]	ADS Transmission Mode for ADS Notifications.
	AmsPort [▶ 795]	Ams Ports Definitions.
	AmsPortRange [▶ 1233]	Defines ranges of AmsPorts . [▶ 795]
	AmsRouterState [▶ 800]	State of the AMS Router.
	IndexGroupSymbol Access [▶ 1231]	ADS IndexGroups defined for ADS Symbol Handling
	TransportProtocols [▶ 1212]	Enum ADS TransportProtocol

6.2.1 AdsClient Class

ADS Client / ADS Communication object.

Inheritance Hierarchy

System.Object
TwinCAT.Ads.AdsClient

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public sealed class AdsClient : IAdsDisposableConnection,
    IAdsConnectAddress, IAdsConnection, IConnection, IConnectionStateProvider, IAdsNotifications,
    IAdsSymbolicAccess, IAdsAnyAccess, IAdsHandle, IAdsReadWrite2, IAdsReadWrite,
    IAdsStateProvider, IAdsStateControl, IAdsSymbolChangedProvider, IAdsRpcInvoke, IRouterNotificati
onProvider,
    IDisposable
```

The AdsClient type exposes the following members.

Constructors

	Name	Description
	AdsClient [▶ 397]	Initializes a new instance of the AdsClient class.
	AdsClient(AdsClientSettings) [▶ 397]	Initializes a new instance of the AdsClient class with the specified settings.
	AdsClient(ILogger) [▶ 397]	Initializes a new instance of the AdsClient class.
	AdsClient(ISession, ILogger) [▶ 398]	Initializes a new instance of the AdsClient class bound to a session.
	AdsClient(ISession, AdsClientSettings, ILogger) [▶ 398]	Initializes a new instance of the AdsClient class.

Properties

	Name	Description
	Address [▶ 209]	Gets the target AmsAddress [▶ 752] of of the established ADS connection (Destination side).
	ClientAddress [▶ 209]	Get the client AmsAddress [▶ 752] (Source side).
	DefaultValueEncoding [▶ 209]	Gets the default value encoding.
	Id [▶ 210]	Gets the AdsClient Identifier.
	IsConnected [▶ 210]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.
	IsDisposed [▶ 211]	Gets a value indicating whether this instance is disposed.
	IsLocal [▶ 211]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	Logger [▶ 213]	Gets the logger interface.
	Session [▶ 212]	Gets the session that initiated this IConnection [▶ 79]
	SymbolEncoding [▶ 212]	Gets the symbol encoding.
	Timeout [▶ 213]	Sets the timeout for the ads communication. Unit is in ms.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 233]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotification(UInt32, UInt32,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

	Name	Description
	Int32, NotificationSettings, Object) [▶ 234]	
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationTok en) [▶ 236]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationTok en) [▶ 237]	Adds a device notification as an asynchronous operation.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 239]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 240]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 241]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 242]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationTok en) [▶ 243]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.

	Name	Description
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32, CancellationToken) [▶ 245]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	CleanupSymbolTable [▶ 246]	Clears the internal symbol cache.
	Close [▶ 247]	Closes this AdsClient
	Connect(AmsAddress) [▶ 248]	Connects the target
	Connect(AmsPort) [▶ 249]	Connects to the local target ADS Device.
	Connect(Int32) [▶ 247]	Connects to the local target ADS Device.
	Connect(AmsNetId, Int32) [▶ 250]	Connects to the target ADS Device.
	Connect(AmsNetId, AmsPort) [▶ 250]	Connects to the target ADS Device.
	Connect(String, Int32) [▶ 249]	Connects to the target ADS Device.
	ConnectAndWaitAsync [▶ 251]	Connects to the target address and waits until the AdsClient is disconnected asynchronously.
	CreateVariableHandle [▶ 251]	Determines the Symbol handle by its instance path synchronously.
	CreateVariableHandleAsync [▶ 252]	Determines the Symbol handle by its instance path asynchronously.
	DeleteDeviceNotification [▶ 253]	Deletes a registered notification.
	DeleteDeviceNotificationAsync [▶ 254]	Deletes a registered notification asynchronously.
	DeleteVariableHandle [▶ 255]	Releases the specified symbol/variable handle synchronously.
	DeleteVariableHandleAsync [▶ 255]	Releases the specified symbol/variable handle asynchronously.
	Disconnect [▶ 256]	Disconnects this AdsClient from the local ADS router.
	Dispose [▶ 257]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 257]	Finalizes an instance of the AdsClient class. (Overrides Object.Finalize .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, CancellationToken) [▶ 269]	invoke RPC method as an asynchronous operation.
 	InvokeRpcMethodAsync(String, String, Object, CancellationToken) [▶ 264]	Invokes the specified RPC Method asynchronously
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 268]	invoke RPC method as an asynchronous operation.
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 266]	Invokes the specified RPC Method asynchronously
	Read(UInt32, Memory.Byte) [▶ 271]	Reads data synchronously from an ADS device and writes to the specified readBuffer.
	Read(UInt32, UInt32, Memory.Byte) [▶ 272]	Reads data synchronously from an ADS device and writes it to the given readBuffer
	ReadAny(UInt32, Type) [▶ 275]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, Type, Int32) [▶ 276]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type) [▶ 278]	Reads data synchronously from an ADS device and writes it to an object.

	Name	Description
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 279]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32) [▶ 273]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, .Int32.) [▶ 274]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32) [▶ 275]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 277]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 283]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 285]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 287]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 287]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 281]	Reads data synchronously from an ADS device.
	ReadAnyAsync.T.(UInt32, .Int32., CancellationToken) [▶ 282]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T.(UInt32, UInt32, CancellationToken) [▶ 284]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T.(UInt32, UInt32, .Int32., CancellationToken) [▶ 285]	Reads data asynchronously from an ADS device and writes it to an object.

	Name	Description
	ReadAnyString(UInt32, Int32, Encoding) [▶ 289]	Reads a string from the specified symbol/variable.
	ReadAnyString(UInt32, UInt32, Int32, Encoding) [▶ 289]	Reads as string from a specified address.
	ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [▶ 291]	Reads a string asynchronously from the specified symbol/variable
	ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 292]	Reads a string from a specified address asynchronously.
	ReadAsync(UInt32, Memory.Byte, CancellationToken) [▶ 294]	Reads the value data of the symbol asynchronously into the readBuffer.
	ReadAsync(UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 295]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadDataType [▶ 296]	Call this method to obtain information about the specified data type.
	ReadDataTypeAsync [▶ 297]	read data type as an asynchronous operation.
	ReadDeviceInfo [▶ 298]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsync [▶ 298]	Reads the identification and version number of an ADS server.
	ReadState [▶ 299]	Reads the ADS status and the device status from an ADS server.
	ReadStateAsync [▶ 299]	Reads the ADS status and the device status from an ADS server.
	ReadSymbol [▶ 300]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadSymbolAsync [▶ 301]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadValue(ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue(String, Type) [▶ 304]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.

	Name	Description
	ReadValue.T. (ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) [▶ 302]	Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.
	ReadValueAsync(ISymbol, CancellationToken) [▶ 306]	Reads the value of a symbol asynchronously and returns it as an object. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValueAsync(String, Type, CancellationToken) [▶ 308]	Reads the value of a symbol asynchronously.
	ReadValueAsync.TV alue.(ISymbol, CancellationToken) [▶ 307]	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync.TV alue.(String, CancellationToken) [▶ 306]	Reads the value of a symbol asynchronously.
	ReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.B yte.) [▶ 310]	Writes data synchronously to an ADS device and then Reads data from that target.
	ReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.B yte.) [▶ 311]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer
	ReadWriteAsync(UInt32, Memory.Byte., ReadOnlyMemory.B yte, CancellationToken) [▶ 314]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	ReadWriteAsync(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.B yte, CancellationToken) [▶ 315]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	RegisterAdsStateChangedAsync [▶ 316]	Registers for AdsStateChanged [▶ 392] events as an asynchronous operation.

	Name	Description
	RegisterSymbolVersionChanged [▶ 387]	Registers for an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	RegisterSymbolVersionChangedAsync [▶ 317]	Registers for an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	ToString	Returns a string that represents the current object. (Inherited from Object .)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 318]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 319]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32, UInt32.) [▶ 321]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32, UInt32.) [▶ 322]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	TryCreateVariableHandle [▶ 323]	Determines the Symbol handle by its instance path synchronously.
	TryDeleteDeviceNotification(UInt32) [▶ 325]	Deletes a registered notification.
	TryDeleteDeviceNotification(UInt32, Int32) [▶ 325]	Deletes a registered notification.
	TryDeleteVariableHandle [▶ 326]	Releases the specified symbol/variable handle synchronously.

	Name	Description
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 328]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, Object, Object, Object, Object.) [▶ 330]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 333]	Tries the invoke RPC method.
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 331]	Invokes the RPC Method
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 337]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 338]	Reads value data from the specified IndexGroup/IndexOffset to the specified memory location.
	TryReadDataType [▶ 338]	Call this method to obtain information about the specified data type.
	TryReadState [▶ 339]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadSymbol [▶ 340]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	TryReadValue(ISymbol, Object.) [▶ 342]	Reads the value of a symbol and returns it as an object.
	TryReadValue(String, Type, Object.) [▶ 344]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T.(ISymbol, T.) [▶ 343]	Reads the value of a symbol and returns it as an object.

	Name	Description
	TryReadValue.T. (String, T.) [▶ 341]	Reads the value of a symbol and returns the value as object.
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 346]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 347]	Writes data synchronously to an ADS device and reads data from that device.
	TryResurrect [▶ 348]	Resurrects the connection
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 350]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 351]	Writes data synchronously to an ADS device.
	TryWriteControl(StateInfo) [▶ 352]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 353]	Changes the ADS status and the device status of an ADS server.
	TryWriteValue(ISymbol, Object) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 354]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T. (ISymbol, T) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T. (String, T) [▶ 355]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	UnregisterAdsStateChangedAsync [▶ 357]	unregister ads state changed as an asynchronous operation.
	UnregisterSymbolVersionChanged [▶ 388]	Unregisters the symbol version changed.

	Name	Description
	UnregisterSymbolVersionChangedAsync [▶ 358]	Unregisters from an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	Write(UInt32, ReadOnlyMemory.BYTE) [▶ 361]	Writes data synchronously to an ADS device.
	Write(UInt32, UInt32) [▶ 360]	Triggers a 'Write' call to the ADS device at the specified address.
	Write(UInt32, UInt32, ReadOnlyMemory.BYTE) [▶ 361]	Writes data synchronously to an ADS device.
	WriteAny(UInt32, Object) [▶ 362]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, Object, .Int32) [▶ 363]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAny(UInt32, UInt32, Object) [▶ 364]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, UInt32, Object, .Int32) [▶ 364]	Writes an object synchronously to an ADS device.
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 366]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, Object, .Int32, CancellationToken) [▶ 367]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 368]	Write the value of an Anytype (Primitive type) asynchronously.
	WriteAnyAsync(UInt32, UInt32, Object, .Int32, CancellationToken) [▶ 369]	Write the value of an Anytype (Primitive type) asynchronously.
	WriteAnyStringAsync(String, String)	Writes the string (Potentially unsafe!)

	Name	Description
	Int32, Encoding, CancellationToken [▶ 370]	
	WriteAnyStringAsync(UInt32, String, Int32, Encoding, CancellationToken) [▶ 371]	Writes the string (Potentially unsafe!)
	WriteAsync(UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 375]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.
	WriteAsync(UInt32, UInt32, CancellationToken) [▶ 373]	Triggers a write call at the specified IndexGroup/IndexOffset asynchronously.
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 375]	Writes the data / Value asynchronously into the specified writeBuffer.
	WriteControl(StateInfo) [▶ 376]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, ReadOnlyMemory.Byte) [▶ 377]	Changes the ADS status and the device status of an ADS server.
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 379]	Changes the ADS status and device status of the ADS server asynchronously.
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.Byte, CancellationToken) [▶ 380]	Writes the state asynchronously
	WriteSymbolAsync [▶ 381]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue(ISymbol, Object) [▶ 383]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 382]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

	Name	Description
	WriteValue.T. (ISymbol, T) [▶ 384]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 382]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationTokentoken) [▶ 386]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (ISymbol, T, CancellationTokentoken) [▶ 387]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (String, T, CancellationTokentoken) [▶ 385]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same layout as the ADS symbol.

Events

	Name	Description
	AdsNotification [▶ 390]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 391]	Occurs when a exception has occurred during notification management.
	AdsNotificationEx [▶ 391]	Occurs when the ADS devices sends a notification to the client.
	AdsNotificationsInv alidated [▶ 396]	Occurs when Notification Unregistrations / Invalidates are received from the AdsServer
	AdsStateChanged [▶ 392]	Occurs when the ADS state changes.
	AdsSumNotification [▶ 393]	Occurs when Notifications are send (bundled notifications)
	AdsSymbolVersionC hanged [▶ 394]	Occurs when the symbol version has been changed changes.
	ConnectionStateCha nged [▶ 395]	Occurs when the connection state has been changed.
	RouterStateChange d [▶ 395]	(Local) Router state changed event.

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2Async(TimeSpan, Cancellation.Token) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)

	Name	Description
 	PollAdsStateAsync(TimeSpan, CancellationToken) [► 1260]	Overloaded. Gets an observable sequence of AdsState [► 729]s via Polling. (Defined by AdsClientExtensions [► 1249].)
	PollDeviceState(IObservable.Unit.) [► 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [► 1157]s via Polling. (Defined by AdsClientExtensions [► 1249].)
 	PollDeviceState(TimeSpan) [► 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [► 1157]s via Polling. (Defined by AdsClientExtensions [► 1249].)
 	PollDeviceStateAsync(IObservable.Unit, CancellationToken) [► 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [► 1157]s via Polling. (Defined by AdsClientExtensions [► 1249].)
 	PollDeviceStateAsync(TimeSpan, CancellationToken) [► 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [► 1157]s via Polling. (Defined by AdsClientExtensions [► 1249].)
	PollSystemServiceState [► 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [► 3281].)
	PollSystemServiceStateAsync [► 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [► 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [► 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [► 1281].)
	PollValues(ISymbol, Type, TimeSpan) [► 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [► 1281].)
	PollValues(String, Type, IObservable.Unit.) [► 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [► 1281].)
	PollValues(String, Type, TimeSpan) [► 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [► 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [► 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [► 1281].)
	PollValues(ISymbol, Type, IObservable.Unit., Func.Exception, Object.) [► 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [► 1281].)

	Name	Description
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , IObservable.Unit , Func.Exception , T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , TimeSpan , Func.Exception , T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (ISymbol , .Int32 , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String , IObservable.Unit , Func.Exception , T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String , TimeSpan , Func.Exception , T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit .) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (String , .Int32 , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , IObservable.Unit , Func.Exception , T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (ISymbol , .Int32 , TimeSpan , Func.Exception , T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit , Func.Exception , T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
 	PollValues.T. (String, .Int32., TimeSpan, Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol, .Int32., IObservable.Unit.) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String, .Int32., IObservable.Unit.) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAs ync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(U Int32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(U Int32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RepeatedRead(UInt32, UInt32, Memory.Byte, Int32, TimeSpan) [► 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [► 1215] .)
	RepeatedRead(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, Func.ResultRead, Boolean.) [► 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [► 1215] .)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, CancellationToken) [► 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [► 1215] .)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, Func.ResultRead, Boolean, CancellationToken) [► 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [► 1215] .)
	RestartTwinCATAsync [► 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [► 3281] .)
	SetAdsState [► 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [► 3292] .)
	SetAdsStateAsync [► 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [► 3292] .)
	WaitUntilRestarted [► 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [► 3281] .)
	WaitUntilRestartedAsync [► 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [► 3281] .)
 	WhenAdsStateChanges [► 1261]	Gets an observable sequence of AdsState [► 729] s. (Defined by AdsClientExtensions [► 1249] .)
	WhenNotification(ISymbol) [► 1263]	Overloaded. Gets an observable sequence of Notification [► 1100] s. (Defined by AdsClientExtensions [► 1249] .)
 	WhenNotification(ISymbolCollection) [► 1264]	Overloaded. Gets an observable sequence of Notification [► 1100] objects. (Defined by AdsClientExtensions [► 1249] .)

	Name	Description
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges. [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

Remarks

The class `AdsClient` enables synchronous/asynchronous access to data of an ADS Device.

Examples

The following sample shows how to instantiate and use the `AdsClient` class.

AdsClient Demo (async)

```
using System;
using System Buffers.Binary;
using System.Threading;
using System.Threading.Tasks;
using TwinCAT.Ads;
using TwinCAT.TypeSystem;
```

```

namespace Sample
{
    class ClientAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            AmsAddress address = ArgParser.Parse(args);
            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;

            using (AdsClient client = new AdsClient())
            {
                // Connect to Address
                client.Connect(address.NetId, address.Port); // Connect to Port (851, first PLC by default)

                // Read the identification and version number of the device
                ResultDeviceInfo resultDeviceInfo = await client.ReadDeviceInfoAsync(cancel);

                if (resultDeviceInfo.Succeeded)

```

Argument Parser

```

public static class ArgParser
{
    /// <summary>
    /// Parses the arguments.
    /// </summary>
    /// <param name="args">The arguments.</param>
    /// <returns>AmsAddress.</returns>
    public static AmsAddress Parse(string[] args)
    {
        AmsNetId netId = AmsNetId.Local;
        int port = 851;

        if (args != null)
        {
            if (args.Length > 0 && args[0] != null)
                netId = AmsNetId.Parse(args[0]);

            if (args.Length > 1 && args[1] != null)
                port = int.Parse(args[1]);
        }
        return new AmsAddress(netId, port);
    }
}

```

The following sample shows how to call (Remote Procedures / Methods) within the PLC directly from the AdsClient class.

RPC Call Example (async)

```

namespace Sample
{
    using System;
    using System.Diagnostics;
    using System.Threading;
    using TwinCAT.Ads;
    using TwinCAT.TypeSystem;

    class RpcCallAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            //Parse the AmsAddress from command-line arguments
            AmsAddress address = ArgParser.Parse(args);

            // Create the ADS Client
            using (AdsClient client = new AdsClient())
            {
                // Establish Connection
                client.Connect(address);

                // Call a Method that has the following signature (within MAIN Program)

                /* {attribute 'TcRpcEnable'}
                METHOD PUBLIC M_Add : INT
                VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
                END_VAR
                */

                ResultRpcMethod result1 = await client.InvokeRpcMethodAsync("MAIN", "M_Add", new object[] {
(short)1, (short)4 }, CancellationToken.None);
                short result = (short)result1.ReturnValue;

                // Call a Method that has no parameter and returns VOID
                await client.InvokeRpcMethodAsync("MAIN", "M_Method1", new object[] { },CancellationToken.No
ne);
            }
        }
    }
}

```

RPC Call Example (sync)

```

6.2.1.1 AdsClient Properties

The [AdsClient](#) [► 183] type exposes the following members.

Properties

	Name	Description
	Address [► 209]	Gets the target AmsAddress [► 752] of of the established ADS connection (Destination side).
	ClientAddress [► 209]	Get the client AmsAddress [► 752] (Source side).
	DefaultValueEncoding [► 209]	Gets the default value encoding.
	Id [► 210]	Gets the AdsClient [► 183] Identifier.
	IsConnected [► 210]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.
	IsDisposed [► 211]	Gets a value indicating whether this instance is disposed.
	IsLocal [► 211]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	Logger [► 213]	Gets the logger interface.
	Session [► 212]	Gets the session that initiated this IConnection [► 79]
	SymbolEncoding [► 212]	Gets the symbol encoding.
	Timeout [► 213]	Sets the timeout for the ads communication. Unit is in ms.

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.1.1 **AdsClient.Address** Property

Gets the target [AmsAddress](#) [▶ 752] of of the established ADS connection (Destination side).

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AmsAddress Address { get; }
```

Property Value

Type: [AmsAddress](#) [▶ 752]

The address.

Implements

[IAdsConnection.Address](#) [▶ 895]

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.1.2 **AdsClient.ClientAddress** Property

Get the client [AmsAddress](#) [▶ 752] (Source side).

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AmsAddress ClientAddress { get; }
```

Property Value

Type: [AmsAddress](#) [▶ 752]

The client address.

Implements

[IAdsConnection.ClientAddress](#) [▶ 895]

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.1.3 **AdsClient.DefaultValueEncoding** Property

Gets the default value encoding.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Encoding DefaultValueEncoding { get; }
```

Property Value

Type: [Encoding](#)

The default value encoding.

Implements

[IConnection.DefaultValueEncoding](#) [► 81]

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.1.4 AdsClient.Id Property

Gets the [AdsClient](#) [► 183] Identifier.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Id { get; }
```

Property Value

Type: [Int32](#)

The identifier.

Implements

[IConnection.Id](#) [► 81]

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.1.5 AdsClient.IsConnected Property

Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method `ReadState` to determine if the target port is available.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsConnected { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is connected; otherwise, false.

Implements

[IConnection.IsConnected](#) [[▶ 82](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.1.6 AdsClient.IsDisposed Property

Gets a value indicating whether this instance is disposed.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsDisposed { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is disposed; otherwise, false.

Implements

[IAdsDisposableConnection.IsDisposed](#) [[▶ 935](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.1.7 AdsClient.IsLocal Property

Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsLocal { get; }
```

Property ValueType: [Boolean](#)

true if this instance is local; otherwise, false.

Implements[IAdsConnection.IsLocal](#) [[▶ 896](#)]**Exceptions**

Exception	Condition
NotImplementedException

6.2.1.2 AdsClient Methods

The [AdsClient](#) [[▶ 183](#)] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 233]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 234]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 236]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 237]	Adds a device notification as an asynchronous operation.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 239]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationEx(String,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.

	Name	Description
	NotificationSettings , Object , Type , .Int32) [▶ 240]	
	AddDeviceNotificationEx (UInt32 , UInt32 , NotificationSettings , Object , Type) [▶ 241]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationEx (UInt32 , UInt32 , NotificationSettings , Object , Type , .Int32) [▶ 242]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.
	AddDeviceNotificationExAsync (String , NotificationSettings , Object , Type , .Int32 , CancellationToken) [▶ 243]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	AddDeviceNotificationExAsync (UInt32 , UInt32 , NotificationSettings , Object , Type , .Int32 , CancellationToken) [▶ 245]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.
	CleanupSymbolTable [▶ 246]	Clears the internal symbol cache.
	Close [▶ 247]	Closes this AdsClient [▶ 183]
	Connect (AmsAddress) [▶ 248]	Connects the target
	Connect (AmsPort) [▶ 249]	Connects to the local target ADS Device.
	Connect (Int32) [▶ 247]	Connects to the local target ADS Device.
	Connect (AmsNetId , Int32) [▶ 250]	Connects to the target ADS Device.
	Connect (AmsNetId , AmsPort) [▶ 250]	Connects to the target ADS Device.
	Connect (String , Int32) [▶ 249]	Connects to the target ADS Device.
	ConnectAndWaitAsync [▶ 251]	Connects to the target address and waits until the AdsClient [▶ 183] is disconnected asynchronously.

	Name	Description
	CreateVariableHandle [▶ 251]	Determines the Symbol handle by its instance path synchronously.
	CreateVariableHandleAsync [▶ 252]	Determines the Symbol handle by its instance path asynchronously.
	DeleteDeviceNotification [▶ 253]	Deletes a registered notification.
	DeleteDeviceNotificationAsync [▶ 254]	Deletes a registered notification asynchronously.
	DeleteVariableHandle [▶ 255]	Releases the specified symbol/variable handle synchronously.
	DeleteVariableHandleAsync [▶ 255]	Releases the specified symbol/variable handle asynchronously.
	Disconnect [▶ 256]	Disconnects this AdsClient [▶ 183] from the local ADS router.
	Dispose [▶ 257]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 257]	Finalizes an instance of the AdsClient [▶ 183] class. (Overrides Object.Finalize .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object, CancellationTokens) [▶ 269]	invoke RPC method as an asynchronous operation.
 	InvokeRpcMethodAsync(String, String, .Object, CancellationTokens) [▶ 264]	Invokes the specified RPC Method asynchronously
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationTokens) [▶ 268]	invoke RPC method as an asynchronous operation.

	Name	Description
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 266]	Invokes the specified RPC Method asynchronously
	Read(UInt32, Memory.Byte.) [▶ 271]	Reads data synchronously from an ADS device and writes to the specified readBuffer.
	Read(UInt32, UInt32, Memory.Byte.) [▶ 272]	Reads data synchronously from an ADS device and writes it to the given readBuffer
	ReadAny(UInt32, Type) [▶ 275]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, Type, Int32.) [▶ 276]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type) [▶ 278]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, Int32.) [▶ 279]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32) [▶ 273]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, Int32.) [▶ 274]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32) [▶ 275]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32, Int32.) [▶ 277]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 283]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync(UInt32, Type, Int32., CancellationToken) [▶ 285]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 287]	Reads the value of an Anytype (Primitive type) asynchronously.

	Name	Description
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 287]	Reads the value of an Anytype (Primitive type) asynchronously.
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 281]	Reads data synchronously from an ADS device.
	ReadAnyAsync.T.(UInt32, .Int32., CancellationToken) [▶ 282]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T.(UInt32, UInt32, CancellationToken) [▶ 284]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T.(UInt32, UInt32, .Int32., CancellationToken) [▶ 285]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyString(UInt32, Int32, Encoding) [▶ 289]	Reads a string from the specified symbol/variable.
	ReadAnyString(UInt32, UInt32, Int32, Encoding) [▶ 289]	Reads as string from a specified address.
	ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [▶ 291]	Reads a string asynchronously from the specified symbol/variable
	ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 292]	Reads a string from a specified address asynchronously.
	ReadAsync(UInt32, Memory.Byte, CancellationToken) [▶ 294]	Reads the value data of the symbol asynchronously into the readBuffer.

	Name	Description
	ReadAsync(UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 295]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadDataType [▶ 296]	Call this method to obtain information about the specified data type.
	ReadDataTypeAsync [▶ 297]	read data type as an asynchronous operation.
	ReadDeviceInfo [▶ 298]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsync [▶ 298]	Reads the identification and version number of an ADS server.
	ReadState [▶ 299]	Reads the ADS status and the device status from an ADS server.
	ReadStateAsync [▶ 299]	Reads the ADS status and the device status from an ADS server.
	ReadSymbol [▶ 300]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadSymbolAsync [▶ 301]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadValue(ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue(String, Type) [▶ 304]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
	ReadValue.T.(ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) [▶ 302]	Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.
	ReadValueAsync(ISymbol, CancellationToken) [▶ 306]	Reads the value of a symbol asynchronously and returns it as an object. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValueAsync(String, Type, CancellationToken) [▶ 308]	Reads the value of a symbol asynchronously.
	ReadValueAsync.T.Value.(ISymbol, CancellationToken) [▶ 307]	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync.T.Value.(String, CancellationToken) [▶ 306]	Reads the value of a symbol asynchronously.

	Name	Description
	ReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte.) [▶ 310]	Writes data synchronously to an ADS device and then Reads data from that target.
	ReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte.) [▶ 311]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer
	ReadWriteAsync(UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken) [▶ 314]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	ReadWriteAsync(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken) [▶ 315]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	RegisterAdsStateChangedAsync [▶ 316]	Registers for AdsStateChanged [▶ 392] events as an asynchronous operation.
	RegisterSymbolVersionChanged [▶ 387]	Registers for an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	RegisterSymbolVersionChangedAsync [▶ 317]	Registers for an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	ToString	Returns a string that represents the current object. (Inherited from Object .)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 318]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 319]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.
	TryAddDeviceNotificationEx(String,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 391] event.

	Name	Description
	NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 321]	
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 322]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	TryCreateVariableHandle [▶ 323]	Determines the Symbol handle by its instance path synchronously.
	TryDeleteDeviceNotification(UInt32) [▶ 325]	Deletes a registered notification.
	TryDeleteDeviceNotification(UInt32, Int32) [▶ 325]	Deletes a registered notification.
	TryDeleteVariableHandle [▶ 326]	Releases the specified symbol/variable handle synchronously.
 	TryInvokeRpcMethod(String, String, .Object., Object.) [▶ 328]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, .Object., Object., Object.) [▶ 330]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object., Object.) [▶ 333]	Tries the invoke RPC method.
 	TryInvokeRpcMethod(String, String, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object., Object.) [▶ 331]	Invokes the RPC Method

	Name	Description
	TryRead(UInt32, Memory.Byte., Int32.) [▶ 337]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryRead(UInt32, UInt32, Memory.Byte., Int32.) [▶ 338]	Reads value data from the specified IndexGroup/IndexOffset to the specified memory location.
	TryReadDataType [▶ 338]	Call this method to obtain information about the specified data type.
	TryReadState [▶ 339]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadSymbol [▶ 340]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	TryReadValue(ISymbol, Object.) [▶ 342]	Reads the value of a symbol and returns it as an object.
	TryReadValue(String, Type, Object.) [▶ 344]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T. (ISymbol, T.) [▶ 343]	Reads the value of a symbol and returns it as an object.
	TryReadValue.T. (String, T.) [▶ 341]	Reads the value of a symbol and returns the value as object.
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 346]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 347]	Writes data synchronously to an ADS device and reads data from that device.
	TryResurrect [▶ 348]	Resurrects the connection
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 350]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 351]	Writes data synchronously to an ADS device.
	TryWriteControl(StationInfo) [▶ 352]	Changes the ADS status and the device status of an ADS server.

	Name	Description
	TryWriteControl(Sta telInfo, ReadOnlyMemory.B yte.) [▶ 353]	Changes the ADS status and the device status of an ADS server.
	TryWriteValue(ISym bol, Object) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(Strin g, Object) [▶ 354]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T. (ISymbol, T) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T. (String, T) [▶ 355]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same layout as the ADS symbol.
	UnregisterAdsState ChangedAsync [▶ 357]	unregister ads state changed as an asynchronous operation.
	UnregisterSymbolV ersionChanged [▶ 388]	Unregisters the symbol version changed.
	UnregisterSymbolV ersionChangedAsyn c [▶ 358]	Unregisters from an AdsSymbolVersionChanged [▶ 394] event as an asynchronous operation.
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 361]	Writes data synchronously to an ADS device.
	Write(UInt32, UInt32) [▶ 360]	Triggers a 'Write' call to the ADS device at the specified address.
	Write(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 361]	Writes data synchronously to an ADS device.
	WriteAny(UInt32, Object) [▶ 362]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, Object, .Int32.) [▶ 363]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAny(UInt32, UInt32, Object) [▶ 364]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 364]	Writes an object synchronously to an ADS device.

	Name	Description
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 366]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, Object, .Int32, CancellationToken) [▶ 367]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 368]	Write the value of an Anytype (Primitive type) asynchronously.
	WriteAnyAsync(UInt32, UInt32, Object, .Int32, CancellationToken) [▶ 369]	Write the value of an Anytype (Primitive type) asynchronously.
	WriteAnyStringAsync(String, String, Int32, Encoding, CancellationToken) [▶ 370]	Writes the string (Potentially unsafe!)
	WriteAnyStringAsync(UInt32, String, Int32, Encoding, CancellationToken) [▶ 371]	Writes the string (Potentially unsafe!)
	WriteAsync(UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 375]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.
	WriteAsync(UInt32, UInt32, CancellationToken) [▶ 373]	Triggers a write call at the specified IndexGroup/IndexOffset asynchronously.
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 375]	Writes the data / Value asynchronously into the specified writeBuffer.
	WriteControl(StateInfo) [▶ 376]	Changes the ADS status and the device status of an ADS server.

	Name	Description
	WriteControl(StateInfo, ReadOnlyMemory<Byte>) [▶ 377]	Changes the ADS status and the device status of an ADS server.
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 379]	Changes the ADS status and device status of the ADS server asynchronously.
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory<Byte>, CancellationToken) [▶ 380]	Writes the state asynchronously
	WriteSymbolAsync [▶ 381]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue(ISymbol, Object) [▶ 383]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 382]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue.T.(ISymbol, T) [▶ 384]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 382]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 386]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 387]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 385]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Extension Methods

	Name	Description
	PollAdsState(IObservable<Unit>) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)

	Name	Description
	PollAdsState(IObservable.Unit.) [▸ 1256]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsState(TimeSpan) [▸ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
	PollAdsState(TimeSpan) [▸ 1257]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsState2(IObservable.Unit.) [▸ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsState2(TimeSpan) [▸ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▸ 1274]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsState2Async(TimeSpan, Cancellation.Token) [▸ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 3296]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 1259]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 3298]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 1260]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
	PollDeviceState(IObservable.Unit.) [▸ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▸ 1157]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)

	Name	Description
	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollDeviceStateAsync(IObservable.Unit, Cancellation.Token) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollDeviceStateAsync(TimeSpan, Cancellation.Token) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281] .)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281] .)
	PollValues(ISymbol, Type, IObservable.Unit) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, .Int32., TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)

	Name	Description
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit, Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	<code>PollValues.T.</code> (<code>ISymbol</code> , <code>TimeSpan</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.</code> (<code>ISymbol</code> , <code>.Int32</code> , <code>IObservable.Unit</code>) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.</code> (<code>ISymbol</code> , <code>.Int32</code> , <code>TimeSpan</code>) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String</code> , <code>IObservable.Unit</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String</code> , <code>TimeSpan</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.</code> (<code>String</code> , <code>.Int32</code> , <code>IObservable.Unit</code>) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.</code> (<code>String</code> , <code>.Int32</code> , <code>TimeSpan</code>) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.</code> (<code>ISymbol</code> , <code>.Int32</code> , <code>IObservable.Unit</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.</code> (<code>ISymbol</code> , <code>.Int32</code> , <code>TimeSpan</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.</code> (<code>String</code> , <code>.Int32</code> , <code>IObservable.Unit</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.</code> (<code>String</code> , <code>.Int32</code> , <code>TimeSpan</code> , <code>Func.Exception</code> , <code>T</code>) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAs ync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(U Int32, UInt32, Memory.Byte, UInt32, Boolean) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(U Int32, UInt32, UInt32, Memory.Byte, Func.ResultRead, Boolean, Boolean) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte, Func.ResultRead, Boolean, CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt 32, UInt32, Memory.Byte, Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt 32, UInt32, Memory.Byte, Int32,	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	TimeSpan , Func.ResultRead , Boolean) [▶ 1225]	
	RepeatedReadAsync (UInt32 , UInt32 , Memory.Byte , Int32 , TimeSpan , CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync (UInt32 , UInt32 , Memory.Byte , Int32 , TimeSpan , Func.ResultRead , Boolean , CancellationToken) [▶ 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RestartTwinCATAsync [▶ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	SetAdsState [▶ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	SetAdsStateAsync [▶ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	WaitUntilRestarted [▶ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▶ 3281].)
	WaitUntilRestartedAsync [▶ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
 	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol) [▶ 1263]	Overloaded. Gets an observable sequence of Notification [▶ 1100]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(ISymbolCollection) [▶ 1264]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges. [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.1.2.1 AdsClient.AddDeviceNotification Method

Overload List

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 233]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotification(UInt32, UInt32,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

	Name	Description
	Int32, NotificationSettings, Object) [▶ 234]	

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.1.1 AdsClient.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [[▶ 390](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

symbolPath	Type: System.String Symbol / Instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)
The notification handle.

Implements

[IAdsNotifications.AddDeviceNotification\(String, Int32, NotificationSettings, Object\)](#) [[▶ 971](#)]

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 390](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 253](#)] should always called when the notification is not used anymore.

6.2.1.2.1.2 AdsClient.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)

The notification handle.

Implements

[IAdsNotifications.AddDeviceNotification\(UInt32, UInt32, Int32, NotificationSettings, Object\)](#) [[▶ 972](#)]

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 390](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 253](#)] should always called when the notification is not used anymore.

6.2.1.2.2 AdsClient.AddDeviceNotificationAsync Method

Overload List

	Name	Description
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationTok en) [▶ 236]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 390] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationTok en) [▶ 237]	Adds a device notification as an asynchronous operation.

Reference

- [AdsClient Class](#) [[▶ 183](#)]
- [TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.2.1 **AdsClient.AddDeviceNotificationAsync Method (String, Int32, NotificationSettings, Object, CancellationToken)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotification \[▸ 390\]](#) event.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationAsync (
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▸ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle \[▸ 1136\]](#).

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle \[▸ 1136\]](#) type parameter contains the created handle ([Handle \[▸ 1138\]](#)) and the [ErrorCode \[▸ 1120\]](#) after execution.

Implements

[IAdsNotifications.AddDeviceNotificationAsync\(String, Int32, NotificationSettings, Object, CancellationToken\) \[▸ 974\]](#)

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification \[▸ 390\]](#) as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\) \[▸ 254\]](#) should always be called when the notification is not used anymore.

6.2.1.2.2 AdsClient.AddDeviceNotificationAsync Method (UInt32, UInt32, Int32, NotificationSettings, Object, CancellationTokens)

Adds a device notification as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationAsync (
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    CancellationTokens cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
cancel	Type: System.Threading.CancellationTokens The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [► 1136].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [► 1136] type parameter contains the created handle (Handle) and the [ErrorCode](#) [► 1120] after execution.

Implements

[IAdsNotifications.AddDeviceNotificationAsync\(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationTokens\)](#) [► 975]

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [► 390] as value. 6.2.1.2.4.1 AdsClient.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, .Int32., CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx \[▸ 391\]](#) event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationExAsync(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [[▶ 1136](#)] type parameter contains the created handle ([Handle](#) [[▶ 1138](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsNotifications.AddDeviceNotificationExAsync\(String, NotificationSettings, Object, Type, .Int32., CancellationToken\)](#) [[▶ 981](#)]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 254](#)] should always be called when the notification is not used anymore.

6.2.1.2.4.2 **AdsClient.AddDeviceNotificationExAsync Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx \[► 391\]](#) event.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationExAsync (
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type anyType,
    int[]? args,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data.
anyType	Type: System.Type Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.
args	Type: .System.Int32. Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle \[► 1136\]](#).

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle \[► 1136\]](#) type parameter contains the created handle ([Handle \[► 1138\]](#)) and the [ErrorCode \[► 1120\]](#) after execution.

Implements

[IAdsNotifications.AddDeviceNotificationExAsync\(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken\) \[► 982\]](#)

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [▶ 254] should always called when the notification is not used anymore.

6.2.1.2.5 AdsClient.CleanupSymbolTable Method

Clears the internal symbol cache.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public void CleanupSymbolTable()
```

Implements

[IAdsSymbolicAccess.CleanupSymbolTable.](#) [▶ 1070]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which which needs an extra ADS round trip.

Overload List

	Name	Description
	Connect(AmsAddress) [▶ 248]	Connects the target
	Connect(AmsPort) [▶ 249]	Connects to the local target ADS Device.
	Connect(Int32) [▶ 247]	Connects to the local target ADS Device.
	Connect(AmsNetId, Int32) [▶ 250]	Connects to the target ADS Device.
	Connect(AmsNetId, AmsPort) [▶ 250]	Connects to the target ADS Device.
	Connect(String, Int32) [▶ 249]	Connects to the target ADS Device.

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.2.7.1 **AdsClient.Connect Method (Int32)**

Connects to the local target ADS Device.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    int port
)
```

Parameters

port	Type: System.Int32 The port number of the local ADS target device to connect to.
------	---

Implements

[IAdsConnectAddress.Connect\(Int32\)](#) [[▶ 873](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload](#) [[▶ 247](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.7.2 AdsClient.Connect Method (AmsAddress)

Connects the target

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    AmsAddress address
)
```

Parameters

address	Type: TwinCAT.Ads.AmsAddress [▶ 752] The address.
---------	--

Implements

[IAdsConnectAddress.Connect\(AmsAddress\)](#) [[▶ 873](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload](#) [[▶ 247](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.7.3 AdsClient.Connect Method (AmsPort)

Connects to the local target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    AmsPort port
)
```

Parameters

port	Type: TwinCAT.Ads.AmsPort [▶ 795] The port number of the local ADS target device to connect to.
------	--

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload](#) [[▶ 247](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.7.4 AdsClient.Connect Method (String, Int32)

Connects to the target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    string netId,
    int port
)
```

Parameters

netId	Type: System.String The AmsNetId [▶ 767] of the ADS target device specified as string.
port	Type: System.Int32 The port number of the ADS target device.

Implements

[IAdsConnectAddress.Connect\(String, Int32\)](#) [[▶ 874](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload](#) [[▶ 247](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.7.5 AdsClient.Connect Method (AmsNetId, Int32)

Connects to the target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    AmsNetId netId,
    int port
)
```

Parameters

netId	Type: TwinCAT.Ads.AmsNetId [▶ 767] The AmsNetId of the target device.
port	Type: System.Int32 The Ams Port number on the target device to connect to.

Implements

[IAdsConnectAddress.Connect\(AmsNetId, Int32\)](#) [[▶ 874](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload](#) [[▶ 247](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.7.6 AdsClient.Connect Method (AmsNetId, AmsPort)

Connects to the target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Connect(
    AmsNetId netId,
    AmsPort port
)
```

Parameters

netId	Type: TwinCAT.Ads.AmsNetId [▶ 767] The AmsNetId [▶ 767] of the ADS target device specified as string.
port	Type: TwinCAT.Ads.AmsPort [▶ 795] The port number of the ADS target device.

Reference

[AdsClient Class](#) [[▶ 183](#)]

[Connect Overload \[▶ 247\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.1.2.8 AdsClient.ConnectAndWaitAsync Method

Connects to the target address and waits until the [AdsClient \[▶ 183\]](#) is disconnected asynchronously.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task ConnectAndWaitAsync(  
    AmsAddress address,  
    CancellationToken cancel  
)
```

Parameters

address	Type: TwinCAT.Ads.AmsAddress [▶ 752] The target address.
cancel	Type: System.Threading.CancellationToken Cancellation Token.

Return Value

Type: [Task](#)

Returns a task object that represents the `ConnectAndWaitAsync(AmsAddress, CancellationToken)` operation as result.

Remarks

This method is used for scenarios, where the [AdsClient \[▶ 183\]](#) disconnects from other code asynchronously. When this method returns, the connection is already terminated and only additional cleanup code should be processed.

Reference

[AdsClient Class \[▶ 183\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.1.2.9 AdsClient.CreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint CreateVariableHandle(  
    string symbolPath  
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
------------	---

Return Value

Type: [UInt32](#)
The symbols/variable handle

Implements

[IAdsHandle.CreateVariableHandle\(String\)](#) [[▶ 956](#)]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [CreateVariableHandle\(String\)](#) is the [DeleteVariableHandle\(UInt32\)](#) [[▶ 255](#)]

Reference

[AdsClient.TryCreateVariableHandle\(String, UInt32.\)](#) [[▶ 323](#)]

6.2.1.2.10 AdsClient.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public Task<ResultHandle> CreateVariableHandleAsync (
    string symbolPath,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'CreateVariableHandle' operation. The [ResultHandle](#) [[▶ 1136](#)] parameter contains the variable handle ([Handle](#) [[▶ 1138](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsHandle.CreateVariableHandleAsync\(String, CancellationToken\) \[► 956\]](#)

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [CreateVariableHandleAsync\(String, CancellationToken\)](#) is the [DeleteVariableHandleAsync\(UInt32, CancellationToken\) \[► 255\]](#)

Reference

[AdsClient.CreateVariableHandle\(String\) \[► 251\]](#)

6.2.1.2.11 AdsClient.DeleteDeviceNotification Method

Deletes a registered notification.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void DeleteDeviceNotification(  
    uint notificationHandle  
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
--------------------	---

Implements

[IAdsNotifications.DeleteDeviceNotification\(UInt32\) \[► 983\]](#)

Remarks

This is the complementary method to [AddDeviceNotification Overload \[► 971\]](#) overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

[AddDeviceNotificationAsync Overload \[► 973\]](#)

6.2.1.2.12 AdsClient.DeleteDeviceNotificationAsync Method

Deletes a registered notification asynchronously.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> DeleteDeviceNotificationAsync (
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds \[► 1116\]](#).

A task that represents the asynchronous 'DeleteDeviceNotification' operation. The [ErrorCode \[► 1120\]](#) property contains the ADS error code after execution.

Implements

[IAdsNotifications.DeleteDeviceNotificationAsync\(UInt32, CancellationToken\) \[► 984\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Remarks

This is the complementary method to [AddDeviceNotificationAsync Overload \[► 973\]](#) overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

[AddDeviceNotification Overload \[▶ 971\]](#)

6.2.1.2.13 **AdsClient.DeleteVariableHandle Method**

Releases the specified symbol/variable handle synchronously.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void DeleteVariableHandle(  
    uint variableHandle  
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
----------------	---

Return Value

Type:
The ADS error code.

Implements

[IAdsHandle.DeleteVariableHandle\(UInt32\) \[▶ 957\]](#)

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [TryDeleteVariableHandle\(UInt32\) \[▶ 326\]](#) is the [TryCreateVariableHandle\(String, UInt32.\) \[▶ 323\]](#)

Reference

[AdsClient Class \[▶ 183\]](#)

[AdsClient.DeleteVariableHandleAsync\(UInt32, CancellationToken\) \[▶ 255\]](#)

6.2.1.2.14 **AdsClient.DeleteVariableHandleAsync Method**

Releases the specified symbol/variable handle asynchronously.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> DeleteVariableHandleAsync(
    uint variableHandle,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [► 1116].

A task that represents the asynchronous 'DeleteVariableHandle' operation. The [ResultAds](#) [► 1116] parameter contains the [ErrorCode](#) [► 1120] after execution.

Implements

[IAdsHandle.DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) [► 958]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) is the [CreateVariableHandleAsync\(String, CancellationToken\)](#) [► 252]

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

[AdsClient.DeleteVariableHandle\(UInt32\)](#) [► 255]

6.2.1.2.15 AdsClient.Disconnect Method

Disconnects this [AdsClient](#) [► 183] from the local ADS router.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Disconnect()
```

Return Value

Type: [Boolean](#)

true if disconnected, false otherwise.

Implements

[IConnection.Disconnect.](#) [[▶ 84](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.16 **AdsClient.Dispose Method**

Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Dispose()
```

Implements

[IDisposable.Dispose.](#)

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.17 **AdsClient.Finalize Method**

Finalizes an instance of the [AdsClient](#) [[▶ 183](#)] class.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected override void Finalize()
```

Implements

[Object.Finalize.](#)

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.18 AdsClient.InvokeRpcMethod Method

Overload List

	Name	Description
 	InvokeRpcMethod(String, .Object.) [▶ 258]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, .Object., .Object.) [▶ 260]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object.) [▶ 261]	Invokes the specified RPC Method

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.18.1 AdsClient.InvokeRpcMethod Method (String, String, .Object.)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The input parameters or NULL

Return Value

Type: [Object](#)

The return value of the Method (as object).

Implements

[IAdsRpcInvoke.InvokeRpcMethod\(String, String, Object.\)](#) [[▶ 1015](#)]

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] { (short) 3, (short) 4 });

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

Reference

[AdsClient Class](#) [[▶ 183](#)]

[InvokeRpcMethod Overload](#) [[▶ 258](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.18.2 **AdsClient.InvokeRpcMethod Method (String, String, .Object., .Object.)**

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The input parameters or NULL
outParameters	Type: .System.Object . The output parameters.

Return Value

Type: [Object](#)

The return value of the Method (as object).

Implements

[IAdsRpcInvoke.InvokeRpcMethod\(String, String, .Object., .Object.\)](#) [[▶ 1017](#)]

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [[▶ 2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
```

```

/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>

    using (AdsClient client = new AdsClient())
    {
        //client.Synchronize = false;

        // Connect to the target device
        client.Connect(address);

        SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
        ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

        // Get the Symbols (Dynamic Symbols)

        IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

        // Call a Method that has the following signature (within MAIN Program)
        /* {attribute 'TcRpcEnable'}
        METHOD PUBLIC M_Add : INT
        VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
        END_VAR
        */

        short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

        // Call a Method that has no parameter and returns VOID
        main.InvokeRpcMethod("M_Method1", new object[] {});

        //Browsing RpcMethods
        foreach(IRpcMethod method in main.RpcMethods)
        {
            string methodName = method.Name;

            foreach(IRpcMethodParameter parameter in method.Parameters)
            {
                string parameterName = parameter.Name;
                string parameterType = parameter.TypeName;
            }
        }
    }
}

```

Reference

[AdsClient Class \[► 183\]](#)

[InvokeRpcMethod Overload \[► 258\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.18.3 AdsClient.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The ret specifier (specifying the return value) or NULL.
outParameters	Type: .System.Object .. The out parameters.

Return Value

Type: [Object](#)
The return value of the Method (as object).

Implements

[IAdsRpcInvoke.InvokeRpcMethod\(String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..\)](#)
[▶ 1018](#)

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
        }
    }
}

[InvokeRpcMethod Overload \[▶ 258\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.1.2.19 AdsClient.InvokeRpcMethodAsync Method

Overload List

	Name	Description
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object t, Cancellation token) [▶ 269]	invoke RPC method as an asynchronous operation.
	InvokeRpcMethodAsync(String, String, .Object, Cancellation token) [▶ 264]	Invokes the specified RPC Method asynchronously

	Name	Description
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationToken) [▶ 268]	invoke RPC method as an asynchronous operation.
 	InvokeRpcMethodAsync(String, String, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationToken) [▶ 266]	Invokes the specified RPC Method asynchronously

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.2.19.1 AdsClient.InvokeRpcMethodAsync Method (String, String, .Object, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultRpcMethod> InvokeRpcMethodAsync (
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/Instance path of the symbol.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
cancel	Type: System.Threading.CancellationTok The cancellation token

Return Value

Type: [Task.ResultRpcMethod](#) [▸ 1176].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [▸ 1176] results contains the return value together with the output parameters.

Implements

[IAdsRpcInvoke.InvokeRpcMethodAsync\(String, String, .Object., CancellationToken\)](#) [▸ 1021]

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [▸ 2094] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

```

    }
}

```

Reference

[InvokeRpcMethodAsync Overload \[► 263\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.19.2 AdsClient.InvokeRpcMethodAsync Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public Task<ResultRpcMethod> InvokeRpcMethodAsync (
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    CancellationToken cancel
)

```

Parameters

symbolPath	Type: System.String The symbol/Instance path of the symbol.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] . The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] The ret specifier (specifying the return value) or NULL.
cancel	Type: System.Threading.CancellationToken The cancellation token

Return Value

Type: [Task.ResultRpcMethod \[► 1176\]](#).

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod \[► 1176\]](#) results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. [ReturnValue \[► 1179\]](#) and the [ErrorCode \[► 1120\]](#) of the ADS communication after execution.

Implements

[IAdsRpcInvoke.InvokeRpcMethodAsync\(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken\)](#) [[▶ 1022](#)]

Examples

6.2.1.2.21.7 AdsClient.ReadAny Method (UInt32, UInt32, Type)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type
)
```

Parameters

indexGroup	Type: System.UInt32 Index group of the ADS variable.
indexOffset	Type: System.UInt32 Index offset of the ADS variable.
type	Type: System.Type Type of the object to be read.

Return Value

Type: [Object](#)
The read value.

Implements

[IAdsAnyAccess.ReadAny\(UInt32, UInt32, Type\) \[► 815\]](#)

Reference

[AdsClient Class \[► 183\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.21.8 AdsClient.ReadAny Method (UInt32, UInt32, Type, .Int32.)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[]? args
)
```

Parameters

indexGroup	Type: System.UInt32 Index group of the ADS variable.
indexOffset	Type: System.UInt32 Index offset of the ADS variable.
type	Type: System.Type Type of the object to be read.
args	Type: .System.Int32 . Additional arguments.

Return Value

Type: [Object](#)
The read value.

Implements

[IAdsAnyAccess.ReadAny\(UInt32, UInt32, Type, .Int32.\) \[► 815\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Type of value Parameter	Necessary Arguments (args)
string	args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [▶ 2927].

6.2.1.2.25.4 AdsClient.ReadAsync Method (UInt32, UInt32, Memory.Byte., CancellationToken)

Reads the data asynchronously from specified IndexGroup/IndexOffset

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultRead> ReadAsync(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
readBuffer	Type: System.Memory.Byte . The read buffer, memory area where the data is written.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultRead](#) [► 1143].

A task that represents the asynchronous read operation. The [ResultRead](#) [► 1143] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [► 1145]) and the [ErrorCode](#) [► 1120] after execution..

Implements

[IAdsReadWrite.ReadAsync\(UInt32, UInt32, Memory.Byte., CancellationToken\)](#) [► 996]

Reference

[AdsClient Class](#) [► 183]

[ReadAsync Overload](#) [► 293]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.2.26 AdsClient.ReadDataType Method

Call this method to obtain information about the specified data type.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public IDataType ReadDataType(  
    string typeName  
)
```

Parameters

typeName	Type: System.String Name of the data type (without namespace)
----------	--

Return Value

Type: [IDataType](#) [► 2475]

An containing the requested type.

Implements

[IAdsSymbolicAccess.ReadDataType\(String\)](#) [► 1070]

Exceptions

Exception	Condition
ArgumentOutOfRangeException	typeName
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Reference

6.2.1.2.27 AdsClient.ReadDataTypeAsync Method

read data type as an asynchronous operation.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultValue<IDatatype>> ReadDataTypeAsync (
    string typeName,
    CancellationToken cancel
)
```

Parameters

typeName	Type: System.String Name of the data type.
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultValue \[► 1181\].IDatatype \[► 2475\]](#)..

A task that represents the asynchronous 'ReadDataType' operation. The [ResultValue.TValue. \[► 1181\]](#) parameter contains the read value ([Value \[► 1185\]](#)) and the [ErrorCode \[► 1120\]](#) after execution.

Implements

[IAdsSymbolicAccess.ReadDataTypeAsync\(String, CancellationToken\) \[► 1070\]](#)

Exceptions

Exception	Condition
ArgumentOutOfRangeException	typeName
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Reference

6.2.1.2.28 **AdsClient.ReadDeviceInfo Method**

Reads the identification and version number of an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DeviceInfo ReadDeviceInfo()
```

Return Value

Type: [DeviceInfo](#) [► 801]

DeviceInfo struct containing the name of the device and the version information.

Implements

[IAdsConnection.ReadDeviceInfo.](#) [► 914]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.2.29 **AdsClient.ReadDeviceInfoAsync Method**

Reads the identification and version number of an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultDeviceInfo> ReadDeviceInfoAsync(
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken The cancellation token.
--------	---

Return Value

Type: [Task.ResultDeviceInfo](#) [► 1132].

A task that represents the asynchronous 'ReadDeviceState' operation. The [ResultDeviceInfo](#) [► 1132] parameter contains the value [DeviceInfo](#) [► 1134] and the [ErrorCode](#) [► 1120] of the ADS communication after execution.

Implements

[IAdsConnection.ReadDeviceInfoAsync\(CancellationTokens\)](#) [► 914]

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.2.30 **AdsClient.ReadState Method**

Reads the ADS status and the device status from an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public StateInfo ReadState()
```

Return Value

Type: [StateInfo](#) [► 1200]

The ADS statue and device status.

Implements

[IAdsStateProvider.ReadState.](#) [► 1058]

Remarks

Not all ADS Servers support the State ADS Request.

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.2.31 **AdsClient.ReadStateAsync Method**

Reads the ADS status and the device status from an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultReadDeviceState> ReadStateAsync(
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken The cancellation token
--------	--

Return Value

Type: [Task.ResultReadDeviceState](#) [[▶ 1157](#)].

A task that represents the asynchronous 'ReadState' operation. The [ResultReadDeviceState](#) [[▶ 1157](#)] parameter contains the state ([State](#) [[▶ 1159](#)]) as long as the [ErrorCode](#) [[▶ 1120](#)] of the ADS communication after execution.

Implements

[IAdsStateProvider.ReadStateAsync\(CancellationToken\)](#) [[▶ 1058](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

Not all ADS Servers support the State ADS Request

Reference

6.2.1.2.32 AdsClient.ReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public IAdsSymbol ReadSymbol(
    string name
)
```

Parameters

name	Type: System.String Name of the symbol.
------	--

Return Value

Type: [IAdsSymbol](#) [[▶ 1755](#)]

A [IAdsSymbol2](#) containing the requested symbol information or null if symbol could not be found.

Implements

[IAdsSymbolicAccess.ReadSymbol\(String\)](#) [[▶ 1071](#)]

Exceptions

Exception	Condition
AdsErrorException [▶ 682]	Thrown when the ADS call fails.

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.33 AdsClient.ReadSymbolAsync Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultValue<IAdsSymbol>> ReadSymbolAsync (
    string name,
    CancellationToken cancel
)
```

Parameters

name	Type: System.String Name of the symbol.
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultValue](#) [[▶ 1181](#)].[IAdsSymbol](#) [[▶ 1755](#)].

A task that represents the asynchronous 'ReadSymbolInfo' operation. The [ResultValue.TValue](#). [[▶ 1181](#)] parameter contains the read value (Value) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsSymbolicAccess.ReadSymbolAsync\(String, CancellationToken\)](#) [[▶ 1072](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.34 AdsClient.ReadValue Method

Overload List

	Name	Description
	ReadValue(ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue.T. (ISymbol) [▶ 303]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) [▶ 302]	Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.
	ReadValue(String, Type) [▶ 304]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.

Reference

[AdsClient Class](#) [▶ 183]

Reads the value of a symbol asynchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultValue<TValue>> ReadValueAsync<TValue>(
    string name,
    CancellationToken cancel
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
cancel	Type: System.Threading.CancellationToken The cancel token.

Type Parameters

TValue	The value type.
--------	-----------------

Return Value

Type: [Task.ResultValue](#) [[▶ 1181](#)].TValue..

A task that represents the asynchronous read operation. The [ResultAnyValue](#) [[▶ 1129](#)] parameter contains the read value (Value) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Remarks

The parameter type must have the same layout as the ADS symbol.

6.2.1.2.37.2 AdsClient.ReadWriteAsync Method (UInt32, UInt32, Memory`1, Void, Byte)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public Task<ResultReadWrite> ReadWriteAsync(  
    uint indexGroup,  
    uint indexOffset,  
    Memory readBuffer,  
    void writeBuffer,  
    byte cancel  
)
```

Parameters

indexGroup	Type: System.UInt32
------------	-------------------------------------

indexOffset	Type: System.UInt32
readBuffer	Type: Memory
writeBuffer	Type: System.Void
cancel	Type: System.Byte

Return Value

Type: [Task.ResultReadWrite](#) [[▶ 1163](#)].

Reference

[AdsClient Class](#) [[▶ 183](#)]

[ReadWriteAsync Overload](#) [[▶ 312](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.37.3 **AdsClient.ReadWriteAsync Method (UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken)**

ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultReadWrite> ReadWriteAsync(
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Variable handle.
readBuffer	Type: System.Memory.Byte . The read data / value
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write data / value.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultReadWrite](#) [[▶ 1163](#)].

A task that represents the asynchronous 'ReadWrite' operation. The [ResultReadWrite](#) [[▶ 1163](#)] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [[▶ 1145](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsHandle.ReadWriteAsync\(UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken\) \[► 961\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Reference

[ReadWriteAsync Overload \[► 312\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.37.4 **AdsClient.ReadWriteAsync Method (UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken)**

Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultReadWrite> ReadWriteAsync (
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
readBuffer	Type: System.Memory.Byte. The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte. The write buffer.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultReadWrite \[► 1163\]](#).

A task that represents the asynchronous 'ReadWrite' operation. The [ResultReadWrite \[► 1163\]](#) parameter contains the total number of bytes read into the buffer (ReadBytes) and the [ErrorCode \[► 1120\]](#) after execution.

Implements

[IAdsReadWrite.ReadWriteAsync\(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken\)](#) [[▶ 997](#)]

Reference

[AdsClient Class](#) [[▶ 183](#)]

[ReadWriteAsync Overload](#) [[▶ 312](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.38 AdsClient.RegisterAdsStateChangedAsync Method

Registers for [AdsStateChanged](#) [[▶ 392](#)] events as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> RegisterAdsStateChangedAsync (
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsStateChangedEventArgs [▶ 729]. The handler function to be registered for AdsStateChanged calls.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [[▶ 1116](#)].

A task that represents the asynchronous 'RegisterAdsStateChanged' operation. The [ResultAds](#) [[▶ 1116](#)] parameter contains the state the [ErrorCode](#) [[▶ 1120](#)] of the ADS communication after execution.

Implements

[IAdsStateProvider.RegisterAdsStateChangedAsync\(EventHandler.AdsStateChangedEventArgs., CancellationToken\)](#) [[▶ 1059](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.39 **AdsClient.RegisterSymbolVersionChangedAsync Method**

Registers for an [AdsSymbolVersionChanged](#) [▶ 394] event as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> RegisterSymbolVersionChangedAsync (
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsSymbolVersionChangedEventArgs [▶ 739]. The handler function to register.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [▶ 1116].

A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The [ResultAds](#) [▶ 1116] parameter contains the value [ErrorCode](#) [▶ 1120] of the ADS communication after execution.

Implements

[IAdsSymbolChangedProvider.RegisterSymbolVersionChangedAsync\(EventHandler.AdsSymbolVersionChangedEventArgs, CancellationToken\)](#) [▶ 1062]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.2.40 **AdsClient.TryAddDeviceNotification Method**

Overload List

	Name	Description
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 318]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 390] event.

	Name	Description
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 319]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.40.1 **AdsClient.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)**

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [[▶ 390](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    out uint notificationHandle
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data.
notificationHandle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS ErrorCode.

Implements

[IAdsNotifications.TryAddDeviceNotification\(String, Int32, NotificationSettings, Object, UInt32.\)](#) [[▶ 985](#)]

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 390](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 325](#)] should always be called when the notification is not used anymore.

6.2.1.2.40.2 AdsClient.TryAddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [[▶ 991](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    out uint handle
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

handle	Type: System.UInt32 . The notification handle.
--------	---

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Implements

[IAdsNotifications.TryAddDeviceNotification\(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.\)](#) [[▶ 986](#)]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 390](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)] should always called when the notification is not used anymore.

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.41.1 AdsClient.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 391](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    out uint notificationHandle
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32. Additional arguments (for 'AnyType')
notificationHandle	Type: System.UInt32. The notification handle

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Implements

[IAdsNotifications.TryAddDeviceNotificationEx\(String, NotificationSettings, Object, Type, .Int32., UInt32.\)](#)
[\[► 988\]](#)

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [\[► 325\]](#) should always called when the notification is not used anymore.

Reference

6.2.1.2.41.2 **AdsClient.TryAddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)**

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [\[► 993\]](#) event.

Namespace: [TwinCAT.Ads](#) [\[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type anyType,
    int[]? args,
    out uint handle
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

anyType	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . The 'AnyType' arguments.
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS Error code.

Implements

[IAdsNotifications.TryAddDeviceNotificationEx\(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.\)](#) [[▶ 989](#)]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 983](#)] should always called when the notification is not used anymore.

6.2.1.2.42 AdsClient.TryCreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryCreateVariableHandle(
    string symbolPath,
    out uint variableHandle
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
variableHandle	Type: System.UInt32 . The symbols handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Implements

[IAdsHandle.TryCreateVariableHandle\(String, UInt32.\)](#) [[▶ 961](#)]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [TryCreateVariableHandle\(String, UInt32.\)](#) is the [TryDeleteVariableHandle\(UInt32\)](#) [[▶ 326](#)]

Reference

6.2.1.2.43 AdsClient.TryDeleteDeviceNotification Method

Overload List

	Name	Description
	TryDeleteDeviceNotification(UInt32) [▶ 325]	Deletes a registered notification.
	TryDeleteDeviceNotification(UInt32, Int32) [▶ 325]	Deletes a registered notification.

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.43.1 **AdsClient.TryDeleteDeviceNotification Method (UInt32)**

Deletes a registered notification.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryDeleteDeviceNotification(  
    uint notificationHandle  
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
--------------------	---

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS error code.

Implements

[IAdsNotifications.TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)]

Remarks

This is the complementary method to [TryAddDeviceNotification Overload](#) [[▶ 985](#)] overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

6.2.1.2.43.2 **AdsClient.TryDeleteDeviceNotification Method (UInt32, Int32)**

Deletes a registered notification.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryDeleteDeviceNotification(
    uint notificationHandle,
    int timeout
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
timeout	Type: System.Int32 The timeout.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

This is the complementary method to [TryAddDeviceNotification Overload](#) [[▶ 985](#)] overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

6.2.1.2.44 AdsClient.TryDeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryDeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
----------------	---

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Implements

[IAdsHandle.TryDeleteVariableHandle\(UInt32\)](#) [[▶ 962](#)]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryDeleteVariableHandle(UInt32) is the [TryCreateVariableHandle\(String, UInt32.\)](#) [[▶ 323](#)]

Reference

6.2.1.2.45 **AdsClient.TryInvokeRpcMethod Method**

Overload List

	Name	Description
	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 328]	Invokes the specified RPC Method
	TryInvokeRpcMethod(String, String, Object, Object., Object.) [▶ 330]	Invokes the specified RPC Method
	TryInvokeRpcMethod(IRpcCallableInstance,	Tries the invoke RPC method.

	Name	Description
	IRpcMethod , .Object , .AnyTypeSpecifier " AnyTypeSpecifier , .Object , .Object) [▶ 333]	
	TryInvokeRpcMethod (String , String , .Object , .AnyTypeSpecifier , AnyTypeSpecifier , .Object , .Object) [▶ 331]	Invokes the RPC Method

Reference

[AdsClient Class](#) [▶ 183]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.1.2.45.1 **AdsClient.TryInvokeRpcMethod Method (String, String, .Object., Object.)**

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
retValue	Type: System.Object . The return value of the RPC method as object.

Return Value

Type: [AdsErrorCode](#) [▶ 664]

The ADS Error Code.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, Object, Object.\)](#) [[▶ 1026](#)]

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [[▶ 2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {

                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TryInvokeRpcMethod Overload](#) [[▶ 327](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.1.2.45.2 **AdsClient.TryInvokeRpcMethod Method (String, String, .Object., .Object., Object.)**

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object[]? outParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object. The parameters.
outParameters	Type: .System.Object.. The out parameters.
retValue	Type: System.Object. The return value of the RPC method as object.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS Error Code.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, .Object., .Object., Object.\)](#) [[▶ 1028](#)]

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [[▶ 2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
```

```

/// <param name="args">The arguments.</param>
static void Main(string[] args)
{
// Get the AdsAddress from command-line arguments
AmsAddress address = ArgParser.Parse(args);

using (AdsClient client = new AdsClient())
{
    //client.Synchronize = false;

    // Connect to the target device
    client.Connect(address);

    SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

    // Get the Symbols (Dynamic Symbols)

    IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
the PLC Program

    // Call a Method that has the following signature (within MAIN Program)
    /* {attribute 'TcRpcEnable'}
    METHOD PUBLIC M_Add : INT
    VAR_INPUT
        i1 : INT := 0;
        i2 : INT := 0;
    END_VAR
    */

    short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

    // Call a Method that has no parameter and returns VOID
    main.InvokeRpcMethod("M_Method1", new object[] {});

    //Browsing RpcMethods
    foreach(IRpcMethod method in main.RpcMethods)
    {
        string methodName = method.Name;

        foreach(IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }
}
}
}

```

Reference

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.45.3 **AdsClient.TryInvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object., Object.)**

Invokes the RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    out Object[]? outParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol.
methodName	Type: System.String Name of the method.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The ret specifier (specifying the return value) or NULL.
outParameters	Type: .System.Object . The out parameters.
retValue	Type: System.Object . The return value of the RPC method./>

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
AdsErrorCode.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.. Object.\)](#) [[▶ 1030](#)]

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>

6.2.1.2.45.4 AdsClient.TryInvokeRpcMethod Method (IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object., Object.)

Tries the invoke RPC method.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public AdsErrorCode TryInvokeRpcMethod(
    IRpcCallableInstance symbol,
    IRpcMethod rpcMethod,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpec,
    AnyTypeSpecifier? returnSpec,

```

```

    out Object[]? outParameters,
    out Object?? returnValue
)

```

Parameters

symbol	Type: TwinCAT.TypeSystem.IRpcCallableInstance [▶ 2606] The symbol.
rpcMethod	Type: TwinCAT.TypeSystem.IRpcMethod [▶ 2625] The RPC method.
inParameters	Type: .System.Object . The in parameters.
outSpec	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out spec.
returnSpec	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The return spec.
outParameters	Type: .System.Object .. The out parameters.
returnValue	Type: System.Object . The return value.

Return Value

Type: [AdsErrorCode](#) [▶ 664]
AdsErrorCode.

Implements

[IRpcCallableInstance.InvokeRpcMethod\(IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object., Object.\)](#) [▶ 1031]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	
ArgumentNullException	symbol
ArgumentNullException	rpcMethod

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, are allowed to be empty or NULL.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```

class RpcCallVirtualProgram

6.2.1.2.48 **AdsClient.TryReadState Method**

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryReadState(
    out StateInfo stateInfo
)
```

Parameters

stateInfo	Type: TwinCAT.Ads.StateInfo [▶ 1200]. The ADS statue and device status.
-----------	--

Return Value

Type: [AdsErrorCode](#) [▶ 664]

[AdsErrorCode](#) [▶ 664] of the ADS read state call. Check for [NoError](#) [▶ 664] to see if call was successful.

Implements

[IAdsStateProvider.TryReadState\(StateInfo.\)](#) [▶ 1059]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

Not all ADS Servers support the State ADS Request

6.2.1.2.51.2 **AdsClient.TryReadWrite Method (UInt32, UInt32, Memory`1, Void, Byte)**

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public AdsErrorCode TryReadWrite(  
    uint indexGroup,  
    uint indexOffset,  
    Memory readBuffer,  
    void writeBuffer,  
    byte readBytes  
)
```

Parameters

indexGroup	Type: System.UInt32
indexOffset	Type: System.UInt32
readBuffer	Type: Memory
writeBuffer	Type: System.Void
readBytes	Type: System.Byte

Return Value

Type: [AdsErrorCode \[► 664\]](#)

Reference

[AdsClient Class \[► 183\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.2.51.3 **AdsClient.TryReadWrite Method (UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.)**

ReadWrites value data synchronously to/from the symbol represented by the variableHandle.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryReadWrite(
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    out int readBytes
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
readBuffer	Type: System.Memory.Byte . The read buffer / read data.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer / write data.
readBytes	Type: System.Int32 . Number of read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Implements

[IAdsHandle.TryReadWrite\(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.\)](#) [[▶ 963](#)]

6.2.1.2.51.4 AdsClient.TryReadWrite Method (UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.)

Writes data synchronously to an ADS device and reads data from that device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryReadWrite(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    out int readBytes
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
readBytes	Type: System.Int32 . The read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS Error code.

Implements

6.2.1.2.55 AdsClient.TryWriteValue Method**Overload List**

	Name	Description
	TryWriteValue(ISymbol, Object) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T.(ISymbol, T) [▶ 356]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 354]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T.(String, T) [▶ 355]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

6.2.1.2.56 AdsClient.UnregisterAdsStateChangedAsync Method

unregister ads state changed as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> UnregisterAdsStateChangedAsync (
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsStateChangedEventArgs [▶ 729]. The handler function to be unregistered.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [► 1116].

A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The [ResultAds](#) [► 1116] parameter contains the state the [ErrorCode](#) [► 1120] of the ADS communication after execution.

Implements

[IAdsStateProvider.UnregisterAdsStateChangedAsync\(EventHandler.AdsStateChangedEventArgs, CancellationToken\)](#) [► 1060]

Exceptions

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void WriteAny(
    uint variableHandle,
    Object value,
    int[]? args
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
value	Type: System.Object Object to write to the ADS device.
args	Type: .System.Int32 . Additional arguments.

Implements

[IAdsAnyAccess.WriteAny\(UInt32, Object, .Int32.\)](#) [► 829]

Remarks

Type of value Parameter	Necessary Arguments (args)
string	args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [▶ 2927].
string[]	
Array

6.2.1.2.60.1 **AdsClient.WriteAnyAsync Method (UInt32, Object, CancellationTokent)**

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteAnyAsync(
    uint variableHandle,
    Object value,
    CancellationTokent cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
value	Type: System.Object Object to write to the ADS device.
cancel	Type: System.Threading.CancellationTokent The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [▶ 1187].

A task that represents the asynchronous task operation. The result parameter [ResultWrite](#) [▶ 1187] of the write operation contains the [ErrorCode](#) [▶ 1120].

Implements

[IAdsAnyAccess.WriteAnyAsync\(UInt32, Object, CancellationToken\) \[► 832\]](#)

Remarks

Type of value Parameter	Necessary Arguments (args)
string	args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [► 2927] .

Write the value of an Anytype (Primitive type) asynchronously.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
value	Type: System.Object The value.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite \[▸ 1187\]](#).

A task that represents the asynchronous 'ReadState' operation. The [ResultWrite \[▸ 1187\]](#) parameter contains the value the [ErrorCode \[▸ 1120\]](#) of the ADS communication after execution.

Implements

6.2.1.2.61.1 AdsClient.WriteAnyStringAsync Method (String, String, Int32, Encoding, CancellationToken)

Writes the string (Potentially unsafe!)

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public Task<ResultWrite> WriteAnyStringAsync(
    string symbolPath,
    string value,
    int length,
    Encoding encoding,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol path.
value	Type: System.String The value.
length	Type: System.Int32 The length of the string to write
encoding	Type: System.Text.Encoding The encoding.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [[▶ 1187](#)].
Task<ResultWrite>.

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

ATTENTION: Potentially this method is unsafe because following data can be overwritten after the string symbol. Please be sure to specify the string length lower than the string size reserved within the process image! The String is written with the specified encoding.

6.2.1.2.65 AdsClient.WriteSymbolAsync Method

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteSymbolAsync (
    string name,
    Object value,
    CancellationToken cancel
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
value	Type: System.Object Object holding the value to be written to the ADS symbol
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultWrite \[▶ 1187\]](#).

A task that represents the asynchronous 'WriteSymbol' operation. The [ResultWrite \[▶ 1187\]](#) parameter contains the [ErrorCode \[▶ 1120\]](#) after execution.

6.2.1.2.66 AdsClient.WriteValue Method

Overload List

	Name	Description
	WriteValue(ISymbol, Object) [▶ 383]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

	Name	Description
	WriteValue.T. (ISymbol, T) [► 384]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [► 382]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue.T.(String, T) [► 382]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

6.2.1.3 AdsClient Events

The [AdsClient](#) [[▶ 183](#)] type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 390]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 391]	Occurs when a exception has occurred during notification management.
 	AdsNotificationEx [▶ 391]	Occurs when the ADS devices sends a notification to the client.
	AdsNotificationsInvalidated [▶ 396]	Occurs when Notification Unregistrations / Invalidates are received from the AdsServer
	AdsStateChanged [▶ 392]	Occurs when the ADS state changes.
 	AdsSumNotification [▶ 393]	Occurs when Notifications are send (bundled notifications)
	AdsSymbolVersionChanged [▶ 394]	Occurs when the symbol version has been changed changes.
	ConnectionStateChanged [▶ 395]	Occurs when the connection state has been changed.
	RouterStateChanged [▶ 395]	(Local) Router state changed event.

Reference

[AdsClient Class](#) [[▶ 183](#)]

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.3.1 AdsClient.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationEventArgs> AdsNotification
```

Value

Type: [System.EventHandler.AdsNotificationEventArgs \[► 695\]](#).

Implements

[IAdsNotifications.AdsNotification \[► 991\]](#)

Remarks

The Event Argument contains the raw data value of the notification, not marshaled to .NET types.

Examples

Example of receiving AdsNotification events.

Trigger on changed values by ADS Notifications

```
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms

        //byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);
}
```

```
// If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
// we could synchronize via SynchronizationContext into the UI Thread

/*SynchronizationContext syncContext = SynchronizationContext.Current;
   _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

Reference

[AdsClient Class \[► 183\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.3.2 AdsClient.AdsNotificationError Event

Occurs when a exception has occurred during notification management.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError
```

Value

Type: [System.EventHandler.AdsNotificationErrorEventArgs \[► 694\]](#).

Implements

[IAdsNotifications.AdsNotificationError \[► 993\]](#)

Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the [AdsInvalidNotificationException \[► 690\]](#) which describes the invalid notification handle by its [Handle \[► 692\]](#) property.

Reference

[AdsClient Class \[► 183\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

[TwinCAT.Ads.AdsInvalidNotificationException \[► 690\]](#)

[AdsClient.AdsNotification \[► 390\]](#)

[AdsClient.AdsNotificationEx \[► 391\]](#)

6.2.1.3.3 AdsClient.AdsNotificationEx Event

Occurs when the ADS devices sends a notification to the client.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

Value

Type: [System.EventHandler.AdsNotificationExEventArgs](#) [► 699].

Implements

[IAdsNotifications.AdsNotificationEx](#) [► 993]

Remarks

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshallers.

Examples

Example of receiving AdsNotificationEx events.

Trigger on changed values by ADS Notifications

```
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new Notifica
tionSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ...
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, ca
ncel); // Unregister Event
}
```

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.3.4 AdsClient.AdsStateChanged Event

Occurs when the ADS state changes.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsStateChangedEventArgs> AdsStateChanged
```

Value

Type: [System.EventHandler.AdsStateChangedEventArgs](#) [► 729].

Implements

[IAdsStateProvider.AdsStateChanged](#) [► 1061]

Remarks

This works only for ports that support Notifications (e.g. Port 851 but not Port 10000).

Reference

[AdsClient Class](#) [► 183]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.1.3.5 AdsClient.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```

Value

Type: [System.EventHandler.AdsSumNotificationEventArgs](#).

Implements

[IAdsNotifications.AdsSumNotification](#) [► 994]

Remarks

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The [AdsNotification](#) [► 390] and [AdsNotificationEx](#) [► 391] events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this AdsSumNotification event. The full performance is reached only, when all notifications are handled on this event.

Examples

Example of receiving AdsSumNotification events.

Trigger on changed values by ADS Notifications

```
private async Task RegisterSumNotificationsAsync()  
{  
    CancellationToken cancel = CancellationToken.None;  
  
    using (AdsClient client = new AdsClient())  
    {  
        // Add the Notification event handler  
        client.AdsSumNotification += Client_SumNotification;  
  
        // Connect to target  
        client.Connect(AmsNetId.Local, 851);  
        uint notificationHandle = 0;
```

```

// Notification to a DINT Type (UINT32)
// Check for change every 200 ms

//byte[] notificationBuffer = new byte[sizeof(UInt32)];

ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

if (result.Succeeded)
{
    notificationHandle = result.Handle;
    await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
    // Unregister the Event / Handle
    ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
}
client.AdsNotification -= Client_AdsNotification2;
}
}

private void Client_SumNotification(object sender, AdsSumNotificationEventArgs e)
{
    // Timestamp of the Notification List
    DateTimeOffset dateTime = e.TimeStamp;

    // List of Raw ADS Notifications
    IList<Notification> notifications = e.Notifications;

    foreach(Notification notification in notifications)
    {
        // Notifications can be handled more efficiently, because they occur together
        // handler and can be transformed/
        // synchronized in one step compared to AdsClient.AdsNotification events.
    }
}

```

[AdsClient.AdsNotification \[► 390\]](#)

6.2.1.3.6 AdsClient.AdsSymbolVersionChanged Event

Occurs when the symbol version has been changed changes.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsSymbolVersionChangedEventArgs> AdsSymbolVersionChanged
```

Value

Type: [System.EventHandler.AdsSymbolVersionChangedEventArgs \[► 739\]](#).

Implements

[IAdsSymbolChangedProvider.AdsSymbolVersionChanged \[► 1065\]](#)

Remarks

This is the case when the connected ADS server restarts. This invalidates all actual opened symbol handles. The SymbolVersion counter doesn't trigger, when an online change is made on the PLC (ports 801, ..., 851 ...)

Reference[AdsClient Class \[► 183\]](#)[TwinCAT.Ads Namespace \[► 179\]](#)**6.2.1.3.7 AdsClient.ConnectionStateChanged Event**

Occurs when the connection state has been changed.

Namespace: [TwinCAT.Ads \[► 179\]](#)**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229**Syntax****C#**

```
public event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: [System.EventHandler.ConnectionStateChangedEventArgs \[► 74\]](#).

Implements[IConnectionStateProvider.ConnectionStateChanged \[► 91\]](#)**Reference**[AdsClient Class \[► 183\]](#)[TwinCAT.Ads Namespace \[► 179\]](#)**6.2.1.3.8 AdsClient.RouterStateChanged Event**

(Local) Router state changed event.

Namespace: [TwinCAT.Ads \[► 179\]](#)**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229**Syntax****C#**

```
public event EventHandler<AmsRouterNotificationEventArgs> RouterStateChanged
```

Value

Type: [System.EventHandler.AmsRouterNotificationEventArgs \[► 798\]](#).

Implements[IRouterNotificationProvider.RouterStateChanged \[► 1100\]](#)**Exceptions**

Exception	Condition
ObjectDisposedException	

Remarks

This event indicates, that a changed event is received from the Local AmsRouter independant of the connected target address. A remote system RouterStateChanged event cannot be received at another system - it cannot traverse TwinCAT systems.

Reference

[AdsClient Class \[► 183\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.1.3.9 AdsClient.AdsNotificationsInvalidated Event

Occurs when Notification Unregistrations / Invalidates are received from the AdsServer

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public event EventHandler<AdsNotificationsInvalidatedEventArgs> AdsNotificationsInvalidated
```

Value

Type: [System.EventHandler.AdsNotificationsInvalidatedEventArgs \[► 1228\]](#).

Remarks

Some ADS servers are sending 0-size notifications, when the Notification handle is not valid anymore. If received, this event will be triggered, to notify any consumers to invalidate the notification handles. One example for these sort of invalidation is, if ADS Notifications are already registered at the PLC ADS Server, and the PLC Control downloads a new program. All registered notification handles are invalidated!

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsClient(
    ISession? session,
    AdsClientSettings settings,
    ILogger? logger
)
```

Parameters

session	Type: TwinCAT.ISession [▶ 92] The session.
settings	Type: TwinCAT.Ads.AdsClientSettings [▶ 399] The settings.
logger	Type: Microsoft.Extensions.Logging.ILogger The logger.

Reference

[AdsClient Class](#) [▶ 183]

[AdsClient Overload](#) [▶ 396]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.2 AdsClientSettings Class

Settings object for the [AdsClient](#) [▶ 183] class.

Inheritance Hierarchy

[System.Object](#)

TwinCAT.Ads.AdsClientSettings

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class AdsClientSettings
```

The AdsClientSettings type exposes the following members.

Constructors

	Name	Description
	AdsClientSettings [▶ 400]	Creates a Default settings AdsClientSettings object with custom timeout.

Properties

	Name	Description
	CompatibilityDefault t [▶ 401]	Compatibility settings object
	Default [▶ 402]	Gets the default settings (Default interceptors, Timeout 5000 ms)

	Name	Description
		
	FastWriteThrough [▶ 402]	Gets a Settings object that configures the AdsClient for FastWriteThrough
		
	Timeout [▶ 403]	The communication Timeout that is set initially on the AdsClient [▶ 183]

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

This [AdsClientSettings](#) object is used to initialize the [AdsClient](#) [▶ 183] with application appropriate settings. Several predefined application dependant settings are available as static properties:

- [Default](#) [▶ 402]
- [FastWriteThrough](#) [▶ 402]
- [CompatibilityDefault](#) [▶ 401]

Reference

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.2.1 AdsClientSettings Constructor

Creates a Default settings [AdsClientSettings](#) [▶ 399] object with custom timeout.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: [TwinCAT.Ads](#) (in [TwinCAT.Ads.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsClientSettings(
    int timeout
)
```

Parameters

timeout	Type: System.Int32 The timeout of the AdsClient [▶ 183] in milliseconds.
---------	---

Reference

[AdsClientSettings Class \[▶ 399\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.2.2 AdsClientSettings Properties

The [AdsClientSettings \[▶ 399\]](#) type exposes the following members.

Properties

	Name	Description
 S	CompatibilityDefault [▶ 401]	Compatibility settings object
 S	Default [▶ 402]	Gets the default settings (Default interceptors, Timeout 5000 ms)
 S	FastWriteThrough [▶ 402]	Gets a Settings object that configures the AdsClient for FastWriteThrough
	Timeout [▶ 403]	The communication Timeout that is set initially on the AdsClient [▶ 183]

Reference

[AdsClientSettings Class \[▶ 399\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.2.2.1 AdsClientSettings.CompatibilityDefault Property

Compatibility settings object

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AdsClientSettings CompatibilityDefault { get; }
```

Property Value

Type: [AdsClientSettings \[▶ 399\]](#)

The settings object.

Remarks

The compatibility settings initialize the AdsClient the same way as it is done in earlier versions of the TwinCAT.Ads.dll (earlier than Version 4.2)

- [All \[▶ 1212\]](#)
- No FailFastHandlerInterceptor active.
- Default communicationtimeout 5000ms.
- Synchronized Notifications.

Reference

[AdsClientSettings Class \[► 399\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.2.2.2 AdsClientSettings.Default Property

Gets the default settings (Default interceptors, Timeout 5000 ms)

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AdsClientSettings Default { get; }
```

Property Value

Type: [AdsClientSettings \[► 399\]](#)

The default.

Remarks

Creates an settings object, with specification for [All \[► 1212\]](#) and [FailFastHandlerInterceptor](#).

- [All \[► 1212\]](#)
- [FailFastHandlerInterceptor](#) is active.
- Default communication timeout 5000ms.
- Not synchronized Notifications.

Reference

[AdsClientSettings Class \[► 399\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.2.2.3 AdsClientSettings.FastWriteThrough Property

Gets a Settings object that configures the AdsClient for FastWriteThrough

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AdsClientSettings FastWriteThrough { get; }
```

Property Value

Type: [AdsClientSettings \[► 399\]](#)

Client settings for a fast write through (with 200 ms Timeout).

Remarks

The settings typically can be used for polling clients, where the "FailFast" feature will be bypassed. That means, that communication fails doesn't trigger the FailFast interceptor and every Request will go out via ADS. This has the Drawback that communication Timeouts are longer and subsequent timeouts block the ADS mailbox (with the danger of overflows). So use this setting with care for specific purposes and should not be used for standard communication.

- No FailFastHandlerInterceptor active.
- Default communicationtimeout 200ms.
- Not synchronized Notifications.

Reference

[AdsClientSettings Class](#) [► 399]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.2.4 AdsClientSettings.Timeout Property

The communication Timeout that is set initially on the [AdsClient](#) [► 183]

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Timeout { get; set; }
```

Property Value

Type: [Int32](#)
The timeout.

Remarks

Setting the Settings Timeout doesn't change the IConnection timeout after the connection is established.

Reference

6.2.3 AdsCommandId Enumeration

AdsCommandId Enumeration

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AdsCommandId
```

Members

	Member name	Value	Description
	None	0	None / Uninitialized
	Invalid	0	Invalid
	ReadDeviceInfo	1	ReadDeviceInfo command
	Read	2	Read Command
	Write	3	Write Command
	ReadState	4	ReadState Command
	WriteControl	5	WriteControl Command
	AddNotification	6	AddNotification Command
	DeleteNotification	7	DeleteNotification Command
	Notification	8	Notification event.
	ReadWrite	9	ReadWrite Command

Reference

6.2.4 AdsCommunicationStatistics Class

ADS Communication statistics

Inheritance Hierarchy

[System.Object](#)

 TwinCAT.Ads.AdsCommunicationStatistics

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public class AdsCommunicationStatistics
```

The AdsCommunicationStatistics type exposes the following members.

Properties

	Name	Description
	AccessWaitTime [▶ 407]	Gets the wait time for the next access (Resurrection time) if in Lost [▶ 72].
	ConnectionActiveSi nce [▶ 407]	Gets the UTC time of the last conenction activation.
	ConnectionEstablish edAt [▶ 407]	Gets the UTC time when the current connection was established.
	ConnectionLostCou nt [▶ 408]	Gets the connection lost count.
	ConnectionLostTim e [▶ 408]	Gets the UTC connection lost time.
	ConnectionResurrec tions [▶ 409]	Gets the number of resurrections on the AdsConnection [▶ 412]
	ErrorsSinceLastSucc eeded [▶ 409]	Gets the error count since last access (UTC)
	LastSucceededAcce ss [▶ 410]	Gets the UTC time of the last succeeded access.
	Resurrections [▶ 410]	Gets the number of Resurrections of this Session.
	SessionEstablishedA t [▶ 410]	Gets the UTC time when the session was established.
	TotalCycles [▶ 411]	Gets the total cycles.
	TotalErrors [▶ 411]	Gets the total error count.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)

	Name	Description
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

These statistics can be used for communication diagnosis. They contain Error/Succeed counts as well as Resurrection infos.

6.2.5 AdsConnection Class

ADS Connection class

Inheritance Hierarchy

[System.Object](#)

 TwinCAT.Ads.AdsConnection

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public sealed class AdsConnection : IAdsConnection,
    IConnection, IConnectionStateProvider, IAdsNotifications, IAdsSymbolicAccess, IAdsAnyAccess,
    IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider, IAdsStateControl,
    IAdsSymbolChangedProvider, IAdsRpcInvoke, IAdsReadWriteTimeoutAccess, IAdsStateControlTimeout, I
    Disposable
```

The [AdsConnection](#) type exposes the following members.

Properties

	Name	Description
	AccessWaitTime [► 435]	Gets the access wait time.
	ActiveSince [► 435]	Gets the UTC time when the last active/resurrected Connection was established
	Address [► 436]	Gets the AmsAddress [► 752] of the ADS server.
	ClientAddress [► 436]	Get the AmsAddress [► 752] of the ADS client.

	Name	Description
	ConnectionEstablishedAt [▶ 437]	Gets the UTC time when the Connection was originally established.
	ConnectionLostTime [▶ 438]	Gets the connection lost time.
 	ConnectionState [▶ 438]	Gets the current Connection state of the AdsConnection
	DefaultValueEncoding [▶ 439]	Gets the default value encoding.
	Disposed [▶ 440]	Gets a value indicating whether this AdsConnection is disposed.
	Id [▶ 440]	Gets the AdsConnection identifier.
	IsActive [▶ 441]	Gets a value indicating whether communication is in active state
	IsConnected [▶ 441]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.
	IsLocal [▶ 441]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	IsLost [▶ 442]	Gets a value indicating whether the communication is in lost / open state
	IsReconnecting [▶ 442]	Gets a value indicating whether communication is ready for reconnecting
	Name [▶ 443]	Gets the name of this AdsConnection.
	Session [▶ 444]	Gets the Session object of the AdsConnection object.
	State [▶ 444]	Gets the current ConnectionState [▶ 438]
	Timeout [▶ 445]	Gets the timeout (in milliseconds)
	TotalConnectionLosses [▶ 445]	Gets the connection lost count.
	TotalResurrectingTries [▶ 446]	Gets the number of tries to resurrect the AdsConnection.
	TotalResurrections [▶ 446]	Gets the number of succeeded connection resurrections.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 467]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.

	Name	Description
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 468]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 470]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 471]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 652] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 473]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 474]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 475]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 476]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.
	AddDeviceNotificationExAsync(String, NotificationSettings,	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.

	Name	Description
	Object, Type, .Int32, CancellationToken [▶ 478]	
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32, CancellationToken) [▶ 479]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	CleanupSymbolTable [▶ 480]	Clears the internal symbol cache.
	Close [▶ 481]	Closes the AdsConnection
	Connect [▶ 481]	(Re)Connects the IConnection [▶ 79] when disconnected.
	CreateVariableHandle [▶ 493]	Generates a unique handle for an ADS variable.
	CreateVariableHandleAsync [▶ 494]	Determines the Symbol handle by its instance path asynchronously.
	DeleteDeviceNotification [▶ 495]	Deletes an existing notification.
	DeleteDeviceNotificationAsync [▶ 495]	Deletes a registered notification asynchronously.
	DeleteVariableHandle [▶ 496]	Releases the handle of a ADS variable again.
	DeleteVariableHandleAsync [▶ 497]	Releases the handle of a ADS variable again (asynchronously)
	Disconnect [▶ 498]	Disconnects this IConnection [▶ 79].
	Dispose [▶ 498]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
 	InvokeRpcMethod(String, String, .Object.) [▶ 499]	Invokes the specified RPC Method

	Name	Description
 	InvokeRpcMethod(String, Object, Object.) [▶ 501]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, Object, AnyTypeSpecifier) [▶ 504]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object..) [▶ 502]	Invokes the specified RPC Method
 	InvokeRpcMethodAsync(String, Object, CancellationToken) [▶ 506]	Invokes the specified RPC Method asynchronously
 	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 510]	Invokes the specified RPC Method asynchronously
 	InvokeRpcMethodAsync(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 508]	Invokes the specified RPC Method asynchronously
	Read(UInt32, Memory.Byte.) [▶ 514]	Reads the value from the symbol that is represented by the handle.
	Read(UInt32, UInt32, Memory.Byte.) [▶ 515]	Reads data synchronously from an ADS device and writes it to the given readBuffer
	Read(UInt32, UInt32, Memory.Byte., Int32.) [▶ 516]	Reads data synchronously from an ADS device and writes it to the given stream.

	Name	Description
	ReadAny(UInt32, Type) [▶ 519]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, Type, .Int32.) [▶ 520]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type) [▶ 522]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 523]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, .Int32., Int32) [▶ 524]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32) [▶ 517]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, .Int32.) [▶ 518]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32) [▶ 519]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 521]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 528]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 529]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 532]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 532]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 526]	Reads data synchronously from an ADS device.

	Name	Description
	ReadAnyAsync.T. (UInt32, Int32, CancellationToken) [▶ 527]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 529]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, Int32, CancellationToken) [▶ 531]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyString(UInt 32, Int32, Encoding) [▶ 534]	Reads a string from the specified symbol/variable.
	ReadAnyString(UInt 32, UInt32, Int32, Encoding) [▶ 535]	Reads as string from a specified address.
	ReadAnyStringAsyn c(UInt32, Int32, Encoding, CancellationToken) [▶ 536]	Reads a string asynchronously from the specified symbol/variable
	ReadAnyStringAsyn c(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 537]	read any string as an asynchronous operation.
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 540]	Reads the value data of the symbol asynchronously into the readBuffer.
	ReadAsync(UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 541]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadDataType [▶ 541]	Call this method to obtain information about the specified data type.
	ReadDataTypeAsyn c [▶ 542]	read data type as an asynchronous operation.
	ReadDeviceInfo [▶ 543]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsyn c [▶ 544]	Reads the identification and version number of an ADS server.

	Name	Description
	ReadState. [▶ 545]	Reads the ADS status and the device status from an ADS server.
	ReadState(Int32) ▶ 546	Reads the ADS status and the device status from an ADS server.
	ReadStateAsync ▶ 546	Read the ADS State asynchronously
	ReadSymbol. [▶ 547]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadSymbolAsync ▶ 548	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadValue(ISymbol) ▶ 549	Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValue(String, Type) [▶ 551]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
	ReadValue.T. (ISymbol) [▶ 550]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) ▶ 549	Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.
	ReadValueAsync(ISymbol, CancellationToken) ▶ 553	Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValueAsync(String, Type, CancellationToken) ▶ 555	Reads the value of a symbol asynchronously.
	ReadValueAsync.T. (ISymbol, CancellationToken) ▶ 554	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync.T. (String, CancellationToken) ▶ 552	Reads the value of a symbol asynchronously.
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 558]	Writes data synchronously to an ADS device and then Reads data from that target.
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 559]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32) [▶ 560]	Writes data synchronously to an ADS device and then Reads data from this device.

	Name	Description
	ReadWriteAsync(UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken) [▶ 563]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	ReadWriteAsync(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken) [▶ 564]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	RegisterAdsStateChangedAsync [▶ 565]	Registers for AdsStateChanged [▶ 655] events as an asynchronous operation.
	RegisterSymbolVersionChanged [▶ 650]	Registers the symbol version changed.
	RegisterSymbolVersionChangedAsync [▶ 565]	Registers the symbol version changed asynchronously.
	ToString	Returns a string that represents the current object. (Inherited from Object .)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 567]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 568]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 570]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 571]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.

	Name	Description
	TryCreateVariableHandle [▶ 572]	Read (determine) the Symbol handle by its name/path
	TryDeleteDeviceNotification [▶ 572]	Deletes a registered notification.
	TryDeleteVariableHandle [▶ 573]	Releases the specified symbol/variable handle synchronously.
 	TryInvokeRpcMethod(String, String, .Object, Object.) [▶ 575]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, .Object, .Object, Object.) [▶ 577]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, .Object, Object.) [▶ 580]	Invokes the rpc method.
 	TryInvokeRpcMethod(String, String, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, .Object, Object.) [▶ 578]	Invokes the rpc method.
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 585]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 586]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryRead(UInt32, UInt32, Memory.Byte, Int32, Int32.) [▶ 586]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryReadDataType [▶ 587]	Call this method to obtain information about the specified data type.

	Name	Description
	TryReadState(StateInfo.) [▶ 589]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadState(Int32, StateInfo.) [▶ 589]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadSymbol [▶ 590]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	TryReadValue(ISymbol, Object.) [▶ 592]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
	TryReadValue(String, Type, Object.) [▶ 594]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T.(ISymbol, T.) [▶ 593]	Reads the value of a symbol and returns it as an object.
	TryReadValue.T.(String, T.) [▶ 591]	Reads the value of a symbol and returns the value as object.
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 597]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 598]	Writes data synchronously to an ADS device and reads data from that device.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32, Int32.) [▶ 599]	Writes data synchronously to an ADS device and then Reads data from this device.
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 603]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 604]	Writes data synchronously to an ADS device.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte., Int32) [▶ 604]	Writes data synchronously to an ADS device.

	Name	Description
	TryWriteControl(StationInfo) [▶ 606]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StationInfo, Int32) [▶ 606]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StationInfo, ReadOnlyMemory.Byte) [▶ 608]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StationInfo, ReadOnlyMemory.Byte, Int32) [▶ 609]	Changes the ADS status and the device status of an ADS server.
	TryWriteValue(ISymbol, Object) [▶ 612]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T.(ISymbol, T) [▶ 613]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T.(String, T) [▶ 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	UnregisterAdsStateChangedAsync [▶ 614]	Registers for AdsStateChanged [▶ 655] events as an asynchronous operation.
	UnregisterSymbolVersionChanged [▶ 651]	Unregisters the symbol version changed.
	UnregisterSymbolVersionChangedAsync [▶ 614]	Unregisters the symbol version changed asynchronous.
	Write(UInt32, ReadOnlyMemory.Byte) [▶ 619]	Writes data synchronously to an ADS device.
	Write(UInt32, UInt32) [▶ 616]	Trigger Client Method/Command.
	Write(UInt32, UInt32, Int32) [▶ 617]	Trigger Client Method/Command.

	Name	Description
	<u>Write(UInt32, UInt32, ReadOnlyMemory.BYTE)</u> [▶ 619]	Writes data synchronously to an ADS device.
	<u>Write(UInt32, UInt32, ReadOnlyMemory.BYTE, Int32)</u> [▶ 620]	Writes data synchronously to an ADS device.
	<u>WriteAny(UInt32, Object)</u> [▶ 621]	Writes an object synchronously to an ADS device.
	<u>WriteAny(UInt32, Object, .Int32.)</u> [▶ 622]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAny(UInt32, UInt32, Object)</u> [▶ 623]	Writes an object synchronously to an ADS device.
	<u>WriteAny(UInt32, UInt32, Object, .Int32.)</u> [▶ 623]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAny(UInt32, UInt32, Object, .Int32., Int32)</u> [▶ 624]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, Object, CancellationToken)</u> [▶ 626]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, Object, .Int32., CancellationToken)</u> [▶ 627]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, UInt32, Object, CancellationToken)</u> [▶ 628]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, UInt32, Object, .Int32., CancellationToken)</u> [▶ 628]	write any as an asynchronous operation.
	<u>WriteAnyStringAsync(String, String, Int32, Encoding, CancellationToken)</u> [▶ 630]	write any string as an asynchronous operation.

	Name	Description
	<u>WriteAnyStringAsync</u> (UInt32, String, Int32, Encoding, CancellationToken) [▶ 631]	write any string as an asynchronous operation.
	<u>WriteAsync</u> (UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 634]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.
	<u>WriteAsync</u> (UInt32, UInt32, CancellationToken) [▶ 633]	Triggers a write call at the specified IndexGroup/IndexOffset asynchronously.
	<u>WriteAsync</u> (UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 635]	Writes the data / Value asynchronously into the specified writeBuffer.
	<u>WriteControl</u> (StateInfo) [▶ 637]	Changes the ADS status and the device status of an ADS server.
	<u>WriteControl</u> (StateInfo, Int32) [▶ 637]	Changes the ADS status and the device status of an ADS server.
	<u>WriteControl</u> (StateInfo, ReadOnlyMemory.Byte) [▶ 639]	Changes the ADS status and the device status of an ADS server.
	<u>WriteControl</u> (StateInfo, ReadOnlyMemory.Byte, Int32) [▶ 640]	Changes the ADS status and the device status of an ADS server.
	<u>WriteControlAsync</u> (AdsState, UInt16, CancellationToken) [▶ 641]	Changes the ADS status and device status of the ADS server asynchronously.
	<u>WriteControlAsync</u> (AdsState, UInt16, ReadOnlyMemory.Byte, CancellationToken) [▶ 642]	Writes the AdsState [▶ 729] and device state to the ADS device.
	<u>WriteSymbolAsync</u> [▶ 643]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

	Name	Description
	WriteValue(ISymbol, Object) [▶ 646]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 644]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue.T. (ISymbol, T) [▶ 646]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 645]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 648]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (ISymbol, T, CancellationToken) [▶ 649]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (String, T, CancellationToken) [▶ 648]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Events

	Name	Description
 	AdsNotification [▶ 652]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 654]	Occurs when a exception has occurred during notification management.
 	AdsNotificationEx [▶ 654]	Occurs when the ADS devices sends a notification to the client.
	AdsStateChanged [▶ 655]	Occurs when ADS State has been changed.
 	AdsSumNotification [▶ 656]	Occurs when Notifications are send (bundled notifications)
	AdsSymbolVersionC hanged [▶ 657]	Occurs when the symbol version has been changed.
 	ConnectionStateCha nged [▶ 658]	Occurs when connection status of the AdsConnection has been changed.

	Name	Description
	RouterStateChanged [▶ 659]	(Local) Router state changed event.

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(TimeSpan, Cancellation.Token) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceStateAsync(IObservable.Unit., CancellationToken) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceStateAsync(TimeSpan, CancellationToken) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281].)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues(ISymbol, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	<code>PollValues.T.(String, IObservable.Unit.)</code> [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String, TimeSpan)</code> [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(ISymbol, IObservable.Unit, Func.Exception, T.)</code> [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(ISymbol, TimeSpan, Func.Exception, T.)</code> [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(ISymbol, .Int32, IObservable.Unit.)</code> [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.(ISymbol, .Int32, TimeSpan)</code> [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String, IObservable.Unit, Func.Exception, T.)</code> [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String, TimeSpan, Func.Exception, T.)</code> [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(String, .Int32, IObservable.Unit.)</code> [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.(String, .Int32, TimeSpan)</code> [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues.T.(ISymbol, .Int32, IObservable.Unit, Func.Exception, T.)</code> [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.(ISymbol, .Int32, TimeSpan, Func.Exception, T.)</code> [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	<code>PollValues.T.</code> (String, .Int32., IObservable.Unit., Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	<code>PollValues.T.</code> (String, .Int32., TimeSpan, Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues2.T.</code> (ISymbol, .Int32., IObservable.Unit.) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>PollValues2.T.</code> (String, .Int32., IObservable.Unit.) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	<code>ReadSysServState</code> [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	<code>ReadSysServStateAs ync</code> [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	<code>ReadWithFallback(U Int32, UInt32, Memory.Byte., UInt32, Boolean.)</code> [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	<code>ReadWithFallback(U Int32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.)</code> [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	<code>ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken)</code> [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	<code>ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead,</code>	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	Boolean., CancellationToken [▶ 1222]	
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [▶ 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RestartTwinCATAsync [▶ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	SetAdsState [▶ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	SetAdsStateAsync [▶ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	WaitUntilRestarted [▶ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▶ 3281].)
	WaitUntilRestartedAsync [▶ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
 	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol) [▶ 1263]	Overloaded. Gets an observable sequence of Notification [▶ 1100]s. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
 	WhenNotification(ISymbolCollection) [▶ 1264]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenSymbolVersionChanges . [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

Remarks

The ADS Connection class represents an ADS Point-to-Point Connection between client and server. It is established by using the Connect method of the [AdsSession](#) [[▶ 701](#)] object. An ADS Connection can have different [ConnectionStates](#) [[▶ 438](#)], which represent the state of the logical ADS connection.

6.2.5.1 AdsConnection Properties

The [AdsConnection](#) [[▶ 412](#)] type exposes the following members.

Properties

	Name	Description
	AccessWaitTime [▶ 435]	Gets the access wait time.
	ActiveSince [▶ 435]	Gets the UTC time when the last active/resurrected Connection was established
	Address [▶ 436]	Gets the AmsAddress [▶ 752] of the ADS server.
	ClientAddress [▶ 436]	Get the AmsAddress [▶ 752] of the ADS client.
	ConnectionEstablishedAt [▶ 437]	Gets the UTC time when the Connection was originally established.
	ConnectionLostTime [▶ 438]	Gets the connection lost time.
 	ConnectionState [▶ 438]	Gets the current Connection state of the AdsConnection [▶ 412]
	DefaultValueEncoding [▶ 439]	Gets the default value encoding.
	Disposed [▶ 440]	Gets a value indicating whether this AdsConnection [▶ 412] is disposed.
	Id [▶ 440]	Gets the AdsConnection [▶ 412] identifier.
	IsActive [▶ 441]	Gets a value indicating whether communication is in active state
	IsConnected [▶ 441]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.
	IsLocal [▶ 441]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	IsLost [▶ 442]	Gets a value indicating whether the communication is in lost / open state
	IsReconnecting [▶ 442]	Gets a value indicating whether communication is ready for reconnecting
	Name [▶ 443]	Gets the name of this AdsConnection [▶ 412].

	Name	Description
	Session [▶ 444]	Gets the Session object of the AdsConnection [▶ 412] object.
	State [▶ 444]	Gets the current ConnectionState [▶ 438]
	Timeout [▶ 445]	Gets the timeout (in milliseconds)
	TotalConnectionLosses [▶ 445]	Gets the connection lost count.
	TotalResurrectingTries [▶ 446]	Gets the number of tries to resurrect the AdsConnection [▶ 412].
	TotalResurrections [▶ 446]	Gets the number of succeeded connection resurrections.

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.1.1 **AdsConnection.AccessWaitTime** Property

Gets the access wait time.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public TimeSpan AccessWaitTime { get; }
```

Property Value

Type: [TimeSpan](#)

The access wait time.

Remarks

Gets the Wait Time until the next communication try will be done. This time is calculated as follows:
ResurrectionTime - (DateTime.Now - ConnectionLostTime)

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

[AdsConnection.ConnectionLostTime](#) [[▶ 438](#)]

[SessionSettings.ResurrectionTime](#) [[▶ 1197](#)]

6.2.5.1.2 **AdsConnection.ActiveSince** Property

Gets the UTC time when the last active/resurrected Connection was established

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ActiveSince { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).

The active since.

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.3 AdsConnection.Address Property

Gets the [AmsAddress](#) [▶ 752] of the ADS server.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AmsAddress Address { get; }
```

Property Value

Type: [AmsAddress](#) [▶ 752]

The server address.

Implements

[IAdsConnection.Address](#) [▶ 895]

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.4 AdsConnection.ClientAddress Property

Get the [AmsAddress](#) [▶ 752] of the ADS client.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AmsAddress ClientAddress { get; }
```

Property Value

Type: [AmsAddress](#) [► 752]
The client address.

Implements

[IAdsConnection.ClientAddress](#) [► 895]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.5 **AdsConnection.ConnectionEstablishedAt** Property

Gets the UTC time when the Connection was originally established.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ConnectionEstablishedAt { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).
The connection established at.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.6 **AdsConnection.ConnectionLostCount** Property

Gets the connection lost count.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public int ConnectionLostCount { get; }
```

Property Value

Type: [Int32](#)
The connection lost count.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace \[▸ 179\]](#)

6.2.5.1.7 **AdsConnection.ConnectionLostTime** Property

Gets the connection lost time.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public DateTimeOffset? ConnectionLostTime { get; }
```

Property Value

Type: [Nullable.DateTimeOffset](#).

The connection lost time.

Reference

[AdsConnection Class \[▸ 412\]](#)

[TwinCAT.Ads Namespace \[▸ 179\]](#)

6.2.5.1.8 **AdsConnection.ConnectionState** Property

Gets the current Connection state of the [AdsConnection \[▸ 412\]](#)

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public ConnectionState ConnectionState { get; }
```

Property Value

Type: [ConnectionState \[▸ 72\]](#)

The state of the connection.

Implements

[IConnectionStateProvider.ConnectionState \[▸ 90\]](#)

Remarks

The Connection state changes only if the [IConnection \[▸ 79\]](#) is established / shut down or active communication is triggered by the User of the [IConnection \[▸ 79\]](#) object.

Examples

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```
private DispatcherTimer _timer = null;  
private AdsSession _session = null;  
//private AdsConnection _connection = null;
```

```
private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;

    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

6.2.5.1.9 AdsConnection.DefaultValueEncoding Property

Gets the default value encoding.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Encoding DefaultValueEncoding { get; }
```

Property Value

Type: [Encoding](#)

The default value encoding.

Implements

[IConnection.DefaultValueEncoding](#) [► 81]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.10 **AdsConnection.Disposed Property**

Gets a value indicating whether this [AdsConnection](#) [► 412] is disposed.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Disposed { get; }
```

Property Value

Type: [Boolean](#)

true if disposed; otherwise, false.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.11 **AdsConnection.Id Property**

Gets the [AdsConnection](#) [► 412] identifier.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Id { get; }
```

Property Value

Type: [Int32](#)

The identifier.

Implements

[IConnection.Id](#) [► 81]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.12 **AdsConnection.IsActive** Property

Gets a value indicating whether communication is in active state

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsActive { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is active; otherwise, false.

Reference

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.13 **AdsConnection.IsConnected** Property

Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method `ReadState` to determine if the target port is available.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsConnected { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is connected; otherwise, false.

Implements

[IConnection.IsConnected](#) [▶ 82]

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.14 **AdsConnection.IsLocal** Property

Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsLocal { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is local; otherwise, false.

Implements

[IAdsConnection.IsLocal](#) [[▶ 896](#)]

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.1.15 **AdsConnection.IsLost Property**

Gets a value indicating whether the communication is in lost / open state

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsLost { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is lost; otherwise, false.

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.1.16 **AdsConnection.IsReconnecting Property**

Gets a value indicating whether communication is ready for reconnecting

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsReconnecting { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is reconnecting; otherwise, false.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.17 **AdsConnection.Name Property**

Gets the name of this [AdsConnection](#) [► 412].

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public string Name { get; }
```

Property Value

Type: [String](#)
The name.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.18 **AdsConnection.ResurrectingTries Property**

Gets the number of tries to resurrect the [AdsConnection](#) [► 412].

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public int ResurrectingTries { get; }
```

Property Value

Type: [Int32](#)
The number of tried resurrections of the [IConnection](#) [► 79].

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.19 **AdsConnection.Resurrections Property**

Gets the number of succeeded connection resurrections.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public int Resurrections { get; }
```

Property Value

Type: [Int32](#)

The resurrection count.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.20 **AdsConnection.Session Property**

Gets the Session object of the [AdsConnection](#) [► 412] object.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public ISession Session { get; }
```

Property Value

Type: [ISession](#) [► 92]

The client.

Implements

[IConnection.Session](#) [► 82]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.21 **AdsConnection.State Property**

Gets the current [ConnectionState](#) [► 438]

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public ConnectionState State { get; }
```

Property Value

Type: [ConnectionState](#) [► 72]
The state.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.22 **AdsConnection.Timeout Property**

Gets the timeout (in milliseconds)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Timeout { get; set; }
```

Property Value

Type: [Int32](#)
The timeout.

Implements

[IConnection.Timeout](#) [► 83]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.1.23 **AdsConnection.TotalConnectionLosses Property**

Gets the connection lost count.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalConnectionLosses { get; }
```

Property Value

Type: [Int32](#)
The connection lost count.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.24 **AdsConnection.TotalResurrectingTries Property**

Gets the number of tries to resurrect the [AdsConnection](#) [▶ 412].

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalResurrectingTries { get; }
```

Property Value

Type: [Int32](#)

The number of tried resurrections of the [IConnection](#) [▶ 79].

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.1.25 **AdsConnection.TotalResurrections Property**

Gets the number of succeeded connection resurrections.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int TotalResurrections { get; }
```

Property Value

Type: [Int32](#)

The resurrection count.

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2 **AdsConnection Methods**

The [AdsConnection](#) [▶ 412] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 467]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 468]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 470]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 471]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 652] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 473]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 474]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 475]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 476]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.

	Name	Description
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 478]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 479]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	CleanupSymbolTable [▶ 480]	Clears the internal symbol cache.
	Close [▶ 481]	Closes the AdsConnection [▶ 412]
	Connect [▶ 481]	(Re)Connects the IConnection [▶ 79] when disconnected.
	CreateVariableHandle [▶ 493]	Generates a unique handle for an ADS variable.
	CreateVariableHandleAsync [▶ 494]	Determines the Symbol handle by its instance path asynchronously.
	DeleteDeviceNotification [▶ 495]	Deletes an existing notification.
	DeleteDeviceNotificationAsync [▶ 495]	Deletes a registered notification asynchronously.
	DeleteVariableHandle [▶ 496]	Releases the handle of a ADS variable again.
	DeleteVariableHandleAsync [▶ 497]	Releases the handle of a ADS variable again (asynchronously)
	Disconnect [▶ 498]	Disconnects this IConnection [▶ 79].
	Dispose [▶ 498]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)

	Name	Description
 	InvokeRpcMethod(String, .Object.) [▶ 499]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, .Object., .Object.) [▶ 501]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, .Object., AnyTypeSpecifier) [▶ 504]	Invokes the specified RPC Method
 	InvokeRpcMethod(String, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object.) [▶ 502]	Invokes the specified RPC Method
 	InvokeRpcMethodAsync(String, .Object., CancellationToken) [▶ 506]	Invokes the specified RPC Method asynchronously
 	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationToken) [▶ 510]	Invokes the specified RPC Method asynchronously
 	InvokeRpcMethodAsync(String, .Object., .AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 508]	Invokes the specified RPC Method asynchronously
	Read(UInt32, Memory.Byte.) [▶ 514]	Reads the value from the symbol that is represented by the handle.

	Name	Description
	Read(UInt32, UInt32, Memory.Byte.) [▶ 515]	Reads data synchronously from an ADS device and writes it to the given readBuffer
	Read(UInt32, UInt32, Memory.Byte., Int32) [▶ 516]	Reads data synchronously from an ADS device and writes it to the given stream.
	ReadAny(UInt32, Type) [▶ 519]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, Type, .Int32.) [▶ 520]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type) [▶ 522]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 523]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, .Int32., Int32) [▶ 524]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32) [▶ 517]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, .Int32.) [▶ 518]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32) [▶ 519]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 521]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 528]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 529]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 532]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32,	Reads data asynchronously from an ADS device and writes it to an object.

	Name	Description
	Type, .Int32., CancellationToken [▶ 532]	
	ReadAnyAsync.T. (UInt32, CancellationToken) [▶ 526]	Reads data synchronously from an ADS device.
	ReadAnyAsync.T. (UInt32, .Int32., CancellationToken) [▶ 527]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 529]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, .Int32., CancellationToken) [▶ 531]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyString(UInt32, Int32, Encoding) [▶ 534]	Reads a string from the specified symbol/variable.
	ReadAnyString(UInt32, UInt32, Int32, Encoding) [▶ 535]	Reads as string from a specified address.
	ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [▶ 536]	Reads a string asynchronously from the specified symbol/variable
	ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 537]	read any string as an asynchronous operation.
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 540]	Reads the value data of the symbol asynchronously into the readBuffer.
	ReadAsync(UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 541]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadDataType [▶ 541]	Call this method to obtain information about the specified data type.

	Name	Description
	ReadDataTypeAsync [▶ 542]	read data type as an asynchronous operation.
	ReadDeviceInfo [▶ 543]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsync [▶ 544]	Reads the identification and version number of an ADS server.
	ReadState. [▶ 545]	Reads the ADS status and the device status from an ADS server.
	ReadState(Int32) [▶ 546]	Reads the ADS status and the device status from an ADS server.
	ReadStateAsync [▶ 546]	Read the ADS State asynchronously
	ReadSymbol [▶ 547]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadSymbolAsync [▶ 548]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadValue(ISymbol) [▶ 549]	Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValue(String, Type) [▶ 551]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
	ReadValue.T. (ISymbol) [▶ 550]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) [▶ 549]	Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.
	ReadValueAsync(ISymbol, Cancellation Token) [▶ 553]	Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.
	ReadValueAsync(String, Type, Cancellation Token) [▶ 555]	Reads the value of a symbol asynchronously.
	ReadValueAsync.T. (ISymbol, Cancellation Token) [▶ 554]	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync.T. (String, Cancellation Token) [▶ 552]	Reads the value of a symbol asynchronously.
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 558]	Writes data synchronously to an ADS device and then Reads data from that target.

	Name	Description
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 559]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32) [▶ 560]	Writes data synchronously to an ADS device and then Reads data from this device.
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 563]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 564]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	RegisterAdsStateChangedAsync [▶ 565]	Registers for AdsStateChanged [▶ 655] events as an asynchronous operation.
	RegisterSymbolVersionChanged [▶ 650]	Registers the symbol version changed.
	RegisterSymbolVersionChangedAsync [▶ 565]	Registers the symbol version changed asynchronously.
	ToString	Returns a string that represents the current object. (Inherited from Object .)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 567]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 568]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.

	Name	Description
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 570]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 571]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	TryCreateVariableHandle [▶ 572]	Read (determine) the Symbol handle by its name/path
	TryDeleteDeviceNotification [▶ 572]	Deletes a registered notification.
	TryDeleteVariableHandle [▶ 573]	Releases the specified symbol/variable handle synchronously.
 	TryInvokeRpcMethod(String, String, .Object, Object.) [▶ 575]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, .Object., .Object., Object.) [▶ 577]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object..., Object.) [▶ 580]	Invokes the rpc method.
 	TryInvokeRpcMethod(String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..., Object.) [▶ 578]	Invokes the rpc method.

	Name	Description
	TryRead(UInt32, Memory.Byte., Int32.) [▶ 585]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryRead(UInt32, UInt32, Memory.Byte., Int32.) [▶ 586]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryRead(UInt32, UInt32, Memory.Byte., Int32, Int32.) [▶ 586]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryReadDataType [▶ 587]	Call this method to obtain information about the specified data type.
	TryReadState(StateInfo.) [▶ 589]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadState(Int32, StateInfo.) [▶ 589]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryReadSymbol [▶ 590]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	TryReadValue(ISymbol, Object.) [▶ 592]	Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
	TryReadValue(String, Type, Object.) [▶ 594]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T.(ISymbol, T.) [▶ 593]	Reads the value of a symbol and returns it as an object.
	TryReadValue.T.(String, T.) [▶ 591]	Reads the value of a symbol and returns the value as object.
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 597]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 598]	Writes data synchronously to an ADS device and reads data from that device.
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32, Int32.) [▶ 599]	Writes data synchronously to an ADS device and then Reads data from this device.

	Name	Description
	TryWrite(UInt32, ReadOnlyMemory.Byte) [▶ 603]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte) [▶ 604]	Writes data synchronously to an ADS device.
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte, Int32) [▶ 604]	Writes data synchronously to an ADS device.
	TryWriteControl(StateInfo) [▶ 606]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, Int32) [▶ 606]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte) [▶ 608]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte, Int32) [▶ 609]	Changes the ADS status and the device status of an ADS server.
	TryWriteValue(ISymbol, Object) [▶ 612]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T.(ISymbol, T) [▶ 613]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T.(String, T) [▶ 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	UnregisterAdsStateChangedAsync [▶ 614]	Registers for AdsStateChanged [▶ 655] events as an asynchronous operation.
	UnregisterSymbolVersionChanged [▶ 651]	Unregisters the symbol version changed.
	UnregisterSymbolVersionChangedAsync [▶ 614]	Unregisters the symbol version changed asynchronous.

	Name	Description
	<u>Write(UInt32, ReadOnlyMemory.Byte.)</u> [▶ 619]	Writes data synchronously to an ADS device.
	<u>Write(UInt32, UInt32)</u> [▶ 616]	Trigger Client Method/Command.
	<u>Write(UInt32, UInt32, Int32)</u> [▶ 617]	Trigger Client Method/Command.
	<u>Write(UInt32, UInt32, ReadOnlyMemory.Byte.)</u> [▶ 619]	Writes data synchronously to an ADS device.
	<u>Write(UInt32, UInt32, ReadOnlyMemory.Byte., Int32)</u> [▶ 620]	Writes data synchronously to an ADS device.
	<u>WriteAny(UInt32, Object)</u> [▶ 621]	Writes an object synchronously to an ADS device.
	<u>WriteAny(UInt32, Object, .Int32.)</u> [▶ 622]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAny(UInt32, UInt32, Object)</u> [▶ 623]	Writes an object synchronously to an ADS device.
	<u>WriteAny(UInt32, UInt32, Object, .Int32.)</u> [▶ 623]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAny(UInt32, UInt32, Object, .Int32., Int32)</u> [▶ 624]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, Object, CancellationToken)</u> [▶ 626]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, Object, .Int32., CancellationToken)</u> [▶ 627]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, UInt32, Object, CancellationToken)</u> [▶ 628]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	<u>WriteAnyAsync(UInt32, UInt32,</u>	write any as an asynchronous operation.

	Name	Description
	Object, .Int32., CancellationToken [▶ 628]	
	WriteAnyStringAsync(String, String, Int32, Encoding, CancellationToken) [▶ 630]	write any string as an asynchronous operation.
	WriteAnyStringAsync(UInt32, String, Int32, Encoding, CancellationToken) [▶ 631]	write any string as an asynchronous operation.
	WriteAsync(UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 634]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.
	WriteAsync(UInt32, UInt32, CancellationToken) [▶ 633]	Triggers a write call at the specified IndexGroup/IndexOffset asynchronously.
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 635]	Writes the data / Value asynchronously into the specified writeBuffer.
	WriteControl(StateInfo) [▶ 637]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, Int32) [▶ 637]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, ReadOnlyMemory.Byte) [▶ 639]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, ReadOnlyMemory.Byte, Int32) [▶ 640]	Changes the ADS status and the device status of an ADS server.
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 641]	Changes the ADS status and device status of the ADS server asynchronously.

	Name	Description
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.Byte, CancellationToken) [▶ 642]	Writes the AdsState [▶ 729] and device state to the ADS device.
	WriteSymbolAsync [▶ 643]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue(ISymbol, Object) [▶ 646]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 644]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValue.T.(ISymbol, T) [▶ 646]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 645]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 648]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 649]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 648]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., CancellationToken) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2Async(TimeSpan, CancellationToken) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(IObservable.Unit., CancellationToken) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(IObservable.Unit., CancellationToken) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceStateAsync(IObservable.Unit., CancellationToken) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	PollDeviceStateAsync(TimeSpan, CancellationToken) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281].)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues(ISymbol, Type, .Int32., IObservable.Unit., Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., IObservable.Unit., Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit., Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan, Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32., IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32., TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T.(String, IObservable.Unit, Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan, Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, .Int32, IObservable.Unit.) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(String, .Int32, TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32, IObservable.Unit, Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(ISymbol, .Int32, TimeSpan, Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, .Int32, IObservable.Unit, Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(String, .Int32, TimeSpan, Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T.(ISymbol, .Int32, IObservable.Unit.) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T.(String, .Int32, IObservable.Unit.) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAsync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)

	Name	Description
	ReadWithFallback(UInt32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32,	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [▶ 1227]	
	RestartTwinCATAsync [▶ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	SetAdsState [▶ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	SetAdsStateAsync [▶ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	WaitUntilRestarted [▶ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▶ 3281].)
	WaitUntilRestartedAsync [▶ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
 	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol) [▶ 1263]	Overloaded. Gets an observable sequence of Notification [▶ 1100]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(ISymbolCollection) [▶ 1264]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	WhenSymbolVersionChanges(ISchedule) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T. (String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T. (String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.5.2.1 AdsConnection.AddDeviceNotification Method

Overload List

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 467]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 468]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.1.1 **AdsConnection.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)**

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [▶ 652] event.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotification(
    string variableName,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

variableName	Type: System.String Name of the variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)
The notification handle.

Implements

[IAdsNotifications.AddDeviceNotification\(String, Int32, NotificationSettings, Object\)](#) [▶ 971]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [▶ 652] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [▶ 495] should always called when the notification is not used anymore.

6.2.5.2.1.2 **AdsConnection.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)
The notification handle.

Implements

[IAdsNotifications.AddDeviceNotification\(UInt32, UInt32, Int32, NotificationSettings, Object\) \[▶ 972\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	

Exception	Condition
ClientNotConnectedException [▶ 67]	

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 652](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 495](#)] should always called when the notification is not used anymore.

6.2.5.2.2 AdsConnection.AddDeviceNotificationAsync Method

Overload List

	Name	Description
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 470]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 471]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 652] event.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.2.2.1 **AdsConnection.AddDeviceNotificationAsync Method (String, Int32, NotificationSettings, Object, CancellationToken)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotification](#) [► 991] event.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationAsync (
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [► 1136].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [► 1136] type parameter contains the created handle (Handle) and the [ErrorCode](#) [► 1120] after execution.

Implements

[IAdsNotifications.AddDeviceNotificationAsync\(String, Int32, NotificationSettings, Object, CancellationToken\)](#) [► 974]

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [▶ 652] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [▶ 984] should always be called when the notification is not used anymore.

6.2.5.2.2 AdsConnection.AddDeviceNotificationAsync Method (UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotification](#) [▶ 652] event.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationAsync (
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
cancel	Type: System.Threading.CancellationTok The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [[▶ 1136](#)] type parameter contains the created handle (Handle) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsNotifications.AddDeviceNotificationAsync\(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken\)](#) [[▶ 975](#)]

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 652](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 495](#)] should always be called when the notification is not used anymore.

6.2.5.2.3 AdsConnection.AddDeviceNotificationEx Method**Overload List**

	Name	Description
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 473]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 474]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.

	Name	Description
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 475]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 654] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 476]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.

6.2.5.2.3.1 AdsConnection.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 654](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')

Return Value

Type: [UInt32](#)
The notification handle.

Implements

[IAdsNotifications.AddDeviceNotificationEx\(String, NotificationSettings, Object, Type\)](#) [[▶ 977](#)]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\) \[▶ 495\]](#) should always be called when the notification is not used anymore.

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx \[▶ 654\]](#) event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: System.Int32 . Additional arguments (for 'AnyType')

Return Value

Type: [UInt32](#)

The notification handle.

Implements

[IAdsNotifications.AddDeviceNotificationEx\(String, NotificationSettings, Object, Type, .Int32.\)](#) [▶ 977]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [▶ 495] should always called when the notification is not used anymore.

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [▶ 654] event.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')

Return ValueType: [UInt32](#)

The notification handle.

6.2.5.2.4.1 **AdsConnection.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, .Int32., CancellationTokent)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx](#) [\[▶ 654\]](#) event.

Namespace: [TwinCAT.Ads](#) [\[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationExAsync(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    CancellationTokent cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationTokent The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [\[▶ 1136\]](#).

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [\[▶ 1136\]](#) type parameter contains the created handle ([Handle](#) [\[▶ 1138\]](#)) and the [ErrorCode](#) [\[▶ 1120\]](#) after execution.

Implements

[IAdsNotifications.AddDeviceNotificationExAsync\(String, NotificationSettings, Object, Type, .Int32., CancellationToken\)](#) [[▶ 981](#)]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 495](#)] should always be called when the notification is not used anymore.

6.2.5.2.4.2 AdsConnection.AddDeviceNotificationExAsync Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 654](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> AddDeviceNotificationExAsync (
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings.

userData	Type: System.Object This object can be used to store user specific data.
type	Type: System.Type Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.
args	Type: .System.Int32 . Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [[▶ 1136](#)] type parameter contains the created handle (Handle) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Implements

[IAdsNotifications.AddDeviceNotificationExAsync\(UInt32, UInt32, NotificationSettings, Object, Type, .Int32, CancellationToken\)](#) [[▶ 982](#)]

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 495](#)] should always called when the notification is not used anymore.

6.2.5.2.5 **AdsConnection.CleanupSymbolTable Method**

Clears the internal symbol cache.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void CleanupSymbolTable()
```

Implements

[IAdsSymbolicAccess.CleanupSymbolTable.](#) [[▶ 10701](#)]

Remarks

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which which needs an extra ADS round trip.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Close()
```

Implements

[IConnection.Close.](#) [[▶ 83](#)]

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.7 **AdsConnection.Connect Method**

(Re)Connects the [IConnection](#) [[▶ 79](#)] when disconnected.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Connect()
```

Return Value

Type: [Boolean](#)

true if the [AdsConnection](#) [▶ 412] is reconnected, false otherwise.

Implements

[IConnection.Connect.](#) [▶ 84]

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2.8 AdsConnection.CreateSymbolLoader Method

Creates a new instance of the [Symbol loader](#) [▶ 1760] with the specified mode.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public IAdsSymbolLoader CreateSymbolLoader(
    ISession session,
    ISymbolLoaderSettings settings
)
```

Parameters

session	Type: TwinCAT.ISession [▶ 92] The session (for session orientated loads/symbols). Can be NULL if not present.
settings	Type: TwinCAT.ISymbolLoaderSettings [▶ 104] The settings.

Return Value

Type: [IAdsSymbolLoader](#) [▶ 1760]

The [IAdsSymbolLoader](#) [▶ 1760] interface of the Symbol loader.

Exceptions

Exception	Condition
ObjectDisposedException	
ObjectDisposedException	

Remarks

The Symbol Loader (V2) supports the following [modes](#) [▶ 159]. [Flat](#) [▶ 159]The flat mode organizes the Symbols in a flat list. At the beginning this List caches only the root symbol objects, which can be enumerated. To access the sub elements like structure fields or array elements use the [SubSymbols](#) [▶ 2696] collection. The property get accessor generates the subsymbols lazy on the fly (performance optimized) and stores them internally as weak reference (memory optimized). This mode is available in all .NET versions.[VirtualTree](#) [▶ 159]On top of the behaviour of the [Flat](#) [▶ 159], the virtual tree mode organizes the Symbols hierarchically with parent-child relationships. That eases the access to the hierarchical structure but

needs slightly more preprocessing of the data. This mode is available in all .NET Versions. [DynamicTree \[► 159\]](#) The Dynamic tree mode organizes the Symbols hierarchically and (dynamically) creates struct members, array elements and enum fields on the fly. 'Dynamically' means here not only lazy creation like in [Flat \[► 159\]](#), but furthermore real creation of type safe .NET complex types/instances as representatives of the TwinCAT Symbol objects/types. This feature is only available on platforms that support the Dynamic Language Runtime (DLR); actually all .NET Framework Version larger than 4.0. Virtual instances means, that all Symbols are ordered within a tree structure. For that symbol nodes that are not located on a fixed address, a Virtual Symbol will be created. Setting the virtualInstance parameter to 'false' means, that the located symbols will be returned in a flattened list.

Examples

The following sample shows how to create a dynamic version of the SymbolLoader V2. The dynamic symbol loader makes use of the Dynamic Language Runtime (DLR) of the .NET Framework. That means Structures, Arrays and Enumeration types and instances are generated 'on-the-fly' during symbol Browsing. These created dynamic objects are a one to one representation of the Symbol Server target objects (e.g the IEC61131 types on the PLC). Dynamic language features are only available from .NET4 upwards.

Dynamic Tree Mode

```

Console.WriteLine("Press [Enter] for leave:");
Console.ReadLine();
}

static object _notificationSynchronizer = new object();
static int _cycleCountEvents = 0;

/// <summary>
/// Handler function for the CycleCount ValueChanged event.
/// </summary>
/// <param name="sender">The sender.</param>
/// <param name="e">The e.</param>
static void cycleCount_ValueChanged(object sender, ValueChangedEventArgs e)
{
    lock(_notificationSynchronizer)
    {
        Interlocked.Increment(ref _cycleCountEvents);
        // val is a type safe value of int!
        dynamic val = e.Value;
        uint intVal = val;

        DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert UTC to local time
    }
}

```

```

        Console.WriteLine("CycleCount changed to: {0}, TimeStamp: {1}", intVal, changedTime.ToString(
("HH:mm:ss:fff"));
    }
}

static int _taskInfoEvents = 0;

/// <summary>
/// Handler function for the TaskInfo ValueChanged event.
/// </summary>
/// <param name="sender">The sender.</param>
/// <param name="e">The e.</param>
static void taskInfoValue_ValueChanged(object sender, ValueChangedEventArgs e)
{
    lock (_notificationSynchronizer)
    {
        Interlocked.Increment(ref _taskInfoEvents);
        dynamic val = e.Value;
        DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert to local time

        // Val is a during Runtime created struct type and contains
        // the same Properties as related PLC object.
        int cycleTime = val.CycleTime;
        Console.WriteLine("TaskInfoValue changed TimeStamp: {0}", changedTime.ToString("HH:mm:ss:fff"));
    }
}
}
}
}
}
}

```

The following sample shows how to create a static (non dynamic) version of the SymbolLoader V2. The static symbol loader in version 2 is a nearly code compatible version of the Dynamic Loader, only the dynamic creation of objects is not available. The reason for supporting this mode is that .NET Framework Versions lower than Version 4.0 (CLR2) doesn't support the Dynamic Language Runtime (DLR). The SymbolLoader V2 static object is supported from .NET 2.0 on.

Virtual Tree Mode

```

using System;
using System.Threading;
using System.Diagnostics;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;
using TwinCAT.Ads.ValueAccess;
using TwinCAT.Ads.TypeSystem;

namespace Sample
{
    class SymbolBrowserProgramV2VirtualTree
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args)
        {
            ConsoleLogger logger = new ConsoleLogger();

```

Examples

The following sample shows how to call (Remote Procedures / Methods) with Virtual Symbols

RPC Call in Virtual Mode

```

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
        }
    }
}

```

```

        // Get the Symbols (Dynamic Symbols)

        IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

        // Call a Method that has the following signature (within MAIN Program)
        /* {attribute 'TcRpcEnable'}
        METHOD PUBLIC M_Add : INT
        VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
        END_VAR
        */

        short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

        // Call a Method that has no parameter and returns VOID
        main.InvokeRpcMethod("M_Method1", new object[] {});

        //Browsing RpcMethods
        foreach(IRpcMethod method in main.RpcMethods)
        {
            string methodName = method.Name;

            foreach(IRpcMethodParameter parameter in method.Parameters)
            {
                string parameterName = parameter.Name;
                string parameterType = parameter.TypeName;
            }
        }
    }
}

```

Examples

The following sample shows how to call (Remote Procedures / Methods) with Dynamic Symbols.

RPC Call in Dynamic Mode

```

namespace Sample
{
    using System;
    using System.Diagnostics;
    using System.Threading;
    using TwinCAT;
    using TwinCAT.Ads;
    using TwinCAT.Ads.TypeSystem;
    using TwinCAT.Ads.ValueAccess;
    using TwinCAT.TypeSystem;
    using TwinCAT.TypeSystem.Generic;

    class RpcCallDynamicProgram
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            // Get the AdsAddress from command-line arguments
            AmsAddress address = ArgParser.Parse(args);
            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;

            using (AdsClient client = new AdsClient())
            {
                // Connect to the target device
                client.Connect(address);

                SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.DynamicTree);
                ISymbolLoader dynLoader = SymbolLoaderFactory.Create(client, settings);

                // Get the Symbols (Dynamic Symbols)

        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
    }
}
}
}
}
}

```

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

[TwinCAT.Ads.TypeSystem.SymbolLoaderFactory](#) [► 1923]

6.2.5.2.9 AdsConnection.CreateVariableHandle Method

Generates a unique handle for an ADS variable.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public uint CreateVariableHandle(
    string variableName
)

```

Parameters

variableName	Type: System.String Name of the ADS variable
--------------	---

Return Value

Type: [UInt32](#)

The handle of the ADS Variable.

Implements

[IAdsHandle.CreateVariableHandle\(String\)](#) [► 956]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.2.10 AdsConnection.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultHandle> CreateVariableHandleAsync(
    string variableName,
    CancellationToken cancel
)
```

Parameters

variableName	Type: System.String Name of the variable.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultHandle](#) [► 1136].

A task that represents the asynchronous 'CreateVariableHandle' operation. The [ResultHandle](#) [► 1136] parameter contains the variable handle ([Handle](#) [► 1138]) and the [ErrorCode](#) [► 1120] after execution.

Implements

[IAdsHandle.CreateVariableHandleAsync\(String, CancellationToken\)](#) [► 956]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [CreateVariableHandleAsync\(String, CancellationToken\)](#) is the [DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) [► 497]

Reference

[AdsConnection.CreateVariableHandle\(String\)](#) [[▶ 493](#)]

6.2.5.2.11 **AdsConnection.DeleteDeviceNotification Method**

Deletes an existing notification.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void DeleteDeviceNotification(
    uint notificationHandle
)
```

Parameters

notificationHandle	Type: System.UInt32 Handle of the notification.
--------------------	--

Implements

[IAdsNotifications.DeleteDeviceNotification\(UInt32\)](#) [[▶ 983](#)]

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.12 **AdsConnection.DeleteDeviceNotificationAsync Method**

Deletes a registered notification asynchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> DeleteDeviceNotificationAsync(
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [► 1116].

A task that represents the asynchronous 'DeleteDeviceNotification' operation. The [ErrorCode](#) [► 1120] property contains the ADS error code after execution.

Implements

[IAdsNotifications.DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [► 984]

Remarks

This is the complementary method to [AddDeviceNotificationAsync Overload](#) [► 973] overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

6.2.5.2.13 AdsConnection.DeleteVariableHandle Method

Releases the handle of a ADS variable again.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void DeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
----------------	---

Implements

[IAdsHandle.DeleteVariableHandle\(UInt32\)](#) [► 957]

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.2.14 AdsConnection.DeleteVariableHandleAsync Method

Releases the handle of a ADS variable again (asynchronously)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> DeleteVariableHandleAsync(
    uint variableHandle,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [[▶ 1116](#)].

A task that represents the asynchronous 'ReadState' operation. The [ResultAds](#) [[▶ 1116](#)] parameter contains the [ErrorCode](#) [[▶ 1120](#)] of the ADS communication after execution.

Implements

[IAdsHandle.DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) [[▶ 958](#)]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) [[▶ 958](#)] is the [CreateVariableHandleAsync\(String, CancellationToken\)](#) [[▶ 956](#)]

[AdsConnection.DeleteVariableHandle\(UInt32\)](#) [[▶ 496](#)]

6.2.5.2.15 **AdsConnection.Disconnect Method**

Disconnects this [IConnection](#) [[▶ 79](#)].

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool Disconnect()
```

Return Value

Type: [Boolean](#)

true if the [AdsConnection](#) [[▶ 412](#)] is disconnected, false if the connection was already disconnected.

Implements

[IConnection.Disconnect](#). [[▶ 84](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.16 **AdsConnection.Dispose Method**

Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void Dispose()
```

Implements

[IDisposable.Dispose](#).

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.17.1 AdsConnection.InvokeRpcMethod Method (String, String, .Object.)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Object? InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.

inParameters	Type: <u>System.Object</u> . The input parameters or NULL
--------------	--

Return Value

Type: [Object](#)

The return value of the Method (as object).

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[InvokeRpcMethod Overload](#) [[▶ 499](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.17.2 AdsConnection.InvokeRpcMethod Method (String, String, .Object., .Object.)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Object? InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object[]? outParameters
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object. The input parameters or NULL
outParameters	Type: .System.Object.. The output parameters.

Return Value

Type: [Object](#)

The return value of the Method (as object).

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [[▶ 2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.2.17.3 AdsConnection.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public Object? InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    out Object[]? outParameters
)

```

Parameters

symbolPath	Type: <u>System.String</u> The symbol path.
methodName	Type: <u>System.String</u> The method name.
inParameters	Type: <u>System.Object</u> . The parameters.
outSpecifiers	Type: <u>.TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]</u> . The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: <u>TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]</u> The ret specifier (specifying the return value) or NULL.
outParameters	Type: <u>System.Object</u> .. The out parameters.

Return Value

Type: Object
The return value of the Method (as object).

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{

6.2.5.2.17.4 AdsConnection.InvokeRpcMethod Method (String, String, .Object., AnyTypeSpecifier)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public Object? InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier? retSpecifier
)

```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] The ret specifier (specifying the return value) or NULL.

Return Value

Type: [Object](#)

The return value of the Method (as object).

Exceptions

Exception	Condition
<u>NotImplementedException</u>	

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters and retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (retSpecifier) is not necessary and should not be set.

Examples

    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    CancellationToken cancel
)

```

Parameters

symbolPath	Type: System.String The symbol/Instance path of the symbol.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] . The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The ret specifier (specifying the return value) or NULL.

cancel	Type: System.Threading.CancellationToken The cancellation token
--------	--

Return Value

Type: [Task.ResultRpcMethod](#) [▶ 1176].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [▶ 1176] results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. [ReturnValue](#) [▶ 1179] and the [ErrorCode](#) [▶ 1120] of the ADS communication after execution.

Implements

[IAdsRpcInvoke.InvokeRpcMethodAsync\(String, String, .Object, .AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken\)](#) [▶ 1022]

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach (IRpcMethod method in main.RpcMethods)
            {
```

```

        string methodName = method.Name;

        foreach(IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }
}

6.2.5.2.18.3 AdsConnection.InvokeRpcMethodAsync Method (IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    IRpcCallableInstance symbol,
    IRpcMethod method,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    CancellationToken cancel
)

```

Parameters

symbol	Type: TwinCAT.TypeSystem.IRpcCallableInstance [► 2606] The RPC callable symbol."
method	Type: TwinCAT.TypeSystem.IRpcMethod [► 2625] The method.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094]. The out specifiers.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] The ret specifier.
cancel	Type: System.Threading.CancellationToken The cancellation token

Return Value

Type: [Task.ResultRpcMethod](#) [► 1176].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [► 1176] results contains the return value together with the output parameters.

Remarks

Reference[AdsConnection Class](#) [► 412][ReadAny Overload](#) [► 516][TwinCAT.Ads Namespace](#) [► 179]**6.2.5.2.20.9 AdsConnection.ReadAny Method (UInt32, UInt32, Type, .Int32., Int32)**

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 Index group of the ADS variable.
indexOffset	Type: System.UInt32 Index offset of the ADS variable.
type	Type: System.Type Type of the object to be read.
args	Type: .System.Int32. Additional arguments.
timeout	Type: System.Int32 The timeout.

Return Value

Type: [Object](#)

The Value of the data marshalled to the specified type.

Implements

[IAdsReadWriteTimeoutAccess.ReadAny\(UInt32, UInt32, Type, .Int32., Int32\)](#) [► 1007]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [► 67]	

Remarks

If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args. The type is limited to Primitive types ('AnyType').

    uint indexOffset,
    Memory<byte> readBuffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
readBuffer	Type: System.Memory.Byte. The read buffer, memory area where the data is written.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultRead](#) [► 1143].

A task that represents the asynchronous read operation. The [ResultRead](#) [► 1143] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [► 1145]) and the [ErrorCode](#) [► 1120] after execution..

6.2.5.2.35.6 **AdsConnection.ReadWrite Method (UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32)**

Writes data synchronously to an ADS device and then Reads data from this device.

Namespace: [TwinCAT.Ads](#) [[▸ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int ReadWrite(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.

timeout	Type: System.Int32 The timeout.
---------	--

Return Value

Type: [Int32](#)
Number of successfully returned data bytes.

6.2.5.2.36.3 AdsConnection.ReadWriteAsync Method (UInt32, Memory.Byte., ReadOnlyMemory.Byte., CancellationToken)

ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultReadWrite> ReadWriteAsync(
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Variable handle.
readBuffer	Type: System.Memory.Byte. The read data / value
writeBuffer	Type: System.ReadOnlyMemory.Byte. The write data / value.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultReadWrite](#) [[▶ 1163](#)].

A task that represents the asynchronous 'ReadWrite' operation. The [ResultReadWrite](#) [[▶ 1163](#)] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [[▶ 1145](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

6.2.5.2.39 AdsConnection.TryAddDeviceNotification Method

Overload List

	Name	Description
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 567]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 568]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 652] event.

Reference

[AdsConnection Class \[▶ 412\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.2.39.1 AdsConnection.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification \[▶ 652\]](#) event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotification(
    string variableName,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    out uint handle
)
```

Parameters

variableName	Type: System.String Name of the variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data.
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode \[▶ 664\]](#)

The ADS ErrorCode.

Implements

[IAdsNotifications.TryAddDeviceNotification\(String, Int32, NotificationSettings, Object, UInt32.\) \[▶ 985\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 652](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 572](#)] should always be called when the notification is not used anymore.

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [[▶ 652](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    out uint handle
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
 The ADS error code.

Implements

[IAdsNotifications.TryAddDeviceNotification\(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.\)](#) [[▶ 986](#)]

Remarks

The
 dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 652](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)] should always called when the notification is not used anymore.

6.2.5.2.40.1 **AdsConnection.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32., UInt32.)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    out uint handle
)
```

Parameters

symbolPath	Type: System.String The symbol path..
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data.
type	Type: System.Type Type of the object stored in the event argument.
args	Type: .System.Int32. Additional arguments.
handle	Type: System.UInt32. The handle.

Return Value

Type: [AdsErrorCode](#) [► 664]

The handle of the notification.

Implements

[IAdsNotifications.TryAddDeviceNotificationEx\(String, NotificationSettings, Object, Type, .Int32., UInt32.\)](#) [► 988]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[TryAddDeviceNotificationEx Overload \[▶ 569\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.2.40.2 **AdsConnection.TryAddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)**

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx \[▶ 654\]](#) event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    out uint handle
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32. The 'AnyType' arguments.
handle	Type: System.UInt32. The notification handle.

Return Value

Type: [AdsErrorCode \[▶ 664\]](#)
The ADS Error code.

Implements

[IAdsNotifications.TryAddDeviceNotificationEx\(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.\) \[▶ 989\]](#)

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\) \[▶ 495\]](#) should always called when the notification is not used anymore.

[AdsConnection.DeleteVariableHandle\(UInt32\)](#) [[▶ 496](#)]

6.2.5.2.44 AdsConnection.TryInvokeRpcMethod Method**Overload List**

	Name	Description
	TryInvokeRpcMethod(String, String, Object, Object) [▶ 575]	Invokes the specified RPC Method
	TryInvokeRpcMethod(String, String, Object, Object, Object) [▶ 577]	Invokes the specified RPC Method

	Name	Description
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 580]	Invokes the rpc method.
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 578]	Invokes the rpc method.

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2.44.1 AdsConnection.TryInvokeRpcMethod Method (String, String, Object, Object.)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
retValue	Type: System.Object . The return value of the RPC method as object.

Return Value

Type: [AdsErrorCode](#) [▶ [664](#)]
The ADS Error Code.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, Object, Object.\)](#) [▶ [1026](#)]

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [▶ [2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] { (short) 3, (short) 4 });

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

[AdsConnection Class \[► 412\]](#)

[TryInvokeRpcMethod Overload \[► 574\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.2.44.2 **AdsConnection.TryInvokeRpcMethod Method (String, String, .Object., .Object., Object.)**

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object[]? outParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object. The parameters.
outParameters	Type: .System.Object.. The out parameters.
retValue	Type: System.Object. The return value of the RPC method as object.

Return Value

Type: [AdsErrorCode \[► 664\]](#)

The ADS Error Code.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, .Object., .Object., Object.\) \[► 1028\]](#)

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier \[► 2094\]](#) specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

```

Reference

[AdsConnection Class \[► 412\]](#)

[TryInvokeRpcMethod Overload \[► 574\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.2.44.3 **AdsConnection.TryInvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object., Object.)**

Invokes the rpc method.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    out Object[]? outParameters,
    out Object?? retValue
)
```

Parameters

symbolPath	Type: System.String The symbol.
methodName	Type: System.String Name of the method.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The ret specifier (specifying the return value) or NULL.
outParameters	Type: .System.Object . The out parameters.
retValue	Type: System.Object . The return value of the RPC method./>

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
AdsErrorCode.

Implements

[IAdsRpcInvoke.TryInvokeRpcMethod\(String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.. Object.\)](#) [[▶ 1030](#)]

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.49.1 AdsConnection.TryReadValue.T. Method (String, T.)

Reads the value of a symbol and returns the value as object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryReadValue<T>(
    string name,
    out T value
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
value	Type: T. The read value of the Symbol.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The [AdsErrorCode](#) [[▶ 664](#)].

Implements

[IAdsSymbolicAccess.TryReadValue.T.\(String, T.\)](#) [[▶ 1081](#)]

Remarks

The parameter type must have the same layout as the ADS symbol.

Reference

[TryReadValue Overload](#) [[▶ 591](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.49.2 AdsConnection.TryReadValue Method (ISymbol, Object.)

Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public AdsErrorCode TryReadValue(
    ISymbol symbol,
    out Object?? value
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol that should be read.
value	Type: System.Object . The value.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

Value of the symbol

Implements

[IAdsSymbolicAccess.TryReadValue\(ISymbol, Object.\)](#) [[▶ 1082](#)]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]	

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'. Structs are not supported.

Reference

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.5.2.49.3 AdsConnection.TryReadValue.T. Method (ISymbol, T.)

Reads the value of a symbol and returns it as an object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryReadValue<T>(
    ISymbol symbol,
    out T value
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol that should be read.
value	Type: T. The value.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS Error Code

Implements

[IAdsSymbolicAccess.TryReadValue.T.\(ISymbol, T.\)](#) [[▶ 1083](#)]

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

6.2.5.2.53 AdsConnection.TryWriteValue Method**Overload List**

	Name	Description
	TryWriteValue(ISymbol, Object) [► 612]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T.(ISymbol, T) [► 613]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [► 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T.(String, T) [► 611]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

6.2.5.2.53.1 **AdsConnection.TryWriteValue Method (String, Object)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryWriteValue (
    string name,
    Object value
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
value	Type: System.Object Object holding the value to be written to the ADS symbol

Return Value

Type: [AdsErrorCode \[▶ 664\]](#)

AdsErrorCode.

Implements

6.2.5.2.53.2 **AdsConnection.TryWriteValue.T. Method (String, T)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode TryWriteValue<T>(
    string name,
    T value
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
value	Type: T Object holding the value to be written to the ADS symbol

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
AdsErrorCode.

Implements

6.2.5.2.54 **AdsConnection.UnregisterAdsStateChangedAsync Method**

Registers for [AdsStateChanged \[► 655\]](#) events as an asynchronous operation.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultAds> UnregisterAdsStateChangedAsync (
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsStateChangedEventArgs [► 729] . The handler function to be unregistered.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds \[► 1116\]](#).

A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The [ResultAds \[► 1116\]](#) parameter contains the state the [ErrorCode \[► 1120\]](#) of the ADS communication after execution.

Implements

[IAdsStateProvider.UnregisterAdsStateChangedAsync\(EventHandler.AdsStateChangedEventArgs., CancellationToken\) \[► 1060\]](#)

[WriteAnyAsync Overload \[▶ 625\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.2.58.3 **AdsConnection.WriteAnyAsync Method (UInt32, UInt32, Object, CancellationToken)**

Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
value	Type: System.Object Object to write to the ADS device.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite \[▶ 1187\]](#).

A task that represents the asynchronous task operation. The result parameter [ResultWrite \[▶ 1187\]](#) of the write operation contains the [ErrorCode \[▶ 1120\]](#).

Implements

[IAdsAnyAccess.WriteAnyAsync\(UInt32, UInt32, Object, CancellationToken\) \[▶ 834\]](#)

Reference

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.2.58.4 **AdsConnection.WriteAnyAsync Method (UInt32, UInt32, Object, .Int32., CancellationToken)**

write any as an asynchronous operation.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[]? args,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
value	Type: System.Object Object to write to the ADS device.
args	Type: .System.Int32 . Additional arguments.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [[▶ 1187](#)].

A task that represents the asynchronous task operation. The result parameter [ResultWrite](#) [[▶ 1187](#)] of the write operation contains the [ErrorCode](#) [[▶ 1120](#)].

Implements

[IAdsAnyAccess.WriteAnyAsync\(UInt32, UInt32, Object, .Int32., CancellationToken\)](#) [[▶ 834](#)]

Exceptions

Exception	Condition
ObjectDisposedException	
ClientNotConnectedException [▶ 67]

6.2.5.2.59 AdsConnection.WriteAnyStringAsync Method

Overload List

	Name	Description
	WriteAnyStringAsync(String, String, Int32, Encoding, CancellationToken) [▶ 630]	write any string as an asynchronous operation.
	WriteAnyStringAsync(UInt32, String, Int32, Encoding, CancellationToken) [▶ 631]	write any string as an asynchronous operation.

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2.59.1 AdsConnection.WriteAnyStringAsync Method (String, String, Int32, Encoding, CancellationToken)

write any string as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteAnyStringAsync(
    string symbolPath,
    string value,
    int length,
    Encoding encoding,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol path.
value	Type: System.String The value.
length	Type: System.Int32 The length of the string to write
encoding	Type: System.Text.Encoding The encoding.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite \[▸ 1187\]](#).
Task<ResultWrite>.

Remarks

ATTENTION: Potentially this method is unsafe because following data can be overwritten after the string symbol. Please be sure to specify the string length lower than the string size reserved within the process image! The String is written with the specified encoding.

C#

```
public void WriteValue<T>(
    string name,
    T value
)
```

Parameters

name	Type: <u>System.String</u> Name of the ADS symbol.
value	Type: T Object holding the value to be written to the ADS symbol

Type Parameters

T	the value type.
---	-----------------

Implements

[IAdsSymbolicAccess.WriteValue.T.\(String, T\) \[► 1089\]](#)

Reference

[WriteValue Overload \[► 644\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.2.64.3 AdsConnection.WriteValue Method (ISymbol, Object)

Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void WriteValue(
    ISymbol symbol,
    Object val
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [► 2691] The symbol the value is written to.
val	Type: System.Object The value to write.

Implements

[IAdsSymbolicAccess.WriteValue\(ISymbol, Object\) \[► 1089\]](#)

Reference

[AdsConnection Class \[► 412\]](#)

[WriteValue Overload \[► 644\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.2.64.4 AdsConnection.WriteValue.T. Method (ISymbol, T)

Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public void WriteValue<T>(
    ISymbol symbol,
    T val
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol the value is written to.
val	Type: T The value to write.

Type Parameters

T	The value type.
---	-----------------

Implements

6.2.5.2.65 AdsConnection.WriteValueAsync Method

Overload List

	Name	Description
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 648]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 649]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 648]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Reference

[AdsConnection Class](#) [[▶ 412](#)]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2.65.1 **AdsConnection.WriteValueAsync.T. Method (String, T, CancellationToken)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteValueAsync<T>(
    string name,
    T value,
    CancellationToken cancel
)
```

Parameters

name	Type: System.String Name of the ADS symbol.
value	Type: T Object holding the value to be written to the ADS symbol
cancel	Type: System.Threading.CancellationToken The cancel token.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [Task.ResultWrite](#) [▶ 1187].

A task that represents the asynchronous 'WriteSymbol' operation. The [ResultWrite](#) [▶ 1187] parameter contains the [ErrorCode](#) [▶ 1120] after execution.

Implements

[IAdsSymbolicAccess.WriteValueAsync.T.\(String, T, CancellationToken\)](#) [▶ 1091]

Reference

[WriteValueAsync Overload](#) [▶ 647]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.2.65.2 **AdsConnection.WriteValueAsync Method (ISymbol, Object, CancellationToken)**

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteValueAsync(
    ISymbol symbol,
    Object val,
    CancellationToken cancel
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol the value is written to.
val	Type: System.Object The value to write.
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultWrite](#) [▶ 1187].

Task.

Implements

[IAdsSymbolicAccess.WriteValueAsync\(ISymbol, Object, CancellationToken\)](#) [▶ 1092]

Exceptions

6.2.5.2.65.3 AdsConnection.WriteValueAsync.T. Method (ISymbol, T, CancellationToken)

Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public Task<ResultWrite> WriteValueAsync<T>(
    ISymbol symbol,
    T val,
    CancellationToken cancel
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▸ 2691] The symbol the value is written to.
val	Type: T The value to write.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [Task.ResultWrite \[▸ 1187\]](#).

A task that represents the asynchronous 'WriteSymbol' operation. The [ResultWrite \[▸ 1187\]](#) parameter contains the [ErrorCode \[▸ 1120\]](#) after execution.

Implements

6.2.5.2.66 AdsConnection.RegisterSymbolVersionChanged Method

Registers the symbol version changed.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode RegisterSymbolVersionChanged(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler
)
```

Parameters

handler	Type: System.EventHandler.AdsSymbolVersionChangedEventArgs [▸ 739] . The handler function to register.
---------	---

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
 AdsErrorCode.

Implements

[IAdsSymbolChangedProvider.RegisterSymbolVersionChanged\(EventHandler.AdsSymbolVersionChangedEventArgs.\)](#) [[▶ 1064](#)]

Exceptions

Exception	Condition
ObjectDisposedException	

Reference

[AdsConnection Class](#) [[▶ 412](#)]

6.2.5.2.67 AdsConnection.UnregisterSymbolVersionChanged Method

Unregisters the symbol version changed.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsErrorCode UnregisterSymbolVersionChanged(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler
)
```

Parameters

handler	Type: System.EventHandler.AdsSymbolVersionChangedEventArgs [▶ 739]. The handler function to unregister.
---------	--

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
 AdsErrorCode.

Implements

[IAdsSymbolChangedProvider.UnregisterSymbolVersionChanged\(EventHandler.AdsSymbolVersionChangedEventArgs.\)](#) [[▶ 1064](#)]

Exceptions

Exception	Condition
ObjectDisposedException

6.2.5.3 AdsConnection Events

The [AdsConnection \[▶ 412\]](#) type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 652]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 654]	Occurs when a exception has occurred during notification management.
 	AdsNotificationEx [▶ 654]	Occurs when the ADS devices sends a notification to the client.
	AdsStateChanged [▶ 655]	Occurs when ADS State has been changed.
 	AdsSumNotification [▶ 656]	Occurs when Notifications are send (bundled notifications)
	AdsSymbolVersionC hanged [▶ 657]	Occurs when the symbol version has been changed.
 	ConnectionStateCha nged [▶ 658]	Occurs when connection status of the AdsConnection [▶ 412] has been changed.
	RouterStateChange d [▶ 659]	(Local) Router state changed event.

Reference

[AdsConnection Class \[▶ 412\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.3.1 AdsConnection.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationEventArgs> AdsNotification
```

Value

Type: [System.EventHandler.AdsNotificationEventArgs](#) [► 695].

Implements

[IAdsNotifications.AdsNotification](#) [► 991]

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

The Event Argument contains the raw data value of the notification, not marshalled to .NET types.

Examples

Example of receiving [AdsNotification](#) [► 991] events.

Trigger on changed values by ADS Notifications

```
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms

        //byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.5.3.2 **AdsConnection.AdsNotificationError Event**

Occurs when an exception has occurred during notification management.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError
```

Value

Type: [System.EventHandler.AdsNotificationErrorEventArgs \[► 694\]](#).

Implements

[IAdsNotifications.AdsNotificationError \[► 993\]](#)

Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the [AdsInvalidNotificationException \[► 690\]](#) which describes the invalid notification handle by its [Handle \[► 692\]](#) property.

Reference

[AdsConnection Class \[► 412\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

[TwinCAT.Ads.AdsInvalidNotificationException \[► 690\]](#)

[AdsConnection.AdsNotification \[► 652\]](#)

[AdsConnection.AdsNotificationEx \[► 654\]](#)

6.2.5.3.3 **AdsConnection.AdsNotificationEx Event**

Occurs when the ADS device sends a notification to the client.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

Value

Type: [System.EventHandler.AdsNotificationExEventArgs \[▶ 699\]](#).

Implements

[IAdsNotifications.AdsNotificationEx \[▶ 993\]](#)

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshallers.

Examples

Example of receiving [AdsNotificationEx \[▶ 993\]](#) events.

Trigger on changed values by ADS Notifications

```
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ...
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}
```

Reference

[AdsConnection Class \[▶ 412\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.5.3.4 AdsConnection.AdsStateChanged Event

Occurs when ADS State has been changed.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsStateChangedEventArgs> AdsStateChanged
```

Value

Type: [System.EventHandler.AdsStateChangedEventArgs \[▶ 729\]](#).

Implements

[IAdsStateProvider.AdsStateChanged](#) [► 1061]

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

This event occurs asynchronously if the synchronized flag is not set.

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.5.3.5 AdsConnection.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```

Value

Type: [System.EventHandler.AdsSumNotificationEventArgs](#).

Implements

[IAdsNotifications.AdsSumNotification](#) [► 994]

Exceptions

Exception	Condition
ObjectDisposedException	

Remarks

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The [AdsNotification](#) [► 991] and [AdsNotificationEx](#) [► 993] events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this [AdsSumNotification](#) [► 994] event. The full performance is reached only, when all notifications are handled on this event.

Examples

Example of receiving [AdsSumNotification](#) [► 994] events.

Trigger on changed values by ADS Notifications

```
private async Task RegisterSumNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsSumNotification += Client_SumNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms

        //byte[] notificationBuffer = new byte[sizeof(UInt32)];

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_SumNotification(object sender, AdsSumNotificationEventArgs e)
{
    // Timestamp of the Notification List
    DateTimeOffset dateTime = e.TimeStamp;

    // List of Raw ADS Notifications
    IList<Notification> notifications = e.Notifications;

    foreach(Notification notification in notifications)
    {
        // Notifications can be handled more efficiently, because they occur together
        // handler and can be transformed/
        synchronized in one step compared to AdsClient.AdsNotification events.
    }
}
```

Reference

[AdsConnection Class](#) [► 412]

[TwinCAT.Ads Namespace](#) [► 179]

[IAdsNotifications.AdsNotification](#) [► 991]

6.2.5.3.6 AdsConnection.AdsSymbolVersionChanged Event

Occurs when the symbol version has been changed.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AdsSymbolVersionChangedEventArgs> AdsSymbolVersionChanged
```

Value

Type: [System.EventHandler.AdsSymbolVersionChangedEventArgs](#) [▶ 739].

Implements

[IAdsSymbolChangedProvider.AdsSymbolVersionChanged](#) [▶ 1065]

Remarks

This is the case when the connected ADS server restarts. This invalidates all actual opened symbol handles. The SymbolVersion counter doesn't trigger, when an online change is made on the PLC (ports 801, ..., 851 ...)

Reference

[AdsConnection Class](#) [▶ 412]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.5.3.7 AdsConnection.ConnectionStateChanged Event

Occurs when connection status of the [AdsConnection](#) [▶ 412] has been changed.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: [System.EventHandler.ConnectionStateChangedEventArgs](#) [▶ 74].

Implements

[IConnectionStateProvider.ConnectionStateChanged](#) [▶ 91]

Remarks

The Connection state changes only if the [IConnection](#) [▶ 79] is established / shut down or active communication is triggered by the User of the [IConnection](#) [▶ 79] object.

Examples

The following sample shows how to keep the [ConnectionState](#) [▶ 438] updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
}
```

```

    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;

    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
}

```

[TwinCAT.Ads Namespace \[► 179\]](#)

[AdsConnection.ConnectionState \[► 438\]](#)

6.2.5.3.8 AdsConnection.RouterStateChanged Event

(Local) Router state changed event.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public event EventHandler<AmsRouterNotificationEventArgs> RouterStateChanged
```

Value

Type: [System.EventHandler.AmsRouterNotificationEventArgs \[► 798\]](#).

Remarks

This event indicates, that a changed event is received from the Local AmsRouter independant of the connected target address. A remote system RouterStateChanged event cannot be received at another system - it cannot traverse TwinCAT systems.

Array definition for a single dimension.

Inheritance Hierarchy

[System.Object](#)

TwinCAT.Ads.AdsDataTypeArrayInfo

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class AdsDataTypeArrayInfo
```

The [AdsDataTypeArrayInfo](#) type exposes the following members.

Properties

	Name	Description
	Elements [► 661]	Gets the number of elements.
	LowerBound [► 661]	Gets the lower bound.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	Marshal [► 662]	Marshals the content of the AdsDataTypeArrayInfo .
	MarshalSize [► 663]	Gets the marshal size of the AdsDataTypeArrayInfo .
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

The [AdsDataTypeArrayInfo](#) [► 660] type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	Marshal [► 662]	Marshals the content of the AdsDataTypeArrayInfo [► 660].
	MarshalSize [► 663]	Gets the marshal size of the AdsDataTypeArrayInfo [► 660].
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Reference

[AdsDataTypeArrayInfo Class](#) [► 660]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.6.2.1 AdsDataTypeArrayInfo.Marshal Method

Marshals the content of the [AdsDataTypeArrayInfo](#) [► 660].

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int Marshal(
    IStringMarshaler marshaler,
    Span<byte> buffer
)
```

Parameters

marshaler	Type: TwinCAT.TypeSystem.IStringMarshaler [► 2650] The marshaler.
buffer	Type: System.Span.Byte . The buffer.

Return Value

Type: [Int32](#)
System.Int32.

Reference

[AdsDataTypeArrayInfo Class](#) [► 660]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.6.2.2 AdsDataTypeArrayInfo.MarshalSize Method

Gets the marshal size of the [AdsDataTypeArrayInfo](#) [▶ 660].

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int MarshalSize(
    IStringMarshaler marshaler
)
```

Parameters

marshaler	Type: TwinCAT.TypeSystem.IStringMarshaler [▶ 2650] The symbol string marshaler
-----------	---

Return Value

Type: [Int32](#)
System.Int32.

Reference

6.2.7 AdsDataTypeId Enumeration

ADS data types.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AdsDataTypeId
```

Members

	Member name	Value	Description
	ADST_VOID	0	Empty Type (0)
	ADST_INT8	16	Integer 8 Bit (16)
	ADST_UINT8	17	Unsigned integer 8 Bit (17)
	ADST_INT16	2	Integer 16 Bit (2)
	ADST_UINT16	18	Unsigned integer 16 Bit (18)
	ADST_INT32	3	Integer 32 Bit (3)
	ADST_UINT32	19	Unsigned Integer 32 Bit (19)
	ADST_INT64	20	LONG Integer 64 Bit (20)
	ADST_UINT64	21	Unsigned Long integer 64 Bit (21)
	ADST_REAL32	4	Real (32 Bit) (4)

	Member name	Value	Description
	ADST_REAL64	5	Real 64 Bit (5)
	ADST_BIGTYPE	65	Blob (65)
	ADST_STRING	30	STRING (30)
	ADST_WSTRING	31	WSTRING (31)
	ADST_REAL80	32	ADS REAL80 (32)
	ADST_BIT	33	ADS BIT (33)
	ADST_VARIANT	12	ADS VARIANT (12)

6.2.8 AdsErrorCode Enumeration

ADS request return codes.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AdsErrorCode
```

Members

	Member name	Value	Description
	None	-1	None / Uninitialized. Category: Global This indicates an uninitialized value.
	NoError	0	No Error / Succeeded. Error code: 0 (0x000). Category: Global C++: ERR_NOERROR The ADS request succeeded.
	InternalError	1	Internal Error. Error code: 1 (0x001). Category: Global C++: ERR_INTERNAL This error is very generic and there is no further information available about the problem.
	NoRTime	2	No Realtime available. Error code: 2 (0x002). Category: Global C++: ERR_NORTIME
	LockedMemoryError	3	Allocation locked memory error. Error code: 3 (0x003). Category: Global C++: ERR_ALLOCLOCKEDMEM
	MailBoxError	4	Mailbox error.

	Member name	Value	Description
			Error code: 4 (0x004). Category: Global C++: ERR_INSERTMAILBOX The Mailbox is full – the ADS message could not be sent. Reducing the number of ADS messages per cycle may help.
	WrongHMsg	5	Wrong receive HMSG. Error code: 5 (0x005). Category: Global C++: ERR_WRONGRECEIVEHMSG
	TargetPortNotFound	6	The Target port is not found. Error code: 6 (0x006). Category: Global C++: ERR_TARGETPORTNOTFOUND The ADS server is not started or is not reachable. The target machine could be found, but the Port is not available.
	TargetMachineNotFound	7	The Target machine is not found. Error code: 7 (0x007). Category: Global C++: ERR_TARGETMACHINENOTFOUND The Target computer / AMS route was not found. This Error typically occurs when the Route is not registered at the requesting system.
	UnknownCommandID	8	Unknown command ID. Error code: 8 (0x008). Category: Global C++: ERR_UNKNOWNCMDID
	BadTaskID	9	Bad task ID. Error code: 9 (0x009). Category: Global C++: ERR_BADTASKID
	NoIO	10	No IO. Error code: 10 (0x00A). Category: Global C++: ERR_NOIO
	UnknownAmsCommand	11	Unknown AMS command. Error code: 11 (0x00B). Category: Global C++: ERR_UNKNOWNAMSCMD
	Win32Error	12	Win 32 error. Error code: 12 (0x00C). Category: Global

	Member name	Value	Description
			C++: ERR_WIN32ERROR
	PortNotConnected	13	The Port is not connected. Error code: 13 (0x00D). Category: Global C++: ERR_PORTNOTCONNECTED
	InvalidAmsLength	14	Invalid AMS length. Error code: 14 (0x00E). Category: Global C++: ERR_INVALIDAMSLength
	InvalidAmsNetID	15	Invalid AMS Net ID. Error code: 15 (0x00F). Category: Global C++: ERR_INVALIDAMSNETID
	LowInstallLevel	16	Low Installation level. Error code: 16 (0x010). Category: Global C++: ERR_LOWINSTLEVEL Installation level is too low – TwinCAT 2 license error.
	NoDebug	17	No debug available. Error code: 17 (0x011). Category: Global C++: ERR_NODEBUGINTAVAILABLE
	PortDisabled	18	Port disabled. Error code: 18 (0x012). Category: Global C++: ERR_PORTDISABLED The port is disabled when the TwinCAT system service not in an active state (config, running). For the time of a Reconfig/Restart the included TwinCAT Router disables all RouterPorts.
	PortConnected	19	The Port is already connected. Error code: 19 (0x013). Category: Global C++: ERR_PORTALREADYCONNECTED
	AmsSyncWin32Error	20	AMS Sync Win32 error. Error code: 20 (0x014). C++: ERR_AMSSYNC_W32ERROR
	SyncTimeOut	21	AMS Sync timeout. Error code: 21 (0x015). Category: Global C++: ERR_AMSSYNC_TIMEOUT
	AmsSyncAmsError	22	AMS Sync AMS error Error code: 22 (0x016).

	Member name	Value	Description
			Category: Global C++: ERR_AMSSYNC_AMSERROR
	AmsSyncNoIndexMap	23	No index map for AMS Sync available. Error code: 23 (0x017). Category: Global C++: ERR_AMSSYNC_NOINDEXINMAP
	InvalidAmsPort	24	Invalid AMS port. Error code: 24 (0x018). Category: Global C++: ERR_INVALIDAMSPORT
	NoMemory	25	No memory. Error code: 25 (0x019). Category: Global C++: ERR_NOMEMORY
	TCPSendError	26	TCP send error. Error code: 26 (0x01A). Category: Global C++: ERR_TCPSEND
	HostUnreachable	27	The Host is unreachable. Error code: 27 (0x1B). Category: Global C++: , ERR_HOSTUNREACHABLE
	AmsInvalidFragment	28	Invalid AMS fragment. Error code: 28 (0x1C). Category: Global C++: ERR_INVALIDAMSFAGMENT
	TlsSendError	29	TLS send error – secure ADS connection failed. Error code: 29 (0x1D) Category: Global C++: ERR_TLSEND
	AccessDenied	30	Access denied – secure ADS access denied. Error code: 30 (0x1E) Category: Global C++: ERR_ACCESSDENIED
	TcpConnectionRefused	31	TCP Connection refused Error code: 31 (0x1F) Category: Global C++: ERR_TCP_CONN_REFUSED
	NoLockedMemory	1280	Router: no locked memory. Error code: 1280 (0x500). Category: Router

	Member name	Value	Description
			C++: ROUTERERR_NOLOCKEDMEMORY Locked memory cannot be allocated.
	ResizeMemory	1281	Router: The size of the router memory could not be changed. Error code: 1281 (0x501). Category: Router C++: ROUTERERR_RESIZEMEMORY The router memory size could not be changed.
	MailboxFull	1282	Router: mailbox full. Error code: 1282 (0x502). Category: Router C++: ROUTERERR_MAILBOXFULL The mailbox has reached the maximum number of possible messages.
	DebugBoxFull	1283	Router: The mailbox has reached the maximum number of possible messages. Error code: 1284 (0x504). Category: Router C++: ROUTERERR_DEBUGBOXFULL The Debug mailbox has reached the maximum number of possible messages.
	UnknownPortType	1284	Router: Unknown Port Type Error code: 1284 (0x504). Category: Router C++: ROUTERERR_UNKNOWNPORTTYPE The port type is unknown.
	RouterNotInitialized	1285	Router: Router is not initialized. Error code: 1285 (0x505). Category: Router C++: ROUTERERR_NOTINITIALIZED The router is not initialized.
	PortAlreadyInUse	1286	Router: The desired port number is already assigned. Error code: 1286 (0x506). Category: Router C++: ROUTERERR_PORTALREADYINUSE The port number is already assigned.

	Member name	Value	Description
	PortNotRegistered	1287	Router: Port not registered. Error code: 1287 (0x507). Category: Router C++: ROUTERERR_NOTREGISTERED The port is not registered.
	NoMoreQueues	1288	Router: The maximum number of Ports reached. Error code: 1288 (0x508). Category: Router C++: ROUTERERR_NOMOREQUEUES The maximum number of ports has been reached.
	InvalidPort	1289	Router: The port is invalid. Error code: 1289 (0x509). Category: Router C++: ROUTERERR_INVALIDPORT The port is invalid.
	RouterNotActive	1290	Router: TwinCAT Router not active. Error code: 1290 (0x50A). Category: Router C++: ROUTERERR_NOTACTIVATED The router is not active.
	RouterFragmentBoxFull	1291	Router: The mailbox has reached the maximum number for fragmented messages. Error code: 1291 (0x50B). Category: Router C++: ROUTERERR_FRAGMENTBOXFULL The mailbox has reached the maximum number for fragmented messages.
	RouterFragmentTimeout	1292	Router: A fragment timeout has occurred. Error code: 1292 (0x50C). Category: Router C++: ROUTERERR_FRAGMENTTIMEOUT A fragment timeout has occurred.
	RouterPortToBeRemoved	1293	Router: The port is removed.. Error code: 1293 (0x50D). Category: Router C++: ROUTERERR_TOBEREMOVED

	Member name	Value	Description
			The port is removed..
	DeviceError	1792	error class <device error"> Error code: 1792 (0x700). Category: Device C++: ADSERR_DEVICE_ERROR
	DeviceServiceNotSupported	1793	The requested Service is not supported by the server. Error code: 1793 (0x701). Category: Device C++: ADSERR_DEVICE_SRVNOTSUPP This will be returned for example when an not known IndexGroup or IndexOffset is accessed.
	DeviceInvalidGroup	1794	Invalid index group. Error code: 1794 (0x702). Category: Device C++: ADSERR_DEVICE_INVALIDGRP
	DeviceInvalidOffset	1795	Invalid index offset. Error code: 1795 (0x703). Category: Device C++: ADSERR_DEVICE_INVALIDOFFSE T
	DeviceInvalidAccess	1796	Reading/writing not permitted. Error code: 1796 (0x704). Category: Device C++: ADSERR_DEVICE_INVALIDACCES S
	DeviceInvalidSize	1797	Parameter size not correct. Error code: 1797 (0x705). Category: Device C++: ADSERR_DEVICE_INVALIDSIZE Usually the size of the requested return data (by Read or ReadWrite-request) doesn't have the correct size and doesn't fit in the reserved read memory buffer.
	DeviceInvalidData	1798	Invalid parameter value(s). Error code: 1798 (0x706). Category: Device C++: ADSERR_DEVICE_INVALIDDATA
	DeviceNotReady	1799	Device is not in a ready state. Error code: 1799 (0x707). Category: Device

	Member name	Value	Description
			C++: ADSERR_DEVICE_NOTREADY
	DeviceBusy	1800	Device is busy. Error code: 1800 (0x708). Category: Device C++: ADSERR_DEVICE_BUSY This return code indicates that the addressed (ADS) device is actually busy. Try the request later on again.
	DeviceInvalidContext	1801	Invalid context (must be in Windows). Error code: 1801 (0x709). Category: Device C++: ADSERR_DEVICE_INVALIDCONTE XT
	DeviceNoMemory	1802	The device ran out of memory. Error code: 1802 (0x70a). Category: Device C++: ADSERR_DEVICE_NOMEMORY
	DeviceInvalidParam	1803	Invalid parameter value(s). Error code: 1803 (0x70b). Category: Device C++: ADSERR_DEVICE_INVALIDPARM
	DeviceNotFound	1804	Not found(files, ...). Error code: 1804 (0x70c). Category: Device C++: ADSERR_DEVICE_NOTFOUND
	DeviceSyntaxError	1805	Syntax error in command or file. Error code: 1805 (0x70d). Category: Device C++: ADSERR_DEVICE_SYNTAX
	DeviceIncompatible	1806	Objects do not match. Error code: 1806 (0x70e). Category: Device C++: ADSERR_DEVICE_INCOMPATIBLE
	DeviceExists	1807	Object already exists on device. Error code: 1807 (0x70f). Category: Device C++: ADSERR_DEVICE_EXISTS
	DeviceSymbolNotFound	1808	Symbol not found. Error code: 1808 (0x7010). Category: Device C++: ADSERR_DEVICE_SYMBOLNOTF OUND

	Member name	Value	Description
			The requested Symbol - usually requested by instance path - is not found or not existent.
	DeviceSymbolVersionInvalid	1809	Symbol version is invalid. Error code: 1809 (0x711). Category: Device C++: ADSERR_DEVICE_SYMBOLVERSIONINVALID This ErrorCode can indicate that a variable handle is invalid.
	DeviceInvalidState	1810	Server is not in a valid state. Error code: 1810 (0x712). Category: Device C++: ADSERR_DEVICE_INVALIDSTATE
	DeviceTransModeNotSupported	1811	ADS transmode is not supported. Error code: 1811 (0x713). Category: Device C++: ADSERR_DEVICE_TRANSMODENOTSUPP
	DeviceNotifyHandleInvalid	1812	Notification handle is invalid. Error code: 1812 (0x714). Category: Device C++: ADSERR_DEVICE_NOTIFYHANDINVALID
	DeviceClientUnknown	1813	Notification client not registered. Error code: 1813 (0x715). Category: Device C++: ADSERR_DEVICE_CLIENTUNKNOWN
	DeviceNoMoreHandles	1814	No more notification handles. Error code: 1814 (0x716). Category: Device C++: ADSERR_DEVICE_NOMOREHDLS
	DeviceInvalidWatchsize	1815	Size for watch to big. Error code: 1815 (0x717). Category: Device C++: ADSERR_DEVICE_INVALIDWATCHSIZE
	DeviceNotInitialized	1816	Device is not initialized. Error code: 1816 (0x718). Category: Device C++: ADSERR_DEVICE_NOTINIT
	DeviceTimeOut	1817	Device has a timeout.

	Member name	Value	Description
			Error code: 1817 (0x719). Category: Device C++: ADSERR_DEVICE_TIMEOUT
	DeviceNoInterface	1818	Query interface has failed. Error code: 1818 (0x71A). Category: Device C++: ADSERR_DEVICE_NOINTERFACE
	DeviceInvalidInterface	1819	Wrong interface required. Error code: 1819 (0x71B). Category: Device C++: ADSERR_DEVICE_INVALIDINTERF ACE
	DeviceInvalidCLSID	1820	Class ID is invalid. Error code: 1820 (0x71C). Category: Device C++: ADSERR_DEVICE_INVALIDCLSID
	DeviceInvalidObjectID	1821	Object ID is invalid. Category: Device Error code: 1821 (0x71D). C++: ADSERR_DEVICE_INVALIDOBJID
	DeviceRequestIsPending	1822	Device: A Request is Pending. Error code: 1822 (0x71E). Category: Device C++: ADSERR_DEVICE_PENDING This return code indicates that the result of an request is not available yet. Try later to access the request result.
	DeviceRequestIsAborted	1823	Device: Request is Aborted. Category: Device Error code: 1823 (0x71F). C++: ADSERR_DEVICE_ABORTED
	DeviceSignalWarning	1824	Device: Signal warning. Error code: 1824 (0x720). Category: Device C++: ADSERR_DEVICE_WARNING
	DeviceInvalidArrayIndex	1825	Device: Invalid Array Index (ADSERR_DEVICE_INVALIDARRAYIDX) Error code: 1825 (0x721). Category: Device C++: ADSERR_DEVICE_INVALIDARRAY IDX
	DeviceSymbolNotActive	1826	Device: Symbol not Active

	Member name	Value	Description
			Error code: 1826 (0x722). Category: Device C++: ADSERR_DEVICE_SYMBOLNOTACTIVE
	DeviceAccessDenied	1827	Device: Access denied. Error code: 1827 (0x723). Category: Device C++: ADSERR_DEVICE_ACCESSDENIED
	DeviceLicenseNotFound	1828	Device: license not found Error code: 1828 (0x724). Category: Device C++: ADSERR_DEVICE_LICENSENOTFOUND
	DeviceLicenseExpired	1829	Device: license expired Error code: 1829 (0x725). Category: Device C++: ADSERR_DEVICE_LICENSEEXPIRED
	DeviceLicenseExceeded	1830	Device: license exceeded Error code: 1830 (0x726). Category: Device C++: ADSERR_DEVICE_LICENSEEXCEEDED
	DeviceLicenseInvalid	1831	Device: license invalid Error code: 1831 (0x727). Category: Device C++: ADSERR_DEVICE_LICENSEINVALID
	DeviceLicenseSystemId	1832	Device: license invalid system id Error code: 1832 (0x728). Category: Device C++: ADSERR_DEVICE_LICENSESYSTEMID
	DeviceLicenseNoTimeLimit	1833	Device: license not time limited Error code: 1833 (0x729). Category: Device C++: ADSERR_DEVICE_LICENSENOTIMELIMIT
	DeviceLicenseFutureIssue	1834	Device: license issue time in the future Error code: 1834 (0x72A).

	Member name	Value	Description
			Category: Device C++: ADSERR_DEVICE_LICENSEFUTUREISSUE
	DeviceLicenseTimeToLong	1835	Device: license time period to long Error code: 1835 (0x72B). Category: Device C++: ADSERR_DEVICE_LICENSETIMETO LONG
	DeviceException	1836	Device: Exception in device specific code Error code: 1836 (0x72C). Category: Device C++: ADSERR_DEVICE_EXCEPTION
	DeviceLicenseDuplicated	1837	Device: License file read twice Error code: 1837 (0x72D). Category: Device C++: ADSERR_DEVICE_LICENSEDUPLICATED
	DeviceSignatureInvalid	1838	Device: invalid signature Error code: 1838 (0x72E). Category: Device C++: ADSERR_DEVICE_SIGNATUREINVALID
	DeviceCertificateInvalid	1839	Device: public key certificate Error code: 1839 (0x72F). Category: Device C++: ADSERR_DEVICE_CERTIFICATEINVALID
	DeviceLicenseOemNotFound	1840	Device: public key of OEM unknown Error code: 1840 (0x730). Category: Device C++: ADSERR_DEVICE_LICENSEOEMNOTFOUND
	DeviceLicenseRestricted	1841	Device: license not valid for this system id type Error code: 1841 (0x731). Category: Device C++: ADSERR_DEVICE_LICENSERESTRICTED
	DeviceLicenseDemoDenied	1842	Device: trial license denied Error code: 1842 (0x732). Category: Device

	Member name	Value	Description
			C++: ADSERR_DEVICE_LICENSEDEMO DENIED
	DeviceInvalidFunctionId	1843	Device: function id is invalid Error code: 1843 (0x733). Category: Device C++: ADSERR_DEVICE_INVALIDFNCID
	DeviceOutOfRange	1844	Device: a parameter, an index, an iterator, ... is out of range Error code: 1844 (0x734). Category: Device C++: ADSERR_DEVICE_OUTOFRANGE
	DeviceInvalidAlignment	1845	Device: invalid alignment Error code: 1845 (0x735). Category: Device C++: ADSERR_DEVICE_INVALIDALIGN MENT
	DeviceLicensePlatform	1846	Device: license invalid platform level Error code: 1846 (0x736). Category: Device C++: ADSERR_DEVICE_LICENSEPLATF ORM
	DeviceContextForwardPassive Level	1847	Device: wrong context - forward to passive level (port 12) Error code: 1847 (0x737). Category: Device C++: ADSERR_DEVICE_FORWARD_PL
	DeviceContextForwardDispatch Level	1848	Device: wrong context - forward to dispatch level (port 10) Error code: 1848 (0x738). Category: Device C++: ADSERR_DEVICE_FORWARD_DL
	DeviceContextForwardRealTim e	1849	Device: wrong context - forward to real time (port 11) Error code: 1849 (0x739). Category: Device C++: ADSERR_DEVICE_FORWARD_RT
	DeviceCertificateEntrust	1850	Device: OEM certificate not in trusted list Error code: 1850 (0x73A). Category: Device

	Member name	Value	Description
			C++: ADSERR_DEVICE_CERTIFICATEN TRUST
	ClientError	1856	Error class <client error> Error code: 1856 (0x740). Category: Client C++: ADSERR_CLIENT_ERROR
	ClientInvalidParameter	1857	Parameter at service is invalid. Error code: 1857 (0x741). Category: Client C++: ADSERR_CLIENT_INVALIDPARM
	ClientListEmpty	1858	Polling list is empty. Error code: 1858 (0x742). Category: Client C++: ADSERR_CLIENT_LISTEMPTY
	ClientVariableInUse	1859	Variable connection is already in use. Error code: 1859 (0x743). Category: Client C++: ADSERR_CLIENT_VARUSED
	ClientDuplicateInvokeID	1860	Invoke ID already in use. Error code: 1860 (0x744). Category: Client C++: ADSERR_CLIENT_DUPLINVOKEID
	ClientSyncTimeOut	1861	Timeout has elapsed. Error code: 1861 (0x745). Category: Client C++: ADSERR_CLIENT_SYNCTIMEOUT This error occurs when the communication endpoint don't answer within the configured timeout timespan. The most likely reasons for this return code is a not available client (system shutdown), network problems or a busy device that runs the client.
	ClientW32Error	1862	Error in win32 subsystem. Category: Client Error code: 1862 (0x746). C++: ADSERR_CLIENT_W32ERROR
	ClientTimeoutInvalid	1863	Timeout value is invalid. Error code: 1863 (0x747). Category: Client C++: ADSERR_CLIENT_TIMEOUTINVALI D

	Member name	Value	Description
	ClientPortNotOpen	1864	ADS port is not opened. Error code: 1864 (0x748). Category: Client C++: ADSERR_CLIENT_PORTNOTOPEN
	ClientNoAmsAddr	1865	No AMS Address. Error code: 1865 (0x749). Category: Client C++: ADSERR_CLIENT_NOAMSADDR
	ClientSyncInternal	1872	An internal in ADS sync has occurred. Error code: 1872 (0x750). Category: Client C++: ADSERR_CLIENT_SYNCINTERNAL
	ClientAddHash	1873	Hash table overflow. Error code: 1873(0x751). Category: Client C++: ADSERR_CLIENT_ADDHASH
	ClientRemoveHash	1874	There are no more symbols in the hash table. Error code: 1874 (0x752). Category: Client C++: ADSERR_CLIENT_REMOVEHASH
	ClientNoMoreSymbols	1875	There are no more symbols in cache. Error code: 1875 (0x753). Category: Client C++: ADSERR_CLIENT_NOMORESYP
	ClientResponseInvalid	1876	An invalid response has been received. Error code: 1876 (0x754). Category: Client C++ ADSERR_CLIENT_SYNCRESINVAL ID This error occurs when the client receives invalid response frame for an ADS request. The frame is ignored and this error code is returned to the caller.
	ClientPortLocked	1877	The synchronous ADS Port is locked. Error code: 1877 (0x755). Category: Client C++: ADSERR_CLIENT_SYNCPORTLOCKED

	Member name	Value	Description
	ClientRequestCancelled	1878	<p>The client Request was cancelled (asynchronously)</p> <p>Error code: 1878 (0x756).</p> <p>Category: Client</p> <p>C++: ADSERR_CLIENT_REQCANCEL</p>
	ClientQueueFull	32768	<p>The ADS Client queue is full</p> <p>Error code: 32768 (0x8000).</p> <p>Category: Client</p> <p>C++: ADSERR_CLIENT_SYNCPORTLOCKED</p>
	WSA_ConnAborted	10053	<p>Software caused connection abort (0x2745, 10053)</p> <p>An established connection was aborted by the software in your host computer, possibly due to a data transmission time-out or protocol error.</p> <p>Error code: 10053 (0x2745).</p> <p>Category: Windows Sockets</p> <p>C++: WSAECONNABORTED</p>
	WSA_ConnReset	10054	<p>Connection reset by peer. (0x2746, 10054)</p> <p>An existing connection was forcibly closed by the remote host. This normally results if the peer application on the remote host is suddenly stopped, the host is rebooted, the host or remote network interface is disabled, or the remote host uses a hard close (see setsockopt for more information on the SO_LINGER option on the remote socket). This error may also result if a connection was broken due to keep-alive activity detecting a failure while one or more operations are in progress. Operations that were in progress fail with WSAENETRESET. Subsequent operations fail with WSAECONNRESET.</p> <p>Error code: 10054 (0x2746).</p> <p>Category: Windows Sockets</p> <p>C++: WSAECONNRESET</p>
	WSA_ConnRefused	10061	<p>Windows sockets connection refused (0x274d, 10061)</p> <p>No connection could be made because the target computer actively refused it. This usually results from trying to connect to a service that is inactive on the foreign host—that is, one with no server application running.</p>

	Member name	Value	Description
			Error code: 10061 (0x274d). Category: Windows Sockets C++: WSAECONNREFUSED

Remarks

These ADS Error codes are used within the AmsHeader to indicate ReturnCodes or Error states in ADS Request Responses. For example the NoError (value 0) indicates a success. Further codes like TargetPortNotFound (the ADSServer port is not found) or ClientSyncTimeOut (the client request wasn't answered within the configured global timeout) indicate communication errors. Also ApplicationReturn codes (e.g. ClientNoMoreSymbols (the end of the Server Symbols list is reached) are encoded in this AdsErrorCode.

For more information please see the [AMS Header structure](#) described on the Beckhoff Information System.

6.2.9 AdsErrorCodeExtensions Class

Class AdsErrorCodeExtensions.

Inheritance Hierarchy

[System.Object](#)

TwinCAT.Ads.AdsErrorCodeExtensions

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static class AdsErrorCodeExtensions
```

The AdsErrorCodeExtensions type exposes the following members.

Methods

	Name	Description
	Failed [► 681]	Indicates, that the communication failed with AdsErrorCode [► 664].
	Succeeded [► 681]	Indicates, that the communication / AdsErrorCode [► 664] doesn't show an error.

Remarks

This class extends the [AdsErrorCode](#) [► 664] by [Succeeded\(AdsErrorCode\)](#) [► 681] and [Failed\(AdsErrorCode\)](#) [► 681] methods.

Reference

[TwinCAT.Ads Namespace](#) [► 179]

6.2.9.1 AdsErrorCodeExtensions Methods

The [AdsErrorCodeExtensions](#) [▶ 680] type exposes the following members.

Methods

	Name	Description
	Failed [▶ 681]	Indicates, that the communication failed with AdsErrorCode [▶ 664].
		
	Succeeded [▶ 681]	Indicates, that the communication / AdsErrorCode [▶ 664] doesn't show an error.
		

Reference

[AdsErrorCodeExtensions Class](#) [▶ 680]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.9.1.1 AdsErrorCodeExtensions.Failed Method

Indicates, that the communication failed with [AdsErrorCode](#) [▶ 664].

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool Failed(
    this AdsErrorCode errorCode
)
```

Parameters

errorCode	Type: TwinCAT.Ads.AdsErrorCode [▶ 664] The error code.
-----------	---

Return Value

Type: [Boolean](#)

true if the [AdsErrorCode](#) [▶ 664] indicates an Error/Failure, false otherwise.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [AdsErrorCode](#) [▶ 664]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Reference

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.9.1.2 AdsErrorCodeExtensions.Succeeded Method

Indicates, that the communication / [AdsErrorCode](#) [▶ 664] doesn't show an error.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool Succeeded(
    this AdsErrorCode errorCode
)
```

Parameters

errorCode	Type: TwinCAT.Ads.AdsErrorCode [▶ 664] The error code.
-----------	---

Return Value

Type: [Boolean](#)

true if the [AdsErrorCode](#) [[▶ 664](#)] is [NoError](#) [[▶ 664](#)], false otherwise.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [AdsErrorCode](#) [[▶ 664](#)]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

[System.Exception](#)

[TwinCAT.AdsException](#) [[▶ 61](#)]

[TwinCAT.Ads.AdsErrorException](#)

[TwinCAT.Ads.AdsSumCommandException](#) [[▶ 735](#)]

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
[SerializableAttribute]
public class AdsErrorException : AdsException
```

The AdsErrorException type exposes the following members.

Constructors

	Name	Description
	AdsErrorException [▶ 684]	Initializes a new Instance of the AdsErrorException class.

	Name	Description
	AdsErrorException(SerializationInfo, StreamingContext) [▶ 685]	Initializes a new instance of the AdsErrorException class.
	AdsErrorException(String, AdsErrorCode) [▶ 685]	Initializes a new Instance of the AdsErrorException class.

Properties

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception .)
	ErrorCode [▶ 686]	Gets the error code of the Exception.
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception .)
	HResult	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception .)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception .)
	Message	Gets a message that describes the current exception. (Inherited from Exception .)
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception .)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception .)
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception .)

Methods

	Name	Description
 	Create(AdsErrorCode) [▶ 688]	Creates the AdsErrorException
 	Create(String, AdsErrorCode) [▶ 688]	Creates the AdsErrorException
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetObjectData [▶ 689]	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides Exception.GetObjectData(SerializationInfo, StreamingContext) .)

	Name	Description
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

Events

	Name	Description
	SerializeObjectState	Obsolete. Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception .)

public ReadOnlyMemory<byte> Data { get; }
```

Property Value

Type: [ReadOnlyMemory.Byte](#).

Implements

[INotification.Data](#) [[▶ 1097](#)]

Remarks

This Memory object can be seen as binary 'View' to the value object. It represents exactly the data that corresponds to the [Handle](#) [[▶ 697](#)].

Reference

[AdsNotificationEventArgs Class](#) [[▶ 695](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.13.1.2 AdsNotificationEventArgs.Handle Property

Gets the Notification handle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public uint Handle { get; }
```

Property Value

Type: [UInt32](#)

Implements

[INotification.Handle](#) [[▶ 1097](#)]

Remarks

The Notification Handle is the handle that is created during ADS Notification registration ([AddDeviceNotificationAsync Overload](#) [[▶ 973](#)], [AddDeviceNotification Overload](#) [[▶ 971](#)]) and used for deregistration ([DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 984](#)], [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 984](#)]).

6.2.13.2 AdsNotificationEventArgs Methods

The [AdsNotificationEventArgs \[▶ 695\]](#) type exposes the following members.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

AdsSession class

Inheritance Hierarchy

- [System.Object](#)
- [TwinCAT.Session \[▶ 107\]](#)
- [TwinCAT.Ads.AdsSessionBase \[▶ 716\]](#)
- TwinCAT.Ads.AdsSession

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class AdsSession : AdsSessionBase
```

The AdsSession type exposes the following members.

Constructors

	Name	Description
	AdsSession(AmsAddress) [▶ 708]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsAddress, ILogger) [▶ 711]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsAddress, SessionSettings) [▶ 709]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsNetId, Int32) [▶ 709]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsAddress, SessionSettings, ILogger) [▶ 711]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsAddress, SessionSettings, Object) [▶ 710]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsNetId, Int32, ILogger) [▶ 712]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsNetId, Int32, SessionSettings) [▶ 710]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsAddress, SessionSettings, ILogger, Object) [▶ 712]	Initializes a new instance of the AdsSession class.
	AdsSession(AmsNetId, Int32, SessionSettings, ILogger) [▶ 713]	Initializes a new instance of the AdsSession class.

Properties

	Name	Description
	Address [▶ 720]	Gets the target address of the AdsSessionBase [▶ 716] (Inherited from AdsSessionBase [▶ 716].)

	Name	Description
	AddressSpecifier [▶ 109]	Gets the communication endpoint address string representation. (Inherited from Session [▶ 107].)
	Connection [▶ 720]	Gets the connection. (Inherited from AdsSessionBase [▶ 716].)
 	ConnectionState [▶ 110]	Gets the current Connection state of the Session [▶ 107] (Inherited from Session [▶ 107].)
	Disposed [▶ 111]	Gets a value indicating whether this Session [▶ 107] is disposed. (Inherited from Session [▶ 107].)
	EstablishedAt [▶ 112]	Gets the UTC time when the session was established. (Inherited from Session [▶ 107].)
	Id [▶ 112]	Gets the Session Identifier (Inherited from Session [▶ 107].)
	IsConnected [▶ 113]	Gets a value indicating whether this instance is connected. (Inherited from Session [▶ 107].)
	Logger [▶ 723]	Gets the logger interface or null. (Inherited from AdsSessionBase [▶ 716].)
	Name [▶ 113]	Gets the name of the session (Inherited from Session [▶ 107].)
	NetId [▶ 721]	Gets the NetId of the Session (Inherited from AdsSessionBase [▶ 716].)
	Owner [▶ 721]	Gets the Session owner. (Inherited from AdsSessionBase [▶ 716].)
	Port [▶ 722]	Gets the Ams Port of the Session (Inherited from AdsSessionBase [▶ 716].)
	Settings [▶ 722]	Gets the settings of the Session/Connection. (Inherited from AdsSessionBase [▶ 716].)
	Statistics [▶ 722]	Gets the Communication / Session statistics. (Inherited from AdsSessionBase [▶ 716].)
	SymbolServer [▶ 113]	Gets the symbol server. (Inherited from Session [▶ 107].)

Methods

	Name	Description
	Close [▶ 115]	Closes this ISession [▶ 92] (Inherited from Session [▶ 107].)
	Connect [▶ 116]	Connects the session. (Inherited from Session [▶ 107].)
	ConnectAsync [▶ 122]	Connects the session. (Inherited from Session [▶ 107].)
	Disconnect [▶ 116]	Disconnects the session from the target. (Inherited from Session [▶ 107].)
	Dispose. [▶ 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session [▶ 107].)
	Dispose(Boolean) [▶ 725]	Releases unmanaged and - optionally - managed resources. (Inherited from AdsSessionBase [▶ 716].)
	EnsureConnection [▶ 728]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object. (Inherited from AdsSessionBase [▶ 716].)
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 725]	Finalizes an instance of the AdsSessionBase [▶ 716] class. (Inherited from AdsSessionBase [▶ 716].)

	Name	Description
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetSessionName [▶ 725]	Gets the name/string identifier of the session. (Inherited from AdsSessionBase [▶ 716].)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	OnConnect [▶ 726]	Handler function connecting the Session. (Inherited from AdsSessionBase [▶ 716].)
	OnConnectAsync [▶ 123]	Handler function connecting the Session. (Inherited from Session [▶ 107].)
	OnConnectionState Changed [▶ 121]	Handles the [E:ConnectionStateChanged] event. (Inherited from Session [▶ 107].)
	OnCreateSymbolSer ver [▶ 726]	Handler function creating the symbol server object. (Inherited from AdsSessionBase [▶ 716].)
	OnDisconnect [▶ 727]	Handler function disconnecting the session. (Inherited from AdsSessionBase [▶ 716].)
	OnGetAddress [▶ 727]	Handler function getting the address of the session. (Inherited from AdsSessionBase [▶ 716].)
	ToString [▶ 121]	Returns a String that represents this instance. (Inherited from Session [▶ 107].)

Events

	Name	Description
 	ConnectionStateCha nged [▶ 124]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from Session [▶ 107].)

Remarks

On top of the well known [AdsClient](#) [▶ 183] class that is used traditionally for ADS communication, the [AdsSession](#) class provides the following additionally abilities out of the box: These are used to provide more stable connections to ADS Servers than the [AdsClient](#) [▶ 183] can provide. The main issues are Resurrection / Self-Healing after communication timeouts, faster and less error prone reaction to communication errors (not necessarily waiting for communication timeouts) und enhanced communication diagnosis. These enhanced features are provided by the following additions to the TwinCAT.Ads API:

- [AdsConnection](#) [▶ 412] class.
- Enhanced diagnosis in form of communication statistics [Statistics](#) [▶ 722]
- (semi-automatic) Resurrectable client communication with [AdsConnection](#) [▶ 412] objects.
- Symbol caching [SymbolServer](#) [▶ 113]
- Fail fast handler for connection stabilization [IFailFastHandler](#)

The [AdsConnection](#) [▶ 412] is established by calling the [Connect](#). [▶ 116] method. The returned [AdsConnection](#) [▶ 412] can be used as long the [AdsSessionBase](#) [▶ 716] exists.

Examples

The following sample shows a simple use of the [AdsSessionBase](#) [▶ 716] object. The [AdsSession](#) object (and the dynamic [SymbolLoader](#) features) are only available from .NET 4 and upwards.

Use Session (async)

```

using System;
using System.Diagnostics;
using System.Threading;

using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.Ads.TypeSystem;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;

namespace Sample
{
    class SessionAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            AmsAddress address = ArgParser.Parse(args);

            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;
            SessionSettings settings = SessionSettings.Default; // Default settings are Async access with
            // Timeout 5 sec

            // Async access is necessary for Console applications!

            using (AdsSession session = new AdsSession(address, settings))
            {
                AdsConnection connection = (AdsConnection) session.Connect(); // Establish the connection
                connection.ConnectionStateChanged += Connection_ConnectionStateChanged;

                ConnectionState connectionState = connection.ConnectionState; // The actual connection state

                // Read the identification and version number of the device
                var result = await connection.ReadDeviceInfoAsync(cancel);

                result.ThrowOnError(); // Throws exception if failed.

                DeviceInfo deviceInfo = result.DeviceInfo;
                Version version = deviceInfo.Version.ConvertToStandard();
                Console.WriteLine(string.Format("DeviceName: {0}", deviceInfo.Name));
                Console.WriteLine(string.Format("DeviceVersion: {0}", version.ToString(3)));

                /// Read the state of the device
                var resultReadState = await connection.ReadStateAsync(cancel);
                resultReadState.ThrowOnError();

                StateInfo stateInfo = resultReadState.State;
                AdsState adsState = stateInfo.AdsState;
                short deviceState = stateInfo.DeviceState;

                Console.WriteLine(string.Format("DeviceState: {0}", deviceState));
                Console.WriteLine(string.Format("AdsState : {0}", adsState));

                // Other ADS methods (as formerly used on AdsClient) can be used also on connection object:

                // connection.ReadAsync(...)
                // connection.WriteAsync(...)
                // connection.AddDeviceNotificationEx += ...

                // Session communication Diagnostic:

                int resurrectionTries = connection.TotalResurrectingTries;
                int succeededResurrections = connection.TotalResurrections;

                AdsCommunicationStatistics statistics = session.Statistics; // The communication statistics

                // Symbol access:
                // The Session holds and Caches the Symbolic data information
                var resultDataTypes = await session.SymbolServer.GetDataTypesAsync(cancel);
                var resultSymbols = await session.SymbolServer.GetSymbolsAsync(cancel);

                if (resultDataTypes.Succeeded && resultSymbols.Succeeded) // Check for succeed
                {
                    IDataValueCollection<IDataType> types = resultDataTypes.DataTypes;

```

```

        ISymbolCollection<ISymbol> symbols = resultSymbols.Symbols;

        Symbol projectNameSymbol = (Symbol)symbols["TwinCAT_SystemInfoVarList._AppInfo.ProjectName"];

        var resultReadProjectName = await projectNameSymbol.ReadValueAsync(cancel);
        string projectName = (string)resultReadProjectName.Value;

        // Or use dynamic objects
        dynamic appInfo = symbols["TwinCAT_SystemInfoVarList._AppInfo"];
        string projectName2 = appInfo.ProjectName; // Property dynamically created (synchronous call)!
    }
    Console.WriteLine("");
    Console.WriteLine("Press [Enter] for leave:");
    Console.ReadLine();
}

private static void Connection_ConnectionStateChanged(object sender, ConnectionStateChangedEventArgs e)
{
    Console.WriteLine("Connection State changed (NewState: {0}, OldState: {1})",e.NewState,e.OldState);
}

```

Use Session (sync)

```

6.2.15.2 AdsSession Properties

The [AdsSession \[► 701\]](#) type exposes the following members.

Properties

	Name	Description
	Address [► 720]	Gets the target address of the AdsSessionBase [► 716] (Inherited from AdsSessionBase [► 716] .)
	AddressSpecifier [► 109]	Gets the communication endpoint address string representation. (Inherited from Session [► 107] .)
	Connection [► 720]	Gets the connection. (Inherited from AdsSessionBase [► 716] .)
 	ConnectionState [► 110]	Gets the current Connection state of the Session [► 107] (Inherited from Session [► 107] .)
	Disposed [► 111]	Gets a value indicating whether this Session [► 107] is disposed. (Inherited from Session [► 107] .)
	EstablishedAt [► 112]	Gets the UTC time when the session was established. (Inherited from Session [► 107] .)
	Id [► 112]	Gets the Session Identifier (Inherited from Session [► 107] .)
	IsConnected [► 113]	Gets a value indicating whether this instance is connected. (Inherited from Session [► 107] .)
	Logger [► 723]	Gets the logger interface or null. (Inherited from AdsSessionBase [► 716] .)
	Name [► 113]	Gets the name of the session (Inherited from Session [► 107] .)
	NetId [► 721]	Gets the NetId of the Session (Inherited from AdsSessionBase [► 716] .)
	Owner [► 721]	Gets the Session owner. (Inherited from AdsSessionBase [► 716] .)
	Port [► 722]	Gets the Ams Port of the Session (Inherited from AdsSessionBase [► 716] .)
	Settings [► 722]	Gets the settings of the Session/Connection. (Inherited from AdsSessionBase [► 716] .)
	Statistics [► 722]	Gets the Communication / Session statistics. (Inherited from AdsSessionBase [► 716] .)
	SymbolServer [► 113]	Gets the symbol server. (Inherited from Session [► 107] .)

6.2.15.3 AdsSession Methods

The [AdsSession](#) [▶ 701] type exposes the following members.

Methods

	Name	Description
	Close [▶ 115]	Closes this ISession [▶ 92] (Inherited from Session [▶ 107].)
	Connect [▶ 116]	Connects the session. (Inherited from Session [▶ 107].)
	ConnectAsync [▶ 122]	Connects the session. (Inherited from Session [▶ 107].)
	Disconnect [▶ 116]	Disconnects the session from the target. (Inherited from Session [▶ 107].)
	Dispose. [▶ 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session [▶ 107].)
	Dispose(Boolean) [▶ 725]	Releases unmanaged and - optionally - managed resources. (Inherited from AdsSessionBase [▶ 716].)
	EnsureConnection [▶ 728]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object. (Inherited from AdsSessionBase [▶ 716].)
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 725]	Finalizes an instance of the AdsSessionBase [▶ 716] class. (Inherited from AdsSessionBase [▶ 716].)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetSessionName [▶ 725]	Gets the name/string identifier of the session. (Inherited from AdsSessionBase [▶ 716].)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	OnConnect [▶ 726]	Handler function connecting the Session. (Inherited from AdsSessionBase [▶ 716].)
	OnConnectAsync [▶ 123]	Handler function connecting the Session. (Inherited from Session [▶ 107].)
	OnConnectionStateChanged [▶ 121]	Handles the [E:ConnectionStateChanged] event. (Inherited from Session [▶ 107].)
	OnCreateSymbolServer [▶ 726]	Handler function creating the symbol server object. (Inherited from AdsSessionBase [▶ 716].)
	OnDisconnect [▶ 727]	Handler function disconnecting the session. (Inherited from AdsSessionBase [▶ 716].)
	OnGetAddress [▶ 727]	Handler function getting the address of the session. (Inherited from AdsSessionBase [▶ 716].)
	ToString [▶ 121]	Returns a String that represents this instance. (Inherited from Session [▶ 107].)

[TwinCAT.Ads.AdsSession](#) [[▶ 701](#)]

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: [TwinCAT.Ads](#) (in [TwinCAT.Ads.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public abstract class AdsSessionBase : Session,
    IAdsSession, ISession, IConnectionStateProvider, ISymbolServerProvider
```

The [AdsSessionBase](#) type exposes the following members.

Constructors

	Name	Description
 	AdsSessionBase [▶ 718]	Initializes a new instance of the AdsSessionBase class.

Properties

	Name	Description
	Address [▶ 720]	Gets the target address of the AdsSessionBase
	AddressSpecifier [▶ 109]	Gets the communication endpoint address string representation. (Inherited from Session [▶ 107].)
	Connection [▶ 720]	Gets the connection.
 	ConnectionState [▶ 110]	Gets the current Connection state of the Session [▶ 107] (Inherited from Session [▶ 107].)

	Name	Description
	Disposed [▶ 111]	Gets a value indicating whether this Session [▶ 107] is disposed. (Inherited from Session [▶ 107].)
	EstablishedAt [▶ 112]	Gets the UTC time when the session was established. (Inherited from Session [▶ 107].)
	Id [▶ 112]	Gets the Session Identifier (Inherited from Session [▶ 107].)
	IsConnected [▶ 113]	Gets a value indicating whether this instance is connected. (Inherited from Session [▶ 107].)
	Logger [▶ 723]	Gets the logger interface or null.
	Name [▶ 113]	Gets the name of the session (Inherited from Session [▶ 107].)
	NetId [▶ 721]	Gets the NetId of the Session
	Owner [▶ 721]	Gets the Session owner.
	Port [▶ 722]	Gets the Ams Port of the Session
	Settings [▶ 722]	Gets the settings of the Session/Connection.
	Statistics [▶ 722]	Gets the Communication / Session statistics.
	SymbolServer [▶ 113]	Gets the symbol server. (Inherited from Session [▶ 107].)

Methods

	Name	Description
	Close [▶ 115]	Closes this ISession [▶ 92] (Inherited from Session [▶ 107].)
	Connect [▶ 116]	Connects the session. (Inherited from Session [▶ 107].)
	ConnectAsync [▶ 122]	Connects the session. (Inherited from Session [▶ 107].)
	Disconnect [▶ 116]	Disconnects the session from the target. (Inherited from Session [▶ 107].)
	Dispose. [▶ 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session [▶ 107].)
	Dispose(Boolean) [▶ 725]	Releases unmanaged and - optionally - managed resources. (Overrides Session.Dispose(Boolean) [▶ 118].)
	EnsureConnection [▶ 728]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 725]	Finalizes an instance of the AdsSessionBase class. (Overrides Object.Finalize.)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetSessionName [▶ 725]	Gets the name/string identifier of the session. (Overrides Session.GetSessionName. [▶ 118].)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)

	Name	Description
	OnConnect [▶ 726]	Handler function connecting the Session. (Overrides Session.OnConnect(Boolean) [▶ 119].)
	OnConnectAsync [▶ 123]	Handler function connecting the Session. (Inherited from Session [▶ 107].)
	OnConnectionState Changed [▶ 121]	Handles the [E:ConnectionStateChanged] event. (Inherited from Session [▶ 107].)
	OnCreateSymbolSer ver [▶ 726]	Handler function creating the symbol server object. (Overrides Session.OnCreateSymbolServer . [▶ 119].)
	OnDisconnect [▶ 727]	Handler function disconnecting the session. (Overrides Session.OnDisconnect . [▶ 120].)
	OnGetAddress [▶ 727]	Handler function getting the address of the session. (Overrides Session.OnGetAddress . [▶ 120].)
	ToString [▶ 121]	Returns a String that represents this instance. (Inherited from Session [▶ 107].)

Events

	Name	Description
 	ConnectionStateCha nged [▶ 124]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from Session [▶ 107].)

Reference

Initializes a new instance of the [AdsSessionBase](#) [[▶ 716](#)] class.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected AdsSessionBase(
    AmsAddress address,
    SessionSettings settings,
    IAdsClientFactory factory,
    ILogger? logger,
    Object? owner
)
```

Parameters

address	Type: TwinCAT.Ads.AmsAddress [▶ 752] The address.
settings	Type: TwinCAT.Ads.SessionSettings [▶ 1193] The settings.
factory	Type: IAdsClientFactory The client factory

logger	Type: Microsoft.Extensions.Logging.ILogger The logger.
owner	Type: System.Object The session owner

Exceptions

Exception	Condition
ArgumentNullException	address

6.2.16.3 AdsSessionBase Methods

The [AdsSessionBase](#) [▶ 716] type exposes the following members.

Methods

	Name	Description
	Close [▶ 115]	Closes this ISession [▶ 92] (Inherited from Session [▶ 107].)
	Connect [▶ 116]	Connects the session. (Inherited from Session [▶ 107].)
	ConnectAsync [▶ 122]	Connects the session. (Inherited from Session [▶ 107].)
	Disconnect [▶ 116]	Disconnects the session from the target. (Inherited from Session [▶ 107].)
	Dispose . [▶ 117]	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session [▶ 107].)
	Dispose(Boolean) [▶ 725]	Releases unmanaged and - optionally - managed resources. (Overrides Session.Dispose(Boolean) [▶ 118].)

	Name	Description
	EnsureConnection [▶ 728]	Ensures, that the Session [▶ 92] is connected and returns the Connection [▶ 79] object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize [▶ 725]	Finalizes an instance of the AdsSessionBase [▶ 716] class. (Overrides Object.Finalize .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetSessionName [▶ 725]	Gets the name/string identifier of the session. (Overrides Session.GetSessionName . [▶ 118].)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	OnConnect [▶ 726]	Handler function connecting the Session. (Overrides Session.OnConnect(Boolean) [▶ 119].)
	OnConnectAsync [▶ 123]	Handler function connecting the Session. (Inherited from Session [▶ 107].)
	OnConnectionStateChanged [▶ 121]	Handles the [E:ConnectionStateChanged] event. (Inherited from Session [▶ 107].)
	OnCreateSymbolServer [▶ 726]	Handler function creating the symbol server object. (Overrides Session.OnCreateSymbolServer . [▶ 119].)
	OnDisconnect [▶ 727]	Handler function disconnecting the session. (Overrides Session.OnDisconnect . [▶ 120].)
	OnGetAddress [▶ 727]	Handler function getting the address of the session. (Overrides Session.OnGetAddress . [▶ 120].)
	ToString [▶ 121]	Returns a String that represents this instance. (Inherited from Session [▶ 107].)

6.2.16.3.2 AdsSessionBase.Finalize Method

Finalizes an instance of the [AdsSessionBase](#) [[▶](#) [716](#)] class.

Namespace: [TwinCAT.Ads](#) [[▶](#) [179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected override void Finalize()
```

Implements

[Object.Finalize](#).

Reference

[AdsSessionBase Class](#) [[▶](#) [716](#)]

[TwinCAT.Ads Namespace](#) [[▶](#) [179](#)]

6.2.16.3.3 AdsSessionBase.GetSessionName Method

Gets the name/string identifier of the session.

Namespace: [TwinCAT.Ads](#) [[▶](#) [179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected override string GetSessionName()
```

Return Value

Type: [String](#)
System.String.

Reference

[AdsSessionBase Class](#) [▸ 716]

[TwinCAT.Ads Namespace](#) [▸ 179]

6.2.16.3.4 AdsSessionBase.OnConnect Method

Handler function connecting the Session.

Namespace: [TwinCAT.Ads](#) [▸ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected override IConnection? OnConnect (
    bool reconnect
)
```

Parameters

reconnect	Type: System.Boolean
-----------	--------------------------------------

Return Value

Type: [IConnection](#) [▸ 79]
IConnection.

Reference

[AdsSessionBase Class](#) [▸ 716]

[TwinCAT.Ads Namespace](#) [▸ 179]

6.2.16.3.5 AdsSessionBase.OnCreateSymbolServer Method

Handler function creating the symbol server object.

Namespace: [TwinCAT.Ads](#) [▸ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
protected override ISymbolServer OnCreateSymbolServer()
```

Return Value

Type: [ISymbolServer](#) [[▶ 2719](#)]
[ISymbolServer](#).

Exceptions

Exception	Condition
SessionNotConnectedException [▶ 137]	The connection is not established!

Reference

6.2.20 AdsSumCommandException Class

The exception that is thrown when an ADS SumCommandBase error occurs.

Inheritance Hierarchy

System.Object
 System.Exception
 TwinCAT.AdsException [▶ 61]
 TwinCAT.Ads.AdsErrorException [▶ 682]
 TwinCAT.Ads.AdsSumCommandException

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
[SerializableAttribute]
public sealed class AdsSumCommandException : AdsErrorException
```

The AdsSumCommandException type exposes the following members.

Constructors

	Name	Description
	AdsSumCommandException [▶ 736]	Initializes a new Instance of the AdsErrorException class.

Properties

	Name	Description
	Data	Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception .)
	ErrorCode [▶ 686]	Gets the error code of the Exception. (Inherited from AdsErrorException [▶ 682] .)
	HelpLink	Gets or sets a link to the help file associated with this exception. (Inherited from Exception .)
	HResult	Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception .)
	InnerException	Gets the Exception instance that caused the current exception. (Inherited from Exception .)
	Message	Gets a message that describes the current exception. (Inherited from Exception .)
	Source	Gets or sets the name of the application or the object that causes the error. (Inherited from Exception .)
	StackTrace	Gets a string representation of the immediate frames on the call stack. (Inherited from Exception .)
	SumCommand [▶ 737]	Gets the sum command.

	Name	Description
	TargetSite	Gets the method that throws the current exception. (Inherited from Exception .)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetBaseException	When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetObjectData [▶ 738]	When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides AdsErrorException.GetObjectData(SerializationInfo, StreamingContext) [▶ 689].)
	GetType	Gets the runtime type of the current instance. (Inherited from Exception .)
	ToString	Creates and returns a string representation of the current exception. (Inherited from Exception .)

6.2.22 AdsTransMode Enumeration

ADS Transmission Mode for ADS Notifications.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AdsTransMode
```

Members

	Member name	Value	Description
	None	0	None / Uninitialized transport mode. No AdsNotification [▸ 991] event is fired.
	Cyclic	3	<p>The AdsNotification [▸ 991] event is fired cyclically.</p> <p>The Notification will be registered on the ADS Server side for a cyclical trigger (dependant on time parameter) and is bound to the 'default' task of the addressed target. In case of the PLC target (e.g. Port 851) the default task is the first configured task.</p> <p>Each time the 'default' task has finished its cycle the realtime system will check for the expired cycle time and sends the AdsNotification [▸ 991] message on expiry.</p> <p>The used ContextMask for the 'default' task is 0.</p> <p>Please be aware, that server side 'Change' notifications stress the realtime system and should be handled with care. Therefore, dependent of the cycle time of the task and the capabilities of the system only a limited set of Cyclic Notifications should be used!</p>
	OnChange	4	<p>On-Change AdsNotification [▸ 991] event.</p> <p>The Notification will be registered on the ADS Server side for an on-change and optional cyclical trigger (dependant on parameters) and is bound to the 'default' task of the addressed target. In case of the PLC target (e.g. Port 851) the default task is the first configured task.</p> <p>Each time this task has finished its cycle the realtime system will check for the changed value and an optional expired cycle time and sends the AdsNotification [▸ 991] message on change or expiry.</p> <p>The used ContextMask for the 'default' task is 0.</p> <p>Please be aware, that server side 'OnChange' notifications stress the realtime system / the default task with value comparisons.</p>

	Member name	Value	Description
			Therefore, dependent of the cycle time of the task and the capabilities of the system a higher amount of notification registrations should be handled with care !
	CyclicInContext	5	<p>The AdsNotification [▶ 991] event is fired cyclically within the given task context.</p> <p>A Value of parameter is interpreted as task context number ContextMask [▶ 1765]. This can be important, if the notifications have to be synchronous with specific tasks, but should not be used in the default case.</p> <p>The Notification will be registered on the ADS Server side for a cyclical trigger (dependant on time parameter) and is bound to the task specified by the ContextMask of the addressed target. In case of the PLC target (e.g. Port 851) the ContextMask is the Index of the global TASKINFOARRAY - 1.</p> <p>Each time this task has finished its cycle the realtime system will check for the expired cycle time and sends the AdsNotification [▶ 991] message on expiry.</p>
	OnChangeInContext	6	<p>The AdsNotification [▶ 991] event is fired when the data changes within the given task context.</p> <p>A Value of parameter is interpreted as task context number ContextMask [▶ 1765]. This can be important, if the notifications have to be synchronously with specific tasks, but should not be used in the default case.</p> <p>The Notification will be registered on the ADS Server side for an on-change and optional cyclical trigger (dependant on parameters) and is bound to the task specified by the ContextMask of the addressed target. In case of the PLC target (e.g. Port 851) the ContextMask is the Index of the global TASKINFOARRAY - 1. Each time this task has finished its cycle the realtime system will check for the changed value and an optional expired cycle time and sends the AdsNotification [▶ 991] message on change or expiry.</p>

	Member name	Value	Description
			<p>Please be aware, that server side 'OnChange' notifications stress the realtime system / the default task with value comparisons. Therefore, dependent of the cycle time of the task and the capabilities of the system only a limited set of OnChange Notifications should be used!</p>

Remarks

The AdsTransMode configures the registration of the [AdsNotification](#) [► 991] at the server system and how the parameters of the [AddDeviceNotification\(String, Int32, NotificationSettings, Object\)](#) [► 971] are interpreted. The following general scenarios are addressed:

- Cyclic notifications.
- Notifications on value change.
- Server side and Client side notifications.
- Binding of notifications to specific tasks.

In the default case the OnChange or the Cyclic (Server cycle) should be used. All other modes are side cases for special purposes.

More about the AdsNotifications: [ADS Notification concept](#) [► 26].

6.2.23 AdsVersion Class

The structure contains the version number, revision number and build number.

Inheritance Hierarchy

[System.Object](#)

 TwinCAT.Ads.AdsVersion

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class AdsVersion
```

The AdsVersion type exposes the following members.

Properties

	Name	Description
	Build [▶ 747]	Gets or sets the build number.
	Empty [▶ 747]	Get the Empty/Uninitialized Version (0,0,0)
	IsEmpty [▶ 747]	Gets a value indicating whether this instance is empty / uninitialized.
	Revision [▶ 748]	Gets or sets the revision number.
	Version [▶ 748]	Gets or sets the version number.

Methods

	Name	Description
	ConvertToStandard [▶ 749]	Converts this AdsVersion to a .NET Framework Version [▶ 748] object.
	Create(Version) [▶ 750]	Creates the AdsVersion object form Version .
	Create(Int32, Int32) [▶ 750]	Creates a new AdsVersion object.
	Create(Int32, Int32, Int32) [▶ 751]	Creates a new AdsVersion object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

This version structure is used to indicate Version numbers of TwinCAT.AdsServers.

Reference

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.23.1 AdsVersion Constructor**Overload List**

	Name	Description
	AdsVersion(Byte.) [▶ 745]	Initializes a new instance of the AdsVersion [▶ 743] class.

	Name	Description
	AdsVersion(Int32, Int32, Int32) [▶ 745]	Initializes a new instance of the AdsVersion [▶ 743] struct.

Reference

[AdsVersion Class](#) [[▶ 743](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.23.1.1 AdsVersion Constructor (.Byte.)

Initializes a new instance of the [AdsVersion](#) [[▶ 743](#)] class.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public AdsVersion(
    byte[] bytes
)
```

Parameters

bytes Type: [.System.Byte](#).
The bytes.

Exceptions

Exception	Condition
ArgumentNullException	bytes
ArgumentException	bytes

```
public class AmsAddress
```

The AmsAddress type exposes the following members.

Constructors

	Name	Description
	AmsAddress. [► 754]	Protected constructor
	AmsAddress(AmsAddress) [► 756]	Copy constructor
	AmsAddress(AmsPort) [► 756]	Constructor
	AmsAddress(Int32) [► 755]	Constructor
	AmsAddress(String) [► 755]	Initializes a new instance of the AmsAddress class.
	AmsAddress(AmsNetId, Int32) [► 759]	Constructor
	AmsAddress(AmsNetId, AmsPort) [► 759]	Constructor
	AmsAddress(Byte, Int32) [► 757]	Constructor
	AmsAddress(Byte, AmsPort) [► 757]	Constructor
	AmsAddress(String, Int32) [► 758]	Constructor

	Name	Description
	AmsAddress(String, AmsPort) [▶ 758]	Constructor

Properties

	Name	Description
 	Empty [▶ 760]	Gets an Empty Address.
	NetId [▶ 760]	Gets the NetId
	Port [▶ 761]	Gets the Port number

Methods

	Name	Description
	Clone [▶ 762]	Clones this instance.
	Equals [▶ 762]	Equals (Overrides Object.Equals(Object) .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode [▶ 763]	Gets the HashCode of the Address (Overrides Object.GetHashCode() .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
 	Parse [▶ 763]	Parses a string to an AmsAddress object.
	SetNetId [▶ 764]	Sets the net identifier.
	SetPort [▶ 764]	Sets the port.
	ToString [▶ 765]	Converts the Address to String 'NetId:Port' (Overrides Object.ToString() .)
 	TryParse [▶ 765]	Tries to parse the AmsAddress from string.

Operators

	Name	Description
 	Equality [▶ 766]	Operator==
 	Inequality [▶ 766]	Implements the != operator.

Remarks

The `AmsAddress` consists of `NetId` [▶ 760] and `Port` [▶ 761] information and once it is constructed is immutable.

6.2.24.3 AmsAddress Methods

The [AmsAddress](#) [[▶ 752](#)] type exposes the following members.

Methods

	Name	Description
	Clone [▶ 762]	Clones this instance.
	Equals [▶ 762]	Equals (Overrides Object.Equals(Object) .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode [▶ 763]	Gets the HashCode of the Address (Overrides Object.GetHashCode() .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	Parse [▶ 763]	Parses a string to an AmsAddress [▶ 752] object.
	SetNetId [▶ 764]	Sets the net identifier.

	Name	Description
	SetPort [▶ 764]	Sets the port.
	ToString [▶ 765]	Converts the Address to String 'NetId:Port' (Overrides Object.ToString..)
	TryParse [▶ 765]	Tries to parse the AmsAddress [▶ 752] from string.
		

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.3.1 AmsAddress.Clone Method

Clones this instance.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AmsAddress Clone()
```

Return Value

Type: [AmsAddress](#) [[▶ 752](#)]

AmsAddress.

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.3.2 AmsAddress.Equals Method

Equals

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override bool Equals(
    Object? obj
)
```

Parameters

obj	Type: System.Object The object to compare with the current object.
-----	---

Return Value

Type: [Boolean](#)

true if the specified [Object](#) is equal to this instance; otherwise, false.

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.3.3 AmsAddress.GetHashCode Method

Gets the HashCode of the Address

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override int GetHashCode()
```

Return Value

Type: [Int32](#)

A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.3.4 AmsAddress.Parse Method

Parses a string to an [AmsAddress](#) [[▶ 752](#)] object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AmsAddress Parse(  
    string str  
)
```

Parameters

str	Type: System.String The string.
-----	--

Return Value

Type: [AmsAddress](#) [[▶ 752](#)]

AmsAddress.

Exceptions

Exception	Condition
FormatException	

Reference

6.2.24.3.7 AmsAddress.ToString Method

Converts the Address to String 'NetId:Port'

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override string ToString()
```

Return Value

Type: [String](#)

A [String](#) that represents this instance.

Reference

[AmsAddress Class](#) [► 752]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.24.3.8 AmsAddress.TryParse Method

Tries to parse the [AmsAddress](#) [► 752] from string.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool TryParse(  
    string str,  
    out AmsAddress?? address  
)
```

Parameters

str	Type: System.String The STR.
address	Type: TwinCAT.Ads.AmsAddress [► 752]. The address.

Return Value

Type: [Boolean](#)

true if the address is successfully parsed, false otherwise.

Reference

6.2.24.4 AmsAddress Operators

The [AmsAddress](#) [► 752] type exposes the following members.

Operators

	Name	Description
 	Equality [▶ 766]	Operator==
 	Inequality [▶ 766]	Implements the != operator.

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.4.1 AmsAddress.Equality Operator

Operator==

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool operator ==(
    AmsAddress? o1,
    AmsAddress? o2
)
```

Parameters

o1	Type: TwinCAT.Ads.AmsAddress [▶ 752] The o1.
o2	Type: TwinCAT.Ads.AmsAddress [▶ 752] The o2.

Return Value

Type: [Boolean](#)

The result of the operator.

Reference

[AmsAddress Class](#) [[▶ 752](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.24.4.2 AmsAddress.Inequality Operator

Implements the != operator.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool operator !=(
    AmsAddress? o1,
    AmsAddress? o2
)
```

Parameters

o1	Type: TwinCAT.Ads.AmsAddress [▶ 752] The o1.
o2	Type: TwinCAT.Ads.AmsAddress [▶ 752] The o2.

Return Value

Type: [Boolean](#)
The result of the operator.

Reference

[AmsAddress Class](#) [▶ 752]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.25 AmsNetId Class

AMS/ADS Net ID

Inheritance Hierarchy

[System.Object](#)
TwinCAT.Ads.AmsNetId

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
[SerializableAttribute]
public class AmsNetId : IComparable<AmsNetId>,
    IComparable
```

The AmsNetId type exposes the following members.

Constructors

	Name	Description
	AmsNetId(AmsNetId) [▶ 771]	Copy Constructor
	AmsNetId(Byte) [▶ 770]	Constructor
	AmsNetId(ReadOnlySpan.Byte) [▶ 772]	Initializes a new instance of the AmsNetId class from Memory.
	AmsNetId(String) [▶ 771]	Constructor

Properties

	Name	Description
 	Broadcast [▶ 773]	Gets the broadcast address (255.255.255.255.255.255)
 	Empty [▶ 774]	Creates an empty NetId ("0.0.0.0.0.0")
	IsBroadcast [▶ 774]	Gets a value indicating whether this AmsNetId is the broadcast address (255.255.255.255.255.255)
	IsEmpty [▶ 774]	Gets a value indicating whether this instance is empty / Uninitialized (AmsNetId: 0.0.0.0.0.0)
	IsLocal [▶ 775]	Determines, whether the AmsNetId is the Address of the local system (or the LocalHost [▶ 777] address).
	IsLoopback [▶ 775]	Indicates, that this AmsNetId indicates a Loopback (ID: 127.0.0.1.1.1)
	IsSubAddress [▶ 776]	Gets a value indicating whether this AmsNetId indicates a SubNet.
	Item [▶ 776]	Gets or sets the Byte with the specified index.
 	Local [▶ 777]	Gets the Local Net ID (System service must be running)
 	LocalHost [▶ 777]	Creates the local NetId ("127.0.0.1.1.1")

Methods

	Name	Description
	AsSpan [▶ 779]	Returns the AmsNetId as byte Span.
	Clone [▶ 779]	Clones the NetId
	CompareTo(AmsNetId) [▶ 781]	Compares the current object with another object of the same type.
	CompareTo(Object) [▶ 780]	Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object.
	Equals(Object) [▶ 782]	Equals (Overrides Object.Equals(Object) .)
 	Equals(AmsNetId, AmsNetId) [▶ 782]	Determines whether the specified AmsNetIds are equal.
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
 	FromBinHexString [▶ 783]	Creates the AmsNetId from bin hex string.
	GetHashCode [▶ 783]	Gets the HashCode of the Address (Overrides Object.GetHashCode() .)

	Name	Description
	GetType	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)
 	IsSameTarget(AmsNetId, AmsNetId) [▶ 784]	Determines whether the AmsNetIds refer to the same target.
 	IsSameTarget(AmsNetId, AmsNetId, Boolean) [▶ 785]	Determines whether the AmsNetIds refer to the same target.
	MemberwiseClone	Creates a shallow copy of the current <u>Object</u> . (Inherited from <u>Object</u> .)
	NetIdsEqual(.Byte.) [▶ 786]	Compares the netIds
 	NetIdsEqual(.Byte., .Byte.) [▶ 787]	Compares the NetIds
 	NetIdsEqual(.Byte., .Byte., Boolean) [▶ 787]	Compares the NetIds for SubID equality.
 	Parse [▶ 788]	Converts the string representation of the address to AmsNetId.
	ToBinHex. [▶ 789]	Converts the AmsNetId to a BinHex string.
 	ToBinHex(AmsNetId) [▶ 789]	Converts the specified AmsNetId to a BinHex string.
	ToBytes [▶ 790]	Converts the NetId object to byte array
	ToString. [▶ 791]	Converts the netId to string (Overrides <u>Object.ToString</u> .)
	ToString(String, IFormatProvider) [▶ 791]	Returns a <u>String</u> that represents this instance.
 	TryGetLocalNetId [▶ 793]	Gets the Local NetID
 	TryParse [▶ 792]	Converts the string representation of the address to AmsNetId.
	TryWriteBytes [▶ 792]	Writes the AmsNetId to memory.

Operators

	Name	Description
 	Equality [▶ 794]	Operator==
	Inequality [▶ 794]	Implements the != operator.

	Name	Description

6.2.25.2 AmsNetId Properties

The [AmsNetId](#) [▸ 767] type exposes the following members.

Properties

	Name	Description
 S	Broadcast [▶ 773]	Gets the broadcast address (255.255.255.255.255.255)
 S	Empty [▶ 774]	Creates an empty NetId ("0.0.0.0.0.0")
	IsBroadcast [▶ 774]	Gets a value indicating whether this AmsNetId [▶ 767] is the broadcast address (255.255.255.255.255.255)
	IsEmpty [▶ 774]	Gets a value indicating whether this instance is empty / Uninitialized (AmsNetId: 0.0.0.0.0.0)
	IsLocal [▶ 775]	Determines, whether the AmsNetId [▶ 767] is the Address of the local system (or the LocalHost [▶ 777] address).
	IsLoopback [▶ 775]	Indicates, that this AmsNetId [▶ 767] indicates a Loopback (ID: 127.0.0.1.1.1)
	IsSubAddress [▶ 776]	Gets a value indicating whether this AmsNetId [▶ 767] indicates a SubNet.
	Item [▶ 776]	Gets or sets the Byte with the specified index.
 S	Local [▶ 777]	Gets the Local Net ID (System service must be running)
 S	LocalHost [▶ 777]	Creates the local NetId ("127.0.0.1.1.1")

Reference

[AmsNetId Class](#) [[▶ 767](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.25.2.1 AmsNetId.Broadcast Property

Gets the broadcast address (255.255.255.255.255.255)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AmsNetId Broadcast { get; }
```

Property Value

Type: [AmsNetId](#) [[▶ 767](#)]

The broadcast.

Reference

[AmsNetId Class](#) [[▶ 767](#)]

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.2 AmsNetId.Empty Property

Creates an empty NetId ("0.0.0.0.0.0")

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AmsNetId Empty { get; }
```

Property Value

Type: [AmsNetId \[► 767\]](#)

The empty.

Reference

[AmsNetId Class \[► 767\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.3 AmsNetId.IsBroadcast Property

Gets a value indicating whether this [AmsNetId \[► 767\]](#) is the broadcast address (255.255.255.255.255.255)

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsBroadcast { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is broadcast; otherwise, false.

Reference

[AmsNetId Class \[► 767\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.4 AmsNetId.IsEmpty Property

Gets a value indicating whether this instance is empty / Uninitialized (AmsNetId: 0.0.0.0.0.0)

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsEmpty { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is empty; otherwise, false.

Reference

[AmsNetId Class](#) [► 767]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.25.2.5 AmsNetId.IsLocal Property

Determines, whether the [AmsNetId](#) [► 767] is the Address of the local system (or the [LocalHost](#) [► 777] address).

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsLocal { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is local; otherwise, false.

Remarks

True is also returned for the local host AmsNetId. Comparing the [AmsNetId](#) [► 767] doesn't include the SubNetIds (Byte-Indices 4 and 5), what means SubNetIds are ignored.

Reference

[AmsNetId Class](#) [► 767]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.25.2.6 AmsNetId.IsLoopback Property

Indicates, that this [AmsNetId](#) [► 767] indicates a Loopback (ID: 127.0.0.1.1.1)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsLoopback { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is loop back; otherwise, false.

Reference

[AmsNetId Class](#) [► 767]

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.7 AmsNetId.IsSubAddress Property

Gets a value indicating whether this [AmsNetId \[► 767\]](#) indicates a SubNet.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public bool IsSubAddress { get; }
```

Property Value

Type: [Boolean](#)

true if this instance indicates a subnet; otherwise, false.

Remarks

A Subnet is indicated, when the [AmsNetId \[► 767\]](#) doesn't end with **X.X.X.X.1.1**

Reference

[AmsNetId Class \[► 767\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.8 AmsNetId.Item Property

Gets or sets the [Byte](#) with the specified index.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public byte this[  
    int i  
] { get; set; }
```

Parameters

i	Type: System.Int32 The index.
---	--

Return Value

Type: [Byte](#)
System.Byte.

Reference

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.25.2.9 AmsNetId.Local Property

Gets the Local Net ID (System service must be running)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AmsNetId Local { get; }
```

Property Value

Type: [AmsNetId](#) [[▶ 767](#)]

The local.

Remarks

The system service must be running

Reference

[AmsNetId Class](#) [[▶ 767](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.25.2.10 AmsNetId.LocalHost Property

Creates the local NetId ("127.0.0.1.1.1")

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static AmsNetId LocalHost { get; }
```

Property Value

Type: [AmsNetId](#) [[▶ 767](#)]

The local host.

Reference

6.2.25.3 AmsNetId Methods

The [AmsNetId](#) [[▶ 767](#)] type exposes the following members.

Methods

	Name	Description
	AsSpan [▶ 779]	Returns the AmsNetId [▶ 767] as byte Span.
	Clone [▶ 779]	Clones the NetId

	Name	Description
	CompareTo(AmsNetId) [▶ 781]	Compares the current object with another object of the same type.
	CompareTo(Object) [▶ 780]	Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object.
	Equals(Object) [▶ 782]	Equals (Overrides Object.Equals(Object) .)
 	Equals(AmsNetId, AmsNetId) [▶ 782]	Determines whether the specified AmsNetId [▶ 767]s are equal.
 	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
 	FromBinHexString [▶ 783]	Creates the AmsNetId [▶ 767] from bin hex string.
	GetHashCode [▶ 783]	Gets the GetHashCode of the Address (Overrides Object.GetHashCode .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
 	IsSameTarget(AmsNetId, AmsNetId) [▶ 784]	Determines whether the AmsNetId [▶ 767]s refer to the same target.
 	IsSameTarget(AmsNetId, AmsNetId, Boolean) [▶ 785]	Determines whether the AmsNetId [▶ 767]s refer to the same target.
 	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	NetIdsEqual(.Byte.) [▶ 786]	Compares the netIds
 	NetIdsEqual(.Byte., .Byte.) [▶ 787]	Compares the NetIds
 	NetIdsEqual(.Byte., .Byte., Boolean) [▶ 787]	Compares the NetIds for SubID equality.
 	Parse [▶ 788]	Converts the string representation of the address to AmsNetId [▶ 767].
	ToBinHex . [▶ 789]	Converts the AmsNetId [▶ 767] to a BinHex string.
 	ToBinHex(AmsNetId) [▶ 789]	Converts the specified AmsNetId [▶ 767] to a BinHex string.
	ToBytes [▶ 790]	Converts the NetId object to byte array
	ToString . [▶ 791]	Converts the netId to string (Overrides Object.ToString .)

	Name	Description
	ToString(String, IFormatProvider) [▶ 791]	Returns a String that represents this instance.
 	TryGetLocalNetId [▶ 793]	Gets the Local NetID
 	TryParse [▶ 792]	Converts the string representation of the address to AmsNetId [▶ 767].
	TryWriteBytes [▶ 792]	Writes the AmsNetId [▶ 767] to memory.

6.2.25.3.7.1 AmsNetId.IsSameTarget Method (AmsNetId, AmsNetId)

Determines whether the [AmsNetId](#) [► 767]s refer to the same target.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool IsSameTarget(
    AmsNetId netIDA,
    AmsNetId netIDB
)
```

Parameters

netIDA	Type: TwinCAT.Ads.AmsNetId [► 767] NetID of target system A
netIDB	Type: TwinCAT.Ads.AmsNetId [► 767] NetID of target system B

Return Value

Type: [Boolean](#)
 true if the target systems are the same, otherwise false.

Remarks

In comparison to the [Equals\(Object\) \[▸ 782\]](#) or [Equals\(AmsNetId, AmsNetId\) \[▸ 782\]](#) methods, this Method also checks against the LocalHost ID, which means that [LocalHost \[▸ 777\]](#) is the same target as [Local \[▸ 777\]](#)

Determines whether the [AmsNetId \[▸ 767\]](#)s refer to the same target.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool IsSameTarget(
    AmsNetId netIDA,
    AmsNetId netIDB,
    bool ignoreSubId
)
```

Parameters

netIDA	Type: TwinCAT.Ads.AmsNetId [▸ 767] NetID of target system A
netIDB	Type: TwinCAT.Ads.AmsNetId [▸ 767] NetID of target system B
ignoreSubId	Type: System.Boolean Indicates only to check the 4 parts of the address (for SubId check).

Return Value

Type: [Boolean](#)
 true if the target systems are the same, otherwise false.

Exceptions

Exception	Condition
ArgumentNullException	netIDA
ArgumentNullException	netIDB

Remarks

In comparison to the [Equals\(Object\)](#) [▶ 782] or [Equals\(AmsNetId, AmsNetId\)](#) [▶ 782] methods, this Method also checks against the LocalHost ID, which means that [LocalHost](#) [▶ 777] is the same target as [Local](#) [▶ 777]

	UNFIXEDPORT	0	UNFIXEDPORT / Uninitialized
	USEDEFAULT	65535	Use default port

Remarks

The AmsPort enumeration defines the pre-occupied port numbers for Beckhoff AmsServers. Additionally the free areas for custom AmsServers are defined here.

Port Range	Description
1 .. 24999 (0x01 .. 0x61A7)	Internally Reserved for Beckhoff AMS Servers.

Port Range	Description
CUSTOMER_FIRST [▶ 1233] (25000, 0x61A8) <= PORT <= CUSTOMER_LAST [▶ 1233] (25999, 658F)	Reserved for Customer use. Don't forget to register your port at Beckhoff to prevent Port conflicts with other released AmsServers.
CUSTOMERPRIVATE_FIRST [▶ 1233] (26000, 0x6590) <= PORT <= CUSTOMERPRIVATE_LAST [▶ 1233] (26999, 6977)	Reserved for Customer private use. Private use means that AMSServers with this port never leave the customer private network and the customer is responsible by himself to prevent port conflicts in this area.
32768 .. PORT_LAST [▶ 1233] (65534) (0x8000 .. 0xFFFFE)	Dynamic ports used for AMSServers defined with UNFIXEDPORT. This is used by AdsClients which are in fact an AMSServer with dynamic port.

6.2.27 AmsRouterNotificationEventArgs Class

Arguments for the [IRouterNotificationProvider](#) [[▶ 1099](#)] events.

Inheritance Hierarchy

System.Object
 System.EventArgs
 TwinCAT.Ads.AmsRouterNotificationEventArgs

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public sealed class AmsRouterNotificationEventArgs : EventArgs
```

The AmsRouterNotificationEventArgs type exposes the following members.

Constructors

	Name	Description
	AmsRouterNotificationEventArgs [▶ 799]	Initializes a new instance of the AmsRouterNotificationEventArgs class.

Properties

	Name	Description
	State [▶ 799]	Current state of the AMS Router.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)

	Name	Description
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Methods

	Name	Description
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, Type, .Int32.) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object.

	Name	Description
	ReadAnyAsync.T. (UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device.
	ReadAnyAsync.T. (UInt32, .Int32, CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyAsync.T. (UInt32, UInt32, .Int32, CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object.
	ReadAnyString(UInt 32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable.
	ReadAnyString(UInt 32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address.
	ReadAnyStringAsyn c(UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable
	ReadAnyStringAsyn c(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously.
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device.

	Name	Description
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, Object, .Int32, CancellationToken) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, .Int32, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

[IAdsAnyAccess Interface](#) [► 804]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.30.1.1.1 IAdsAnyAccess.ReadAny.T. Method (UInt32)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
T ReadAny<T>(
    uint variableHandle
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
----------------	--

Type Parameters

T	The type of the value to read.
---	--------------------------------

Return Value

Type: T
The value of the read symbol.

Reference

[IAdsAnyAccess Interface](#) [► 804]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.30.1.1.2 IAdsAnyAccess.ReadAny.T. Method (UInt32, .Int32.)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
T ReadAny<T>(
    uint variableHandle,
    int[]? args
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
args	Type: .System.Int32 . Additional arguments.

Type Parameters

T	The type of the value to read.
---	--------------------------------

Return Value

Type: T
The value of the read symbol.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Type of value Parameter	Necessary Arguments (args)
string	args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [► 2927].
string[]	
Array

Parameters

variableHandle	Type: System.UInt32 The variable handle.
len	Type: System.Int32 The length.
encoding	Type: System.Text.Encoding The encoding.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAnyValue](#) [[▶ 1129](#)].

A task that represents the asynchronous read operation. The [ResultAnyValue](#) [[▶ 1129](#)] parameter contains the read string ([Value](#) [[▶ 1185](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

 [ResultAnyValue.Value Property](#) [[▶ 1131](#)]

6.2.30.1.4.2 IAdsAnyAccess.ReadAnyStringAsync Method (UInt32, UInt32, Int32, Encoding, CancellationToken)

Reads a string from a specified address asynchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultAnyValue> ReadAnyStringAsync(
    uint indexGroup,
    uint indexOffset,
```

```

    int len,
    Encoding encoding,
    CancellationToken cancel
)

```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
len	Type: System.Int32 The string length to be read.
encoding	Type: System.Text.Encoding The encoding.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAnyValue](#) [[▶ 1129](#)].

A task that represents the asynchronous read operation. The [ResultAnyValue](#) [[▶ 1129](#)] parameter contains the read value ([Value](#) [[▶ 1185](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

6.2.30.1.5 IAdsAnyAccess.WriteAny Method

Overload List

	Name	Description
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device.
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device.

[IAdsAnyAccess Interface](#) [[▶ 804](#)]

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.30.1.5.1 IAdsAnyAccess.WriteAny Method (UInt32, Object)

Writes an object synchronously to an ADS device.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void WriteAny(
    uint variableHandle,
    Object value
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
value	Type: System.Object Object to write to the ADS device.

Reference

6.2.30.1.5.2 IAdsAnyAccess.WriteAny Method (UInt32, Object, .Int32.)

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void WriteAny(
    uint variableHandle,
    Object value,
    int[]? args
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
value	Type: System.Object Object to write to the ADS device.
args	Type: .System.Int32 . Additional arguments.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Type of value Parameter	Necessary Arguments (args)
string	args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [▶ 2927].
string[]	
Array

Writes an object synchronously to an ADS device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void WriteAny(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[]? args
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
value	Type: System.Object Object to write to the ADS device.
args	Type: .System.Int32 . Additional arguments.

Remarks

If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Type of value Parameter	Necessary Arguments (args)

6.2.30.1.6 IAdsAnyAccess.WriteAnyAsync Method

Overload List

	Name	Description
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

	Name	Description
	WriteAnyAsync(UInt32, Object, .Int32., CancellationToken) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
	WriteAnyAsync(UInt32, UInt32, Object, .Int32., CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

6.2.30.1.6.1 IAdsAnyAccess.WriteAnyAsync Method (UInt32, Object, CancellationToken)

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultWrite> WriteAnyAsync (
    uint variableHandle,
    Object value,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable.
value	Type: System.Object Object to write to the ADS device.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [▶ 1187].

A task that represents the asynchronous task operation. The result parameter [ResultWrite](#) [▶ 1187] of the write operation contains the [ErrorCode](#) [▶ 1120].

6.2.31 IAdsConnectAddress Interface

Interface for method to connect the ADS client via AMS Address.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsConnectAddress : IAdsConnection,
    IConnection, IConnectionStateProvider, IAdsNotifications, IAdsSymbolicAccess, IAdsAnyAccess,
    IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider, IAdsStateControl,
    IAdsSymbolChangedProvider, IAdsRpcInvoke
```

The IAdsConnectAddress type exposes the following members.

Properties

	Name	Description
	Address [▶ 895]	Gets the AmsAddress [▶ 752] of the ADS server. (Inherited from IAdsConnection [▶ 876].)
	ClientAddress [▶ 895]	Get the AmsAddress [▶ 752] of the ADS client. (Inherited from IAdsConnection [▶ 876].)
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding. (Inherited from IConnection [▶ 79].)
	Id [▶ 81]	Gets the Connection Identifier . (Inherited from IConnection [▶ 79].)
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [▶ 79].)
	IsLocal [▶ 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection [▶ 876].)
	Session [▶ 82]	Gets the session that initiated this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Timeout [▶ 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [▶ 79].)

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(String, Int32, NotificationSettings,	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	Object , CancellationToken) [▶ 974]	
	AddDeviceNotificati onAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onEx(String, NotificationSettings, Object, Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificati onExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect . [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	Connect(AmsAddress) [▶ 873]	Connects the target ADS Device.
	Connect(Int32) [▶ 873]	Connects to the local target ADS Device.
	Connect(AmsNetId, Int32) [▶ 874]	Connects to the target ADS Device.
	Connect(String, Int32) [▶ 874]	Connects to the target ADS Device.
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
 	InvokeRpcMethodAsync(String, String, Object, CancellationTokentoken) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationTokentoken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)

	Name	Description
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
	Read(UInt32, Memory.Byte) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)
	Read(UInt32, UInt32, Memory.Byte) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, Int32) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, Int32) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, Int32) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, Int32) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, Int32, CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, .Int32., CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, UInt32, .Int32., CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	ReadAsync(UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▶ 995].)
	RegisterAdsStateChangedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	RegisterSymbolVersionChanged [▶ 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	RegisterSymbolVersionChangedAsync [▶ 1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32, UInt32.) [▶ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotificationEx(UInt32,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	UInt32 , NotificationSettings , Object , Type , .Int32 , UInt32 .) [▶ 989]	
	TryCreateVariableHandle [▶ 961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	TryDeleteDeviceNotification [▶ 990]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	TryDeleteVariableHandle [▶ 962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
 	TryInvokeRpcMethod (String , String , .Object , Object .) [▶ 1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod (String , String , .Object , .Object , Object .) [▶ 1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod (IRpcCallableInstance , IRpcMethod , .Object , .AnyTypeSpecifier ,, AnyTypeSpecifier , .Object , Object .) [▶ 1031]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod (String , String , .Object , .AnyTypeSpecifier , AnyTypeSpecifier , .Object , Object .) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
	TryRead (UInt32 , Memory.Byte , Int32 .) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	TryRead (UInt32 , UInt32 , Memory.Byte , Int32 .) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995].)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056].)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T. (ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T. (String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(StationInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteControl(StationInfo, ReadOnlyMemory.Byte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	TryWriteValue.T. (ISymbol , T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32 , Int32 , Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (String , T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolV ersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	UnregisterSymbolV ersionChangedAsyn c [▶ 1063]	Unregisters the symbol version changed asynchronous. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)
	Write(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, CancellationTok en) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, .Int32, CancellationTok en) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, .Int32., CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAsync(UInt32, ReadOnlyMemory.Byte., CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte., CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.Byte., CancellationToken) [▶ 1047]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionChanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
 	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146] s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729] s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
 	PollAdsState(TimeSpan) [▸ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsState(TimeSpan) [▸ 1257]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2(IObservable.Unit.) [▸ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2(TimeSpan) [▸ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▸ 1274]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2Async(TimeSpan, Cancellation.Token) [▸ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 3296]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 1259]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 3298]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 1260]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollDeviceState(IObservable.Unit.) [▸ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▸ 1157]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollDeviceState(TimeSpan) [▸ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▸ 1157]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)

	Name	Description
	PollDeviceStateAsync(IObservable.Unit, CancellationToken) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollDeviceStateAsync(TimeSpan, CancellationToken) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281] .)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281] .)
	PollValues(ISymbol, Type, IObservable.Unit) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, .Int32, TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, .Int32, TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)

	Name	Description
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit., Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan, Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32., IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , .Int32 , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit, Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan, Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit .) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)

	Name	Description
	ReadSysServStateAsync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(UInt32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RepeatedReadAsync (UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [1215].)
	RestartTwinCATAsync [3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
	SetAdsState [3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	SetAdsStateAsync [3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	WaitUntilRestarted [3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [3281].)
	WaitUntilRestartedAsync [3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
 	WhenAdsStateChanges [1261]	Gets an observable sequence of AdsState [729]s. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol) [1263]	Overloaded. Gets an observable sequence of Notification [1100]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(ISymbolCollection) [1264]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [1268]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol, NotificationSettings) [1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [1331]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(STRING, Type, NotificationSettings) [1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)
 	WhenNotification.T.(String, NotificationSettings) [1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)

	Name	Description
	WhenSymbolVersionChanges [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.31.1 IAdsConnectAddress Properties

The [IAdsConnectAddress](#) [[▶ 835](#)] type exposes the following members.

Properties

	Name	Description
	Address [▶ 895]	Gets the AmsAddress [▶ 752] of the ADS server. (Inherited from IAdsConnection [▶ 876].)
	ClientAddress [▶ 895]	Get the AmsAddress [▶ 752] of the ADS client. (Inherited from IAdsConnection [▶ 876].)
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding. (Inherited from IConnection [▶ 79].)
	Id [▶ 81]	Gets the Connection Identifier . (Inherited from IConnection [▶ 79].)
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [▶ 79].)

	Name	Description
	IsLocal [▶ 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection [▶ 876].)
	Session [▶ 82]	Gets the session that initiated this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Timeout [▶ 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [▶ 79].)

6.2.31.2 IAdsConnectAddress Methods

The [IAdsConnectAddress](#) [[▶ 835](#)] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect. [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	Connect(AmsAddress) [▶ 873]	Connects the target ADS Device.
	Connect(Int32) [▶ 873]	Connects to the local target ADS Device.
	Connect(AmsNetId, Int32) [▶ 874]	Connects to the target ADS Device.
	Connect(String, Int32) [▶ 874]	Connects to the target ADS Device.
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
 	InvokeRpcMethodAsync(String, String, Object, CancellationToken) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(IRpcCallableObject, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
	Read(UInt32, Memory.Byte) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)
	Read(UInt32, UInt32, Memory.Byte) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, Int32) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, .Int32., CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAnyAsync.T. (UInt32 , UInt32 , Int32 , CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString (UInt32 , Int32 , Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString (UInt32 , UInt32 , Int32 , Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync (UInt32 , Int32 , Encoding , CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync (UInt32 , UInt32 , Int32 , Encoding , CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync (UInt32 , Memory.Byte , CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	ReadAsync (UInt32 , UInt32 , Memory.Byte , CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▶ 995].)
	RegisterAdsStateChangedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	RegisterSymbolVersionChanged [▶ 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)

	Name	Description
	RegisterSymbolVersionChangedAsynchronous [1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [1061].)
	TryAddDeviceNotification (String, Int32, NotificationSettings, Object, UInt32.) [985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [991] event. (Inherited from IAdsNotifications [966].)
	TryAddDeviceNotification (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [991] event. (Inherited from IAdsNotifications [966].)
	TryAddDeviceNotificationEx (String, NotificationSettings, Object, Type, .Int32, UInt32.) [988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [993] event. (Inherited from IAdsNotifications [966].)
	TryAddDeviceNotificationEx (UInt32, UInt32, NotificationSettings, Object, Type, .Int32, UInt32.) [989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [993] event. (Inherited from IAdsNotifications [966].)
	TryCreateVariableHandle [961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [954].)
	TryDeleteDeviceNotification [990]	Deletes a registered notification. (Inherited from IAdsNotifications [966].)
	TryDeleteVariableHandle [962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [954].)
 	TryInvokeRpcMethod (String, String, .Object, Object.) [1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [1012].)
 	TryInvokeRpcMethod (String, String, .Object, .Object, Object.) [1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [1012].)
 	TryInvokeRpcMethod (IRpcCallableInstance)	Invokes the rpc method. (Inherited from IAdsRpcInvoke [1012].)

	Name	Description
	ce , IRpcMethod , .Object , .AnyTypeSpecifier “ AnyTypeSpecifier , .Object , Object .” [▶ 1031]	
 	TryInvokeRpcMethod(String, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, .Object, Object.) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012] .)
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954] .)
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995] .)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056] .)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadValue.T.(ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadValue.T.(String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065] .)
	TryReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954] .)
	TryReadWrite(UInt32, UInt32,	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995] .)

	Name	Description
	Memory.Byte. , ReadOnlyMemory.B yte., Int32.) [▶ 998]	
	TryWrite(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(Sta telInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteControl(Sta telInfo, ReadOnlyMemory.B yte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISym bol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(Strin g, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolV ersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	UnregisterSymbolV ersionChangedAsyn c [▶ 1063]	Unregisters the symbol version changed asynchronous. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)

	Name	Description
	Write(UInt32, UInt32, ReadOnlyMemory.BYTE) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, .Int32., CancellationToken) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, .Int32., CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAsync(UInt32, ReadOnlyMemory.BYTE, CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.BYTE, CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)

	Name	Description
	WriteControl(StateInfo) [► 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [► 1039].)
	WriteControl(StateInfo, ReadOnlyMemory.Byte) [► 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [► 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [► 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [► 1039].)
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.Byte, CancellationToken) [► 1047]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [► 1039].)
	WriteValue(ISymbol, Object) [► 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValue(String, Object) [► 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValue.T.(ISymbol, T) [► 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValue.T.(String, T) [► 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValueAsync(ISymbol, Object, CancellationToken) [► 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [► 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [► 1065].)
	WriteValueAsync.T.(String, T, CancellationToken) [► 1091]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [► 1065].)

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2Async(TimeSpan, Cancellation.Token) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)

	Name	Description
 	PollAdsStateAsync(TimeSpan, Cancellation-Token) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceStateAsync(IObservable.Unit., Cancellation-Token) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceStateAsync(TimeSpan, Cancellation-Token) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281].)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , IObservable.Unit. , Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , TimeSpan , Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32. , IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (ISymbol , .Int32. , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. IObservable.Unit. , Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. TimeSpan , Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32. , IObservable.Unit.) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (String , .Int32. , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32. , IObservable.Unit. , Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (ISymbol , .Int32. , TimeSpan , Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32. , IObservable.Unit. , Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (String , .Int32 , TimeSpan , Func.Exception , T .) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAs ync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(U Int32, UInt32, Memory.Byte, UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(U Int32, UInt32, UInt32, Memory.Byte, Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte, Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RepeatedRead(UInt32, UInt32, Memory.Byte, Int32, TimeSpan) [▸ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▸ 1215] .)
	RepeatedRead(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, Func.ResultRead, Boolean.) [▸ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▸ 1215] .)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, CancellationToken) [▸ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▸ 1215] .)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte, Int32, TimeSpan, Func.ResultRead, Boolean, CancellationToken) [▸ 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▸ 1215] .)
	RestartTwinCATAsync [▸ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▸ 3281] .)
	SetAdsState [▸ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▸ 3292] .)
	SetAdsStateAsync [▸ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▸ 3292] .)
	WaitUntilRestarted [▸ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▸ 3281] .)
	WaitUntilRestartedAsync [▸ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▸ 3281] .)
 	WhenAdsStateChanges [▸ 1261]	Gets an observable sequence of AdsState [▸ 729] s. (Defined by AdsClientExtensions [▸ 1249] .)
	WhenNotification(ISymbol) [▸ 1263]	Overloaded. Gets an observable sequence of Notification [▸ 1100] s. (Defined by AdsClientExtensions [▸ 1249] .)
 	WhenNotification(ISymbolCollection) [▸ 1264]	Overloaded. Gets an observable sequence of Notification [▸ 1100] objects. (Defined by AdsClientExtensions [▸ 1249] .)

	Name	Description
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges. [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.31.2.1 IAdsConnectAddress.Connect Method

Overload List

	Name	Description
	Connect. [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	Connect(AmsAddress) [▶ 873]	Connects the target ADS Device.
	Connect(Int32) [▶ 873]	Connects to the local target ADS Device.
	Connect(AmsNetId, Int32) [▶ 874]	Connects to the target ADS Device.
	Connect(String, Int32) [▶ 874]	Connects to the target ADS Device.

Reference

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.31.2.1.1 IAdsConnectAddress.Connect Method (Int32)

Connects to the local target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Connect (
    int port
)
```

Parameters

port	Type: System.Int32 The port number of the local ADS target device to connect to.
------	---

Reference

[IAdsConnectAddress Interface](#) [[▶ 835](#)]

[Connect Overload](#) [[▶ 873](#)]

6.2.31.2.1.2 IAdsConnectAddress.Connect Method (AmsAddress)

Connects the target ADS Device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Connect (
    AmsAddress address
)
```

Parameters

address	Type: TwinCAT.Ads.AmsAddress [► 752] The address of the target device.
---------	---

Reference

6.2.31.2.1.3 IAdsConnectAddress.Connect Method (String, Int32)

Connects to the target ADS Device.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Connect (
    string netId,
    int port
)
```

Parameters

netId	Type: System.String The AmsNetId [► 767] of the ADS target device specified as string.
port	Type: System.Int32 The port number of the ADS target device.

6.2.31.2.1.4 IAdsConnectAddress.Connect Method (AmsNetId, Int32)

Connects to the target ADS Device.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Connect(
    AmsNetId netId,
    int port
)
```

Parameters

netId	Type: TwinCAT.Ads.AmsNetId [▶ 767] The AmsNetId of the target device.
port	Type: System.Int32 The Ams Port number on the target device to connect to.

6.2.31.3 IAdsConnectAddress Events

The [IAdsConnectAddress](#) [▶ 835] type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionC hanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
 	ConnectionStateCha nged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Reference

[IAdsConnectAddress Interface](#) [▶ 835]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.32 IAdsConnection Interface

ADS Connection interface

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsConnection : IConnection,
    IConnectionStateProvider, IAdsNotifications, IAdsSymbolicAccess, IAdsAnyAccess, IAdsHandle,
    IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider, IAdsStateControl, IAdsSymbolChangedProvider,
    IAdsRpcInvoke
```

The IAdsConnection type exposes the following members.

Properties

	Name	Description
	Address [► 895]	Gets the AmsAddress [► 752] of the ADS server.
	ClientAddress [► 895]	Get the AmsAddress [► 752] of the ADS client.
 	ConnectionState [► 90]	Gets the current Connection state of the IConnectionStateProvider [► 89] (Inherited from IConnectionStateProvider [► 89].)
	DefaultValueEncoding [► 81]	Gets the default value encoding. (Inherited from IConnection [► 79].)
	Id [► 81]	Gets the Connection Identifier . (Inherited from IConnection [► 79].)
	IsConnected [► 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [► 79].)
	IsLocal [► 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	Session [► 82]	Gets the session that initiated this IConnection [► 79] (Inherited from IConnection [► 79].)
	Timeout [► 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [► 79].)

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [► 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotification(UInt32, UInt32,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [► 966].)

	Name	Description
	Int32, NotificationSettings, Object) [▶ 972]	
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationTok en) [▶ 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationTok en) [▶ 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationTok en) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32, CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
 	InvokeRpcMethodAsync(String, String, .Object, CancellationToken) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationToken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
	InvokeRpcMethodAsync(String,	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)

	Name	Description
	String, .Object, .Any TypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	
	Read(UInt32, Memory.Byte.) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)
	Read(UInt32, UInt32, Memory.Byte.) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, .Int32.) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T. (UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt 32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt 32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt 32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt 32, UInt32,	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	Type, .Int32., CancellationToken) [▶ 823]	
	ReadAnyAsync.T. (UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, .Int32., CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, .Int32., CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt 32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt 32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsyn c(UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsyn c(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	ReadAsync(UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server.
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte)	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	yte, CancellationToken) [► 961]	
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [► 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [► 995].)
	RegisterAdsStateChangedAsync [► 1059]	Registers for AdsStateChanged [► 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [► 1056].)
	RegisterSymbolVersionChanged [► 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [► 1061].)
	RegisterSymbolVersionChangedAsync [► 1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [► 1061].)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [► 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [► 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32, UInt32.) [► 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32, UInt32.) [► 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)
	TryCreateVariableHandle [► 961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [► 954].)

	Name	Description
	TryDeleteDeviceNotification [▶ 990]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	TryDeleteVariableHandle [▶ 962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1031]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995].)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056].)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32.) [▶ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(StateInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T.(ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T.(String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolV ersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	UnregisterSymbolV ersionChangedAsyn c [▶ 1063]	Unregisters the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)
	Write(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, CancellationTok en) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, .Int32, CancellationTok en) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, UInt32, Object, CancellationTok en) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	WriteAnyAsync(UInt32, UInt32, Object, Int32, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAsync(UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControl(StateInfo, ReadOnlyMemory.Byte) [▶ 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.Byte, CancellationToken) [▶ 1047]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionChanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
 	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

Extension Methods

	Name	Description
 	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)

	Name	Description
 	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(TimeSpan, Cancellation.Token) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	PollDeviceStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollDeviceStateAsync(TimeSpan, Cancellation.Token) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281] .)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281] .)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, .Int32., TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)

	Name	Description
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, IObservable.Unit., Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, TimeSpan, Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, .Int32., IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , .Int32 , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit, Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan, Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit .) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)

	Name	Description
	ReadSysServStateAsync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(UInt32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RepeatedReadAsync (UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [1215].)
	RestartTwinCATAsync [3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
	SetAdsState [3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	SetAdsStateAsync [3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	WaitUntilRestarted [3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [3281].)
	WaitUntilRestartedAsync [3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
 	WhenAdsStateChanges [1261]	Gets an observable sequence of AdsState [729]s. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol) [1263]	Overloaded. Gets an observable sequence of Notification [1100]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(ISymbolCollection) [1264]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [1268]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol, NotificationSettings) [1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [1331]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(STRING, Type, NotificationSettings) [1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)
 	WhenNotification.T.(String, NotificationSettings) [1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)

	Name	Description
	WhenSymbolVersionChanges [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

Remarks

The ADS connection interface represents the the logical point-to-point exception between Client and Server within an ADS Session.

6.2.32.1 IAdsConnection Properties

The [IAdsConnection](#) [[▶ 876](#)] type exposes the following members.

Properties

	Name	Description
	Address [▶ 895]	Gets the AmsAddress [▶ 752] of the ADS server.

	Name	Description
	ClientAddress [▶ 895]	Get the AmsAddress [▶ 752] of the ADS client.
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89] .)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding. (Inherited from IConnection [▶ 79] .)
	Id [▶ 81]	Gets the Connection Identifier . (Inherited from IConnection [▶ 79] .)
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [▶ 79] .)
	IsLocal [▶ 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.
	Session [▶ 82]	Gets the session that initiated this IConnection [▶ 79] (Inherited from IConnection [▶ 79] .)
	Timeout [▶ 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [▶ 79] .)

6.2.32.2 IAdsConnection Methods

The [IAdsConnection](#) [► 876] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [► 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [► 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationAsync(String,	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)

	Name	Description
	Int32 , NotificationSettings , Object , CancellationToken) [▶ 974]	
	AddDeviceNotificationAsync (UInt32 , UInt32 , Int32 , NotificationSettings , Object , CancellationToken) [▶ 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx (String , NotificationSettings , Object , Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx (String , NotificationSettings , Object , Type , .Int32 .) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx (UInt32 , UInt32 , NotificationSettings , Object , Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx (UInt32 , UInt32 , NotificationSettings , Object , Type , .Int32 .) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync (String , NotificationSettings , Object , Type , .Int32 , CancellationToken) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync (UInt32 , UInt32 , NotificationSettings , Object , Type , .Int32 , CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
 	InvokeRpcMethodAsync(String, String, Object, CancellationToken) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(IRpcCallableObject, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
	Read(UInt32, Memory.Byte) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	Read(UInt32, UInt32, Memory.Byte.) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, .Int32.) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAnyAsync.T. (UInt32, Int32, CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, Int32, CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString (UInt32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString (UInt32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync (UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync (UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync (UInt32, Memory.Byte, CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	ReadAsync (UInt32, UInt32, Memory.Byte, CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server.
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server.

	Name	Description
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.B	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▶ 995].)

	Name	Description
	yte, CancellationToken [▶ 997]	
	RegisterAdsStateCh angedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	RegisterSymbolVers ionChanged [▶ 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	RegisterSymbolVers ionChangedAsync [▶ 1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	TryAddDeviceNotifi cation(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotifi cation(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotifi cationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotifi cationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryCreateVariableH andle [▶ 961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	TryDeleteDeviceNot ification [▶ 990]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	TryDeleteVariableHa ndle [▶ 962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, Object, Object, Object.) [▶ 1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1031]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995].)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056].)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	TryReadValue.T. (ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T. (String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(StateInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (ISymbol, T.) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (String, T.) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	UnregisterAdsStateChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolVersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)

	Name	Description
	UnregisterSymbolVersionChangedAsynchronous [▶ 1063]	Unregisters the symbol version changed asynchronous. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory<Byte>) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)
	Write(UInt32, UInt32, ReadOnlyMemory<Byte>) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, Int32) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object, Int32) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, Int32, CancellationToken) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, Int32, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	WriteAsync(UInt32, ReadOnlyMemory<Byte>, CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory<Byte>, CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControl(StateInfo, ReadOnlyMemory<Byte>) [▶ 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory<Byte>, CancellationToken) [▶ 1047]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	WriteValueAsync.T. (ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T. (String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(IObservable.Unit., CancellationToken) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2Async(TimeSpan, CancellationToken) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsStateAsync(IObservable.Unit., CancellationToken) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)

	Name	Description
	PollAdsStateAsync(IObservable.Unit., CancellationToken) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsStateAsync(TimeSpan, CancellationToken) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceStateAsync(IObservable.Unit., CancellationToken) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollDeviceStateAsync(TimeSpan, CancellationToken) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281].)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32, TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , IObservable.Unit. , Func.Exception , T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , TimeSpan , Func.Exception , T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32. , IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (ISymbol , .Int32. , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. IObservable.Unit. , Func.Exception , T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String. TimeSpan , Func.Exception , T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32. , IObservable.Unit.) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T. (String , .Int32. , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32. , IObservable.Unit. , Func.Exception , T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , .Int32 , TimeSpan , Func.Exception , T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit , Func.Exception , T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan , Func.Exception , T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAs ync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(U Int32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(U Int32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAs ync(UInt32, UInt32, UInt32, Memory.Byte., CancellationTok en) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [▶ 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RestartTwinCATAsync [▶ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	SetAdsState [▶ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	SetAdsStateAsync [▶ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	WaitUntilRestarted [▶ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▶ 3281].)
	WaitUntilRestartedAsync [▶ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	WhenNotification(ISymbol) [▶ 1263]	Overloaded. Gets an observable sequence of Notification [▶ 1100]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(ISymbolCollection) [▶ 1264]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification.T.(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges . [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.32.2.1 IAdsConnection.ReadDeviceInfo Method

Reads the identification and version number of an ADS server.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
DeviceInfo ReadDeviceInfo ()
```

Return Value

Type: [DeviceInfo](#) [▶ 801]

DeviceInfo struct containing the name of the device and the version information.

Reference

[IAdsConnection Interface](#) [▶ 876]

6.2.32.2.2 IAdsConnection.ReadDeviceInfoAsync Method

Reads the identification and version number of an ADS server.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultDeviceInfo> ReadDeviceInfoAsync (
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken The cancellation token.
--------	---

Return Value

Type: [Task.ResultDeviceInfo](#) [▶ 1132].

A task that represents the asynchronous 'ReadDeviceState' operation. The [ResultDeviceInfo](#) [▶ 1132] parameter contains the value [DeviceInfo](#) [▶ 1134] and the [ErrorCode](#) [▶ 1120] of the ADS communication after execution.

6.2.32.3 IAdsConnection Events

The [IAdsConnection](#) [▶ 876] type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionC hanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
 	ConnectionStateCha nged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

able
```

The [IAdsDisposableConnection](#) type exposes the following members.

Properties

	Name	Description
	Address [▶ 895]	Gets the AmsAddress [▶ 752] of the ADS server. (Inherited from IAdsConnection [▶ 876].)
	ClientAddress [▶ 895]	Get the AmsAddress [▶ 752] of the ADS client. (Inherited from IAdsConnection [▶ 876].)
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding. (Inherited from IConnection [▶ 79].)
	Id [▶ 81]	Gets the Connection Identifier . (Inherited from IConnection [▶ 79].)
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [▶ 79].)
	IsDisposed [▶ 935]	Gets a value indicating whether this instance is disposed.
	IsLocal [▶ 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection [▶ 876].)
	Session [▶ 82]	Gets the session that initiated this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Timeout [▶ 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [▶ 79].)

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [▶ 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationTokens) [▶ 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationAsync(UInt32, UInt32, Int32,	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	NotificationSettings, Object, CancellationToken [▶ 975]	
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect . [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)

	Name	Description
	Connect(AmsAddress) [▶ 873]	Connects the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(Int32) [▶ 873]	Connects to the local target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(AmsNetId, Int32) [▶ 874]	Connects to the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(String, Int32) [▶ 874]	Connects to the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
	Dispose	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from IDisposable.)
 	InvokeRpcMethodAsync(String, String, Object, CancellationToken) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier) [▶ 1021]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)

	Name	Description
	AnyTypeSpecifier, CancellationToken [▶ 1022]	
	Read(UInt32, Memory.Byte.) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)
	Read(UInt32, UInt32, Memory.Byte.) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, .Int32.) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32,	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	Type, .Int32., CancellationToken) [▶ 823]	
	ReadAnyAsync.T. (UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, .Int32., CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T. (UInt32, UInt32, .Int32., CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt 32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt 32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsyn c(UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsyn c(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	ReadAsync(UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)
	ReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte.) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UInt32, Memory.Byte, ReadOnlyMemory.Byte)	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	yte, CancellationToken) [▶ 961]	
	ReadWriteAsync(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, CancellationToken) [▶ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▶ 995].)
	RegisterAdsStateChangedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	RegisterSymbolVersionChanged [▶ 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	RegisterSymbolVersionChangedAsync [▶ 1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32, UInt32.) [▶ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32, UInt32.) [▶ 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryCreateVariableHandle [▶ 961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)

	Name	Description
	TryDeleteDeviceNotification [▶ 990]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	TryDeleteVariableHandle [▶ 962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1031]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
	TryRead(UInt32, Memory.Byte, Int32.) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	TryRead(UInt32, UInt32, Memory.Byte, Int32.) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995].)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056].)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadWrite(UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryReadWrite(UInt32, UInt32, Memory.Byte, ReadOnlyMemory.Byte, Int32.) [▶ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(StateInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T.(ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T.(String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolV ersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	UnregisterSymbolV ersionChangedAsyn c [▶ 1063]	Unregisters the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)
	Write(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, CancellationTok en) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, Object, .Int32, CancellationTok en) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt 32, UInt32, Object, CancellationTok en) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	WriteAnyAsync(UInt32, UInt32, Object, Int32, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAsync(UInt32, ReadOnlyMemory.BYTE, CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.BYTE, CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControl(StateInfo, ReadOnlyMemory.BYTE) [▶ 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.BYTE, CancellationToken) [▶ 1047]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol.The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

Events

	Name	Description
	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionChanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)
	RouterStateChange [▶ 1100]	(Local) Router state changed event. (Inherited from IRouterNotificationProvider [▶ 1099].)

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
 	PollAdsState(TimeSpan) [▸ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsState(TimeSpan) [▸ 1257]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2(IObservable.Unit.) [▸ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2(TimeSpan) [▸ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2Async(IObservable.Unit., Cancellation.Token) [▸ 1274]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsState2Async(TimeSpan, Cancellation.Token) [▸ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▸ 1146]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 3296]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsStateAsync(IObservable.Unit., Cancellation.Token) [▸ 1259]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 3298]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by ConnectionStateExtension [▸ 3292].)
 	PollAdsStateAsync(TimeSpan, Cancellation.Token) [▸ 1260]	Overloaded. Gets an observable sequence of AdsState [▸ 729]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollDeviceState(IObservable.Unit.) [▸ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▸ 1157]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)
 	PollDeviceState(TimeSpan) [▸ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▸ 1157]s via Polling. (Defined by AdsClientExtensions [▸ 1249].)

	Name	Description
	PollDeviceStateAsync(IObservable.Unit., Cancellation.Token) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollDeviceStateAsync(TimeSpan, Cancellation.Token) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157] s via Polling. (Defined by AdsClientExtensions [▶ 1249] .)
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281] .)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281] .)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, .Int32., TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281] .)
	PollValues(String, Type, IObservable.Unit., Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281] .)

	Name	Description
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, IObservable.Unit., Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, TimeSpan, Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol, .Int32., IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T. (ISymbol , .Int32 , TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit, Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan, Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit .) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (ISymbol , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , IObservable.Unit , Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T. (String , .Int32 , TimeSpan , Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (ISymbol , .Int32 , IObservable.Unit .) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T. (String , .Int32 , IObservable.Unit .) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)

	Name	Description
	ReadSysServStateAsync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(UInt32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallback(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RepeatedReadAsync (UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [1215].)
	RestartTwinCATAsync [3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
	SetAdsState [3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	SetAdsStateAsync [3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [3292].)
	WaitUntilRestarted [3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [3281].)
	WaitUntilRestartedAsync [3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [3281].)
 	WhenAdsStateChanges [1261]	Gets an observable sequence of AdsState [729]s. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol) [1263]	Overloaded. Gets an observable sequence of Notification [1100]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(ISymbolCollection) [1264]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [1268]	Overloaded. Gets an observable sequence of Notification [1100] objects. (Defined by AdsClientExtensions [1249].)
	WhenNotification(ISymbol, NotificationSettings) [1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [1331]s. (Defined by AdsClientExtensions [1249].)
 	WhenNotification(String, Type, NotificationSettings) [1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)
 	WhenNotification.T.(String, NotificationSettings) [1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [1281].)

	Name	Description
	WhenSymbolVersionChanges [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)
 	WriteValues.T.(String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T.(String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.33.1 IAdsDisposableConnection Properties

The [IAdsDisposableConnection](#) [[▶ 915](#)] type exposes the following members.

Properties

	Name	Description
	Address [▶ 895]	Gets the AmsAddress [▶ 752] of the ADS server. (Inherited from IAdsConnection [▶ 876].)
	ClientAddress [▶ 895]	Get the AmsAddress [▶ 752] of the ADS client. (Inherited from IAdsConnection [▶ 876].)
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	DefaultValueEncoding [▶ 81]	Gets the default value encoding. (Inherited from IConnection [▶ 79].)
	Id [▶ 81]	Gets the Connection Identifier . (Inherited from IConnection [▶ 79].)

	Name	Description
	IsConnected [▶ 82]	Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method <code>ReadState</code> to determine if the target port is available. (Inherited from IConnection [▶ 79].)
	IsDisposed [▶ 935]	Gets a value indicating whether this instance is disposed.
	IsLocal [▶ 896]	Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection [▶ 876].)
	Session [▶ 82]	Gets the session that initiated this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Timeout [▶ 83]	Gets the timeout (in milliseconds) (Inherited from IConnection [▶ 79].)

Reference

[IAdsDisposableConnection Interface](#) [[▶ 915](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.33.1 IAdsDisposableConnection.IsDisposed Property

Gets a value indicating whether this instance is disposed.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
bool IsDisposed { get; }
```

Property Value

Type: [Boolean](#)

true if this instance is disposed; otherwise, false.

6.2.33.2 IAdsDisposableConnection Methods

The [IAdsDisposableConnection](#) [[▶ 915](#)] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [► 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [► 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [► 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [► 991] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [► 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [► 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [► 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [► 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [► 966].)
	AddDeviceNotificationExAsync(String, NotificationSettings,	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [► 993] event. (Inherited from IAdsNotifications [► 966].)

	Name	Description
	Object, Type, .Int32., CancellationToken [▶ 981]	
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	Close [▶ 83]	Closes this IConnection [▶ 79] (Inherited from IConnection [▶ 79].)
	Connect. [▶ 84]	(Re)Connects the IConnection [▶ 79] when disconnected. (Inherited from IConnection [▶ 79].)
	Connect(AmsAddress) [▶ 873]	Connects the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(Int32) [▶ 873]	Connects to the local target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(AmsNetId, Int32) [▶ 874]	Connects to the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	Connect(String, Int32) [▶ 874]	Connects to the target ADS Device. (Inherited from IAdsConnectAddress [▶ 835].)
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [▶ 966].)
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [▶ 954].)
	Disconnect [▶ 84]	Disconnects this IConnection [▶ 79]. (Inherited from IConnection [▶ 79].)
	Dispose	Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from IDisposable .)
	InvokeRpcMethodAsync(String,	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)

	Name	Description
	String, .Object, CancellationTok en) [▶ 1021]	
 	InvokeRpcMethodA sync(IRpcCallablIns tance, IRpcMethod, .Objec t, .AnyTypeSpecifier , .AnyTypeSpecifier, CancellationToken) [▶ 1024]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
 	InvokeRpcMethodA sync(String, String, .Object, .Any TypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke [▶ 1012].)
	Read(UInt32, Memory.Byte.) [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer. (Inherited from IAdsHandle [▶ 954].)
	Read(UInt32, UInt32, Memory.Byte.) [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadAny(UInt32, Type) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, Type, .Int32.) [▶ 813]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny(UInt32, UInt32, Type, .Int32.) [▶ 815]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32) [▶ 810]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T. (UInt32, .Int32.) [▶ 811]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32) [▶ 812]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAny.T.(UInt32, UInt32, .Int32.) [▶ 814]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAnyAsync(UInt32, Type, CancellationToken) [▶ 819]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [▶ 821]	Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [▶ 823]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, CancellationToken) [▶ 817]	Reads data asynchronously from an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, .Int32., CancellationToken) [▶ 818]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, UInt32, CancellationToken) [▶ 820]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyAsync.T.(UInt32, UInt32, .Int32., CancellationToken) [▶ 822]	Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt32, Int32, Encoding) [▶ 825]	Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyString(UInt32, UInt32, Int32, Encoding) [▶ 825]	Reads as string from a specified address. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string asynchronously from the specified symbol/variable (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [▶ 827]	Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess [▶ 804].)
	ReadAsync(UInt32, Memory.Byte., CancellationToken) [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	ReadAsync(UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▶ 995].)
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadDeviceInfo [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadDeviceInfoAsync [▶ 914]	Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [▶ 876].)
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [▶ 1056].)
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)

	Name	Description
	ReadValueAsync.T. (String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	ReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.B yte.) [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target. (Inherited from IAdsHandle [▶ 954].)
	ReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.B yte.) [▶ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer (Inherited from IAdsReadWrite2 [▶ 1000].)
	ReadWriteAsync(UIn t32, Memory.Byte., ReadOnlyMemory.B yte, CancellationToken) [▶ 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	ReadWriteAsync(UIn t32, UInt32, Memory.Byte., ReadOnlyMemory.B yte, CancellationToken) [▶ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▶ 995].)
	RegisterAdsStateCh angedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	RegisterSymbolVers ionChanged [▶ 1064]	Registers the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	RegisterSymbolVers ionChangedAsync [▶ 1062]	Registers the symbol version changed asynchronously. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	TryAddDeviceNotifi cation(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotifi cation(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event. (Inherited from IAdsNotifications [▶ 966].)

	Name	Description
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event. (Inherited from IAdsNotifications [▶ 966].)
	TryCreateVariableHandle [▶ 961]	Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [▶ 954].)
	TryDeleteDeviceNotification [▶ 990]	Deletes a registered notification. (Inherited from IAdsNotifications [▶ 966].)
	TryDeleteVariableHandle [▶ 962]	Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [▶ 954].)
 	TryInvokeRpcMethod(String, String, .Object, Object.) [▶ 1026]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, .Object, .Object, Object.) [▶ 1028]	Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, .Object, Object.) [▶ 1031]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)
 	TryInvokeRpcMethod(String, String, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, .Object, Object.) [▶ 1030]	Invokes the rpc method. (Inherited from IAdsRpcInvoke [▶ 1012].)

	Name	Description
	TryRead(UInt32, Memory.Byte., Int32.) [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer. (Inherited from IAdsHandle [▶ 954].)
	TryRead(UInt32, UInt32, Memory.Byte., Int32.) [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▶ 995].)
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from IAdsStateProvider [▶ 1056].)
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadValue.T.(String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryReadWrite(UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryReadWrite(UInt32, UInt32, Memory.Byte., ReadOnlyMemory.Byte., Int32.) [▶ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWrite(UInt32, ReadOnlyMemory.Byte.) [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle. (Inherited from IAdsHandle [▶ 954].)
	TryWrite(UInt32, UInt32, ReadOnlyMemory.Byte.) [▶ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▶ 995].)
	TryWriteControl(StateInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)

	Name	Description
	TryWriteControl(Sta telInfo, ReadOnlyMemory.B yte.) [▶ 1043]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	TryWriteValue(ISym bol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue(Strin g, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	TryWriteValue.T. (String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation. (Inherited from IAdsStateProvider [▶ 1056].)
	UnregisterSymbolV ersionChanged [▶ 1064]	Unregisters the symbol version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	UnregisterSymbolV ersionChangedAsyn c [▶ 1063]	Unregisters the symbol version changed asynchronous. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
	Write(UInt32, ReadOnlyMemory.B yte.) [▶ 964]	Writes data synchronously to an ADS device. (Inherited from IAdsHandle [▶ 954].)
	Write(UInt32, UInt32) [▶ 1003]	Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [▶ 1000].)
	Write(UInt32, UInt32, ReadOnlyMemory.B yte.) [▶ 1004]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite2 [▶ 1000].)
	WriteAny(UInt32, Object) [▶ 829]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, Object, .Int32.) [▶ 829]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAny(UInt32, UInt32, Object) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)

	Name	Description
	WriteAny(UInt32, UInt32, Object, .Int32.) [▶ 830]	Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, CancellationToken) [▶ 832]	Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, Object, .Int32, CancellationToken) [▶ 833]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAnyAsync(UInt32, UInt32, Object, .Int32, CancellationToken) [▶ 834]	Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [▶ 804].)
	WriteAsync(UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle. (Inherited from IAdsHandle [▶ 954].)
	WriteAsync(UInt32, UInt32, ReadOnlyMemory.Byte, CancellationToken) [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▶ 995].)
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControl(StateInfo, ReadOnlyMemory.Byte.) [▶ 1045]	Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)
	WriteControlAsync(AdsState, UInt16,	Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [▶ 1039].)

	Name	Description
	ReadOnlyMemory.Byte, CancellationToken [▶ 1047]	
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)
	WriteValueAsync.T.(String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [▶ 1065].)

Extension Methods

	Name	Description
	PollAdsState(IObservable.Unit.) [▶ 3294]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(IObservable.Unit.) [▶ 1256]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState(TimeSpan) [▶ 3295]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
	PollAdsState(TimeSpan) [▶ 1257]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
	PollAdsState2(IObservable.Unit.) [▶ 1271]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
 	PollAdsState2(TimeSpan) [▶ 1272]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2Async(IObservable.Unit., CancellationTokens) [▶ 1274]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsState2Async(TimeSpan, CancellationTokens) [▶ 1275]	Overloaded. Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(IObservable.Unit., CancellationTokens) [▶ 3296]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(IObservable.Unit., CancellationTokens) [▶ 1259]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollAdsStateAsync(TimeSpan, CancellationTokens) [▶ 3298]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by ConnectionStateExtension [▶ 3292].)
 	PollAdsStateAsync(TimeSpan, CancellationTokens) [▶ 1260]	Overloaded. Gets an observable sequence of AdsState [▶ 729]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceState(IObservable.Unit.) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceState(TimeSpan) [▶ 1276]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceStateAsync(IObservable.Unit., CancellationTokens) [▶ 1278]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)
 	PollDeviceStateAsync(TimeSpan, CancellationTokens) [▶ 1279]	Overloaded. Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling. (Defined by AdsClientExtensions [▶ 1249].)

	Name	Description
	PollSystemServiceState [▶ 3282]	Polls the state of the system service. (Defined by SystemServiceExtension [▶ 3281].)
	PollSystemServiceStateAsync [▶ 3283]	Polls the system service state asynchronously (Defined by SystemServiceExtension [▶ 3281].)
	PollValues(ISymbol, Type, IObservable.Unit.) [▶ 1310]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan) [▶ 1311]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit.) [▶ 1300]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan) [▶ 1301]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., TimeSpan) [▶ 1316]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, TimeSpan, Func.Exception, Object.) [▶ 1317]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan) [▶ 1304]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, IObservable.Unit, Func.Exception, Object.) [▶ 1305]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, TimeSpan, Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(ISymbol, Type, .Int32., IObservable.Unit, Func.Exception, Object.) [▶ 1321]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues(ISymbol, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1322]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., IObservable.Unit., Func.Exception, Object.) [▶ 1306]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues(String, Type, .Int32., TimeSpan, Func.Exception, Object.) [▶ 1307]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit.) [▶ 1308]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan) [▶ 1309]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit.) [▶ 1294]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, TimeSpan) [▶ 1295]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, IObservable.Unit., Func.Exception, T.) [▶ 1314]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, TimeSpan, Func.Exception, T.) [▶ 1315]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32., IObservable.Unit.) [▶ 1312]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(ISymbol, .Int32., TimeSpan) [▶ 1313]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, IObservable.Unit., Func.Exception, T.) [▶ 1298]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)

	Name	Description
	PollValues.T.(String, TimeSpan, Func.Exception, T.) [▶ 1299]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, .Int32., IObservable.Unit.) [▶ 1296]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(String, .Int32., TimeSpan) [▶ 1297]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(ISymbol, .Int32., IObservable.Unit., Func.Exception, T.) [▶ 1318]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(ISymbol, .Int32., TimeSpan, Func.Exception, T.) [▶ 1319]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues.T.(String, .Int32., IObservable.Unit., Func.Exception, T.) [▶ 1302]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
 	PollValues.T.(String, .Int32., TimeSpan, Func.Exception, T.) [▶ 1303]	Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T.(ISymbol, .Int32., IObservable.Unit.) [▶ 1330]	Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	PollValues2.T.(String, .Int32., IObservable.Unit.) [▶ 1329]	Overloaded. Polls the symbol values on time points where the polling observable streams data / triggers (Defined by AnyTypeExtensions [▶ 1281].)
	ReadSysServState [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (Defined by SystemServiceExtension [▶ 3281].)
	ReadSysServStateAsync [▶ 3284]	Reads the System Service state (AdsSysServState [▶ 3275]) (asynchronous) (Defined by SystemServiceExtension [▶ 3281].)
	ReadWithFallback(UInt32, UInt32, Memory.Byte., UInt32, Boolean.) [▶ 1219]	Overloaded. Ads Read with fallback. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	ReadWithFallback(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.) [▶ 1220]	Overloaded. Ads Read with Fallback. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., CancellationToken) [▶ 1221]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	ReadWithFallbackAsync(UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., CancellationToken) [▶ 1222]	Overloaded. Ads Read with fallback as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan) [▶ 1224]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedRead(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean.) [▶ 1225]	Overloaded. Repeated AdsRead. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, CancellationToken) [▶ 1226]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)
	RepeatedReadAsync(UInt32, UInt32, Memory.Byte., Int32, TimeSpan, Func.ResultRead, Boolean., CancellationToken) [▶ 1227]	Overloaded. Repeated AdsRead as an asynchronous operation. (Defined by AdsClientExtensions [▶ 1215].)

	Name	Description
	RestartTwinCATAsync [▶ 3285]	Sends a SystemService Restart to the target system and waits until the system has finished the state changes (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
	SetAdsState [▶ 3299]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	SetAdsStateAsync [▶ 3300]	Sets an AdsState/AdsStateCommand to an AdsServer and waits until the StateChange finishes. (Defined by ConnectionStateExtension [▶ 3292].)
	WaitUntilRestarted [▶ 3286]	Waits until the Restart is detected on the client (SystemService, Port 10000) (Defined by SystemServiceExtension [▶ 3281].)
	WaitUntilRestartedAsync [▶ 3287]	Waits until the SystemService Restart is detected on the client (SystemService, Port 10000) (asynchronously) (Defined by SystemServiceExtension [▶ 3281].)
 	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol) [▶ 1263]	Overloaded. Gets an observable sequence of Notification [▶ 1100]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(ISymbolCollection) [▶ 1264]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(IList.ISymbol, NotificationSettings) [▶ 1268]	Overloaded. Gets an observable sequence of Notification [▶ 1100] objects. (Defined by AdsClientExtensions [▶ 1249].)
	WhenNotification(ISymbol, NotificationSettings) [▶ 1265]	Overloaded. Gets an observable sequence of SymbolValueNotification [▶ 1331]s. (Defined by AdsClientExtensions [▶ 1249].)
 	WhenNotification(String, Type, NotificationSettings) [▶ 1324]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
 	WhenNotification(String, NotificationSettings) [▶ 1323]	Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by AnyTypeExtensions [▶ 1281].)
	WhenSymbolVersionChanges [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenSymbolVersionChanges(IScheduler) [▶ 1270]	Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by AdsClientExtensions [▶ 1249].)
	WhenValueChanged [▶ 1345]	Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by ValueSymbolExtensions [▶ 1333].)

	Name	Description
		
 	WriteValues.T. (String, IObservable.T.) [▶ 1326]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)
 	WriteValues.T. (String, IObservable.T., Action.Exception.) [▶ 1327]	Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by AnyTypeExtensions [▶ 1281].)

6.2.33.3 IAdsDisposableConnection Events

The [IAdsDisposableConnection](#) [▶ 915] type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [▶ 966].)
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [▶ 966].)
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [▶ 1056].)
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [▶ 966].)
	AdsSymbolVersionC hanged [▶ 1065]	Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [▶ 1061].)
 	ConnectionStateCha nged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)
	RouterStateChange d [▶ 1100]	(Local) Router state changed event. (Inherited from IRouterNotificationProvider [▶ 1099].)

6.2.34 IAdsHandle Interface

Interface for ADS access via variable handle

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsHandle
```

The IAdsHandle type exposes the following members.

Methods

	Name	Description
	CreateVariableHandle [► 956]	Determines the Symbol handle by its instance path synchronously.
	CreateVariableHandleAsync [► 956]	Determines the Symbol handle by its instance path asynchronously.
	DeleteVariableHandle [► 957]	Releases the specified symbol/variable handle synchronously.
	DeleteVariableHandleAsync [► 958]	Releases the specified symbol/variable handle asynchronously.
	Read [► 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer.
	ReadAsync [► 959]	Reads the value data of the symbol asynchronously into the readBuffer.
	ReadWrite [► 960]	Writes data synchronously to an ADS device and then Reads data from that target.
	ReadWriteAsync [► 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	TryCreateVariableHandle [► 961]	Determines the Symbol handle by its instance path synchronously.
	TryDeleteVariableHandle [► 962]	Releases the specified symbol/variable handle synchronously.
	TryRead [► 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryReadWrite [► 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryWrite [► 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.

	Name	Description
	Write [▶ 964]	Writes data synchronously to an ADS device.
	WriteAsync [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.

6.2.34.1 IAdsHandle Methods

The [IAdsHandle \[▶ 954\]](#) type exposes the following members.

Methods

	Name	Description
	CreateVariableHandle [▶ 956]	Determines the Symbol handle by its instance path synchronously.
	CreateVariableHandleAsync [▶ 956]	Determines the Symbol handle by its instance path asynchronously.
	DeleteVariableHandle [▶ 957]	Releases the specified symbol/variable handle synchronously.
	DeleteVariableHandleAsync [▶ 958]	Releases the specified symbol/variable handle asynchronously.
	Read [▶ 959]	Reads data synchronously from an ADS device and writes to the specified readBuffer.
	ReadAsync [▶ 959]	Reads the value data of the symbol asynchronously into the readBuffer.
	ReadWrite [▶ 960]	Writes data synchronously to an ADS device and then Reads data from that target.
	ReadWriteAsync [▶ 961]	ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.
	TryCreateVariableHandle [▶ 961]	Determines the Symbol handle by its instance path synchronously.
	TryDeleteVariableHandle [▶ 962]	Releases the specified symbol/variable handle synchronously.
	TryRead [▶ 963]	Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.
	TryReadWrite [▶ 963]	ReadWrites value data synchronously to/from the symbol represented by the variableHandle.
	TryWrite [▶ 964]	Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.
	Write [▶ 964]	Writes data synchronously to an ADS device.
	WriteAsync [▶ 965]	Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.

Reference

[IAdsHandle Interface](#) [[▶ 954](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.1 IAdsHandle.CreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint CreateVariableHandle(  
    string symbolPath  
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
------------	---

Return Value

Type: [UInt32](#)

The symbols/variable handle

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [CreateVariableHandle\(String\)](#) is the [DeleteVariableHandle\(UInt32\)](#) [[▶ 957](#)]

[IAdsHandle.TryCreateVariableHandle\(String, UInt32.\)](#) [[▶ 961](#)]

6.2.34.1.2 IAdsHandle.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultHandle> CreateVariableHandleAsync(
    string symbolPath,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'CreateVariableHandle' operation. The [ResultHandle](#) [[▶ 1136](#)] parameter contains the variable handle ([Handle](#) [[▶ 1138](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [CreateVariableHandleAsync\(String, CancellationToken\)](#) is the [DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) [[▶ 958](#)]

Reference

[IAdsHandle.CreateVariableHandle\(String\)](#) [[▶ 956](#)]

6.2.34.1.3 IAdsHandle.DeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
void DeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
----------------	---

Return Value

Type:
The ADS error code.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [TryDeleteVariableHandle\(UInt32\)](#) [► 962] is the [TryCreateVariableHandle\(String, UInt32.\)](#) [► 961]

6.2.34.1.4 IAdsHandle.DeleteVariableHandleAsync Method

Releases the specified symbol/variable handle asynchronously.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
Task<ResultAds> DeleteVariableHandleAsync (
    uint variableHandle,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [► 1116].

A task that represents the asynchronous 'DeleteVariableHandle' operation. The [ResultAds](#) [► 1116] parameter contains the [ErrorCode](#) [► 1120] after execution.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this [DeleteVariableHandleAsync\(UInt32, CancellationToken\)](#) is the [CreateVariableHandleAsync\(String, CancellationToken\)](#) [► 956]

[IAdsHandle.DeleteVariableHandle\(UInt32\)](#) [► 957]

6.2.34.1.5 IAdsHandle.Read Method

Reads data synchronously from an ADS device and writes to the specified readBuffer.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
int Read(
    uint variableHandle,
    Memory<byte> readBuffer
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
readBuffer	Type: System.Memory.Byte. The read buffer / data

Return Value

Type: [Int32](#)

Number of successfully returned data bytes.

Reference

[IAdsHandle Interface](#) [► 954]

[IAdsHandle.ReadAsync\(UInt32, Memory.Byte., CancellationToken\)](#) [► 959]

6.2.34.1.6 IAdsHandle.ReadAsync Method

Reads the value data of the symbol asynchronously into the readBuffer.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultRead> ReadAsync(
    uint variableHandle,
    Memory<byte> readBuffer,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
readBuffer	Type: System.Memory.Byte . The read buffer/data.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultRead](#) [[▶ 1143](#)].

A task that represents the asynchronous read operation. The [ResultRead](#) [[▶ 1143](#)] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [[▶ 1145](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution..

Reference

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.7 IAdsHandle.ReadWrite Method

Writes data synchronously to an ADS device and then Reads data from that target.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
int ReadWrite(
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer
)
```

Parameters

variableHandle	Type: System.UInt32 Variable handle.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.

Return Value

Type: [Int32](#)

Number of successfully returned data bytes.

6.2.34.1.8 IAdsHandle.ReadWriteAsync Method

ReadWrites value data asynchronously to/from the symbol represented by the variableHandle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultReadWrite> ReadWriteAsync (
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 Variable handle.
readBuffer	Type: System.Memory.Byte . The read data / value
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write data / value.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultReadWrite](#) [[▶ 1163](#)].

A task that represents the asynchronous 'ReadWrite' operation. The [ResultReadWrite](#) [[▶ 1163](#)] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [[▶ 1145](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Reference

[IAdsHandle Interface](#) [[▶ 954](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.9 IAdsHandle.TryCreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryCreateVariableHandle (
    string symbolPath,
    out uint variableHandle
)
```

Parameters

symbolPath	Type: System.String SymbolName / InstancePath.
------------	---

variableHandle	Type: System.UInt32 . The symbols handle.
----------------	--

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `TryCreateVariableHandle(String, UInt32.)` is the `TryDeleteVariableHandle(UInt32)` [[▶ 962](#)]

[IAdsHandle.CreateVariableHandle\(String\)](#) [[▶ 956](#)]

6.2.34.1.10 IAdsHandle.TryDeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax**C#**

```
AdsErrorCode TryDeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
----------------	---

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `TryDeleteVariableHandle(UInt32)` is the `TryCreateVariableHandle(String, UInt32.)` [[▶ 961](#)]

6.2.34.1.11 IAdsHandle.TryRead Method

Reads the value synchronously data of the symbol, that is represented by the variable handle into the readBuffer.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryRead(
    uint variableHandle,
    Memory<byte> readBuffer,
    out int readBytes
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
readBuffer	Type: System.Memory.Byte . The read buffer/data
readBytes	Type: System.Int32 . Number of read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS error code.

Reference

[IAdsHandle Interface](#) [[▶ 954](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.12 IAdsHandle.TryReadWrite Method

ReadWrites value data synchronously to/from the symbol represented by the variableHandle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadWrite(
    uint variableHandle,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    out int readBytes
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
readBuffer	Type: System.Memory.Byte . The read buffer / read data.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer / write data.
readBytes	Type: System.Int32 . Number of read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Reference

[IAdsHandle Interface](#) [[▶ 954](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.13 IAdsHandle.TryWrite Method

Writes the value data synchronously that is represented in the writeBuffer to the symbol with the specified variableHandle.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
AdsErrorCode TryWrite(
    uint variableHandle,
    ReadOnlyMemory<byte> writeBuffer
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer / value.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Reference

[IAdsHandle Interface](#) [[▶ 954](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.34.1.14 IAdsHandle.Write Method

Writes data synchronously to an ADS device.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Write(
    uint variableHandle,
    ReadOnlyMemory<byte> writeBuffer
)
```

Parameters

variableHandle	Type: System.UInt32 Handle of the ADS variable
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer / value to be written

Reference

6.2.34.1.15 IAdsHandle.WriteAsync Method

Writes the value data asynchronously that is represented by the writeBuffer to the symbol specified by the variableHandle.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultWrite> WriteAsync(
    uint variableHandle,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

variableHandle	Type: System.UInt32 The variable handle.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer/value.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [► 1187].

A task that represents the asynchronous write operation. The [ResultWrite](#) [► 1187] parameter contains the [ErrorCode](#) [► 1120] after execution.

Reference

6.2.35 IAdsNotifications Interface

Interface for Notification management.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsNotifications
```

The IAdsNotifications type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [► 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event.
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [► 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [► 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [► 991] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [► 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [► 991] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [► 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [► 993] event.

	Name	Description
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationTokens) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationTokens) [▶ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	DeleteDeviceNotification [▶ 983]	Deletes a registered notification.
	DeleteDeviceNotificationAsync [▶ 984]	Deletes a registered notification asynchronously.
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.

	Name	Description
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▶ 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	TryDeleteDeviceNotification [▶ 990]	Deletes a registered notification.

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management.
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client.
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications)

Reference

6.2.35.1 IAdsNotifications Methods

The [IAdsNotifications](#) [[▶ 966](#)] type exposes the following members.

Methods

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [▶ 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotification(UInt32, UInt32,	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

	Name	Description
	Int32, NotificationSettings, Object) [▶ 972]	
	AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [▶ 974]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [▶ 975]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [▶ 991] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) [▶ 977]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [▶ 978]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.
	AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) [▶ 980]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.
	AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) [▶ 981]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▶ 993] event.

	Name	Description
	AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [▸ 982]	Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [▸ 993] event.
	DeleteDeviceNotification [▸ 983]	Deletes a registered notification.
	DeleteDeviceNotificationAsync [▸ 984]	Deletes a registered notification asynchronously.
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▸ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▸ 991] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▸ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▸ 991] event.
	TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [▸ 988]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▸ 993] event.
	TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.) [▸ 989]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [▸ 993] event.
	TryDeleteDeviceNotification [▸ 990]	Deletes a registered notification.

Reference

[IAdsNotifications Interface](#) [[▸ 966](#)]

6.2.35.1.1 IAdsNotifications.AddDeviceNotification Method

Overload List

	Name	Description
	AddDeviceNotification(String, Int32, NotificationSettings, Object) [► 971]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [► 991] event.
	AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [► 972]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Reference

[IAdsNotifications Interface \[► 966\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.35.1.1.1 IAdsNotifications.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification \[► 991\]](#) event.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint AddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

symbolPath	Type: System.String Symbol / Instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)
The notification handle.

Remarks

The
dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 991](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 983](#)] should always called when the notification is not used anymore.

6.2.35.1.1.2 IAdsNotifications.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

Return Value

Type: [UInt32](#)
 The notification handle.

Remarks

The
 dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 991](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 983](#)] should always called when the notification is not used anymore.

6.2.35.1.2.1 IAdsNotifications.AddDeviceNotificationAsync Method (String, Int32, NotificationSettings, Object, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotification \[► 991\]](#) event.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultHandle> AddDeviceNotificationAsync(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle \[► 1136\]](#).

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle \[► 1136\]](#) type parameter contains the created handle ([Handle \[► 1138\]](#)) and the [ErrorCode \[► 1120\]](#) after execution.

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification \[► 991\]](#) as value. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\) \[► 984\]](#) should always be called when the notification is not used anymore.

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx \[▶ 993\]](#) event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')

Return Value

Type: [UInt32](#)
The notification handle.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\) \[▶ 983\]](#) should always called when the notification is not used anymore.

6.2.35.1.3.2 IAdsNotifications.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx \[▶ 993\]](#) event.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [► 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . Additional arguments (for 'AnyType')

Return Value

Type: [UInt32](#)
The notification handle.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [► 983] should always called when the notification is not used anymore.

6.2.35.1.3.3 IAdsNotifications.AddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [► 993] event.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')

Return Value

Type: [UInt32](#)
The notification handle.

Remarks

xxxxxBecause notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [▶ 983] should always called when the notification is not used anymore. [AddDeviceNotificationEx Overload](#) [▶ 976]

Reference

6.2.35.1.3.4 IAdsNotifications.AddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[] args
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data.
type	Type: System.Type Type of the object stored in the event argument.
args	Type: .System.Int32 . Additional arguments for 'AnyType' types.

Return Value

Type: [UInt32](#)

The notification handle.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [[▶ 983](#)] should always called when the notification is not used anymore.

[TwinCAT.Ads Namespace \[▸ 179\]](#)

6.2.35.1.4.1 IAdsNotifications.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, .Int32., CancellationTok

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx \[▸ 993\]](#) event.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultHandle> AddDeviceNotificationExAsync (
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    CancellationTok
```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▸ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)

type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationTokens The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [[▶ 1136](#)] type parameter contains the created handle ([Handle](#) [[▶ 1138](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationTokens\)](#) [[▶ 984](#)] should always be called when the notification is not used anymore.

6.2.35.1.4.2 IAdsNotifications.AddDeviceNotificationExAsync Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationTokens)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 993](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultHandle> AddDeviceNotificationExAsync (
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    CancellationTokens cancel
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings.
userData	Type: System.Object This object can be used to store user specific data.
type	Type: System.Type Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.
args	Type: .System.Int32 . Additional arguments (for 'AnyType')
cancel	Type: System.Threading.CancellationToken The Cancellation token.

Return Value

Type: [Task.ResultHandle](#) [[▶ 1136](#)].

A task that represents the asynchronous 'AddDeviceNotification' operation. The [ResultHandle](#) [[▶ 1136](#)] type parameter contains the created handle ([Handle](#) [[▶ 1138](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotificationAsync\(UInt32, CancellationToken\)](#) [[▶ 984](#)] should always called when the notification is not used anymore.

6.2.35.1.6 IAdsNotifications.DeleteDeviceNotificationAsync Method

Deletes a registered notification asynchronously.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultAds> DeleteDeviceNotificationAsync(
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

notificationHandle	Type: System.UInt32 Notification handle.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds \[▶ 1116\]](#).

A task that represents the asynchronous 'DeleteDeviceNotification' operation. The [ErrorCode \[▶ 1120\]](#) property contains the ADS error code after execution.

Remarks

This is the complementary method to [AddDeviceNotificationAsync Overload \[▶ 973\]](#) overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

6.2.35.1.7 IAdsNotifications.TryAddDeviceNotification Method

Overload List

	Name	Description
	TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [▶ 985]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.
	TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.) [▶ 986]	Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [▶ 991] event.

Reference

[IAdsNotifications Interface \[▶ 966\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.35.1.7.1 IAdsNotifications.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification \[▶ 991\]](#) event.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

AdsErrorCode TryAddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,

```

```

Object? userData,
out uint handle
)

```

Parameters

symbolPath	Type: System.String The symbol/instance path of the ADS variable.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The notification settings.
userData	Type: System.Object This object can be used to store user specific data.
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS ErrorCode.

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 991](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)] should always be called when the notification is not used anymore.

6.2.35.1.7.2 IAdsNotifications.TryAddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotification](#) [[▶ 991](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object? userData,
    out uint handle
)

```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
dataSize	Type: System.Int32 Maximum amount of data in bytes to receive with this ADS Notification.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Remarks

The

dataSize

Parameter defines the amount of bytes, that will be attached to the [AdsNotification](#) [[▶ 991](#)] as value. Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)] should always called when the notification is not used anymore.

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.35.1.8.1 IAdsNotifications.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 993](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    out uint handle
)
```

Parameters

symbolPath	Type: System.String Symbol/Instance path of the ADS variable.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.
userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . Additional arguments (for 'AnyType')

handle	Type: System.UInt32 . The notification handle
--------	--

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS error code.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to [TryDeleteDeviceNotification\(UInt32\)](#) [[▶ 990](#)] should always called when the notification is not used anymore.

6.2.35.1.8.2 IAdsNotifications.TryAddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the [AdsNotificationEx](#) [[▶ 993](#)] event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object? userData,
    Type type,
    int[]? args,
    out uint handle
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.

userData	Type: System.Object This object can be used to store user specific data (tag data)
type	Type: System.Type Type of the object stored in the event argument ('AnyType')
args	Type: .System.Int32 . The 'AnyType' arguments.
handle	Type: System.UInt32 . The notification handle.

Return Value

Type: [AdsErrorCode](#) [▶ [664](#)]
The ADS Error code.

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to [DeleteDeviceNotification\(UInt32\)](#) [▶ [983](#)] should always be called when the notification is not used anymore.

6.2.35.2 IAdsNotifications Events

The [IAdsNotifications](#) [[▶ 966](#)] type exposes the following members.

Events

	Name	Description
 	AdsNotification [▶ 991]	Occurs when the ADS device sends a notification to the client.
	AdsNotificationError [▶ 993]	Occurs when a exception has occurred during notification management.
 	AdsNotificationEx [▶ 993]	Occurs when the ADS devices sends a notification to the client.
 	AdsSumNotification [▶ 994]	Occurs when Notifications are send (bundled notifications)

Reference

- [IAdsNotifications Interface](#) [[▶ 966](#)]
- [TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.35.2.1 IAdsNotifications.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<AdsNotificationEventArgs> AdsNotification
```

Value

Type: [System.EventHandler.AdsNotificationEventArgs](#) [► 695].

Remarks

The Event Argument contains the raw data value of the notification, not marshalled to .NET types.

Examples

Example of receiving AdsNotification events.

Trigger on changed values by ADS Notifications

```
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms

        //byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread

    /*SynchronizationContext syncContext = SynchronizationContext.Current;
    _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

[IAdsNotifications Interface](#) [► 966]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.35.2.2 IAdsNotifications.AdsNotificationError Event

Occurs when a exception has occurred during notification management.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError
```

Value

Type: [System.EventHandler.AdsNotificationErrorEventArgs](#) [[▶ 694](#)].

Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the 'AdsInvalidNotificationException' which describes the invalid notification handle by its 'AdsInvalidNotificationException.Handle' property.

Reference

[IAdsNotifications Interface](#) [[▶ 966](#)]

[IAdsNotifications.AdsNotification](#) [[▶ 991](#)]

[IAdsNotifications.AdsNotificationEx](#) [[▶ 993](#)]

6.2.35.2.3 IAdsNotifications.AdsNotificationEx Event

Occurs when the ADS devices sends a notification to the client.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

Value

Type: [System.EventHandler.AdsNotificationExEventArgs](#) [[▶ 699](#)].

Remarks

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshallers.

Examples

Example of receiving AdsNotificationEx events.

Trigger on changed values by ADS Notifications

```

CancellationToken cancel = CancellationTokens.None;

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ....
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}

```

Reference

[IAdsNotifications Interface \[► 966\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.35.2.4 IAdsNotifications.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```

Value

Type: [System.EventHandler.AdsSumNotificationEventArgs](#).

Remarks

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The [AdsNotification \[► 991\]](#) and [AdsNotificationEx \[► 993\]](#) events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this AdsSumNotification event. The full performance is reached only, when all notifications are handled on this event.

Examples

Example of receiving AdsSumNotification events.

Trigger on changed values by ADS Notifications

```

private async Task RegisterSumNotificationsAsync()
{
    CancellationTokens cancel = CancellationTokens.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsSumNotification += Client_SumNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;
    }
}

```

```
// Notification to a DINT Type (UINT32)
// Check for change every 200 ms

//byte[] notificationBuffer = new byte[sizeof(UInt32)];

ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

if (result.Succeeded)
{
    notificationHandle = result.Handle;
    await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
    // Unregister the Event / Handle
    ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
}
client.AdsNotification -= Client_AdsNotification2;
}

private void Client_SumNotification(object sender, AdsSumNotificationEventArgs e)
{
    // Timestamp of the Notification List
    DateTimeOffset dateTime = e.TimeStamp;

    // List of Raw ADS Notifications
    IList<Notification> notifications = e.Notifications;

    foreach(Notification notification in notifications)
    {
        // Notifications can be handled more efficiently, because they occur together
        // handler and can be transformed/
        synchronized in one step compared to AdsClient.AdsNotification events.
    }
}
```

6.2.36 IAdsReadWrite Interface

Interface for ADS Read/Write access via IndexGroup / IndexOffset

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsReadWrite
```

The IAdsReadWrite type exposes the following members.

Methods

	Name	Description
	ReadAsync [► 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadWriteAsync [► 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	TryRead [► 998]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryReadWrite [► 998]	Writes data synchronously to an ADS device and reads data from that device.

	Name	Description
	TryWrite [▶ 999]	Writes data synchronously to an ADS device.
	WriteAsync [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer.

Reference

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.36.1 IAdsReadWrite Methods

The [IAdsReadWrite \[▶ 995\]](#) type exposes the following members.

Methods

	Name	Description
	ReadAsync [▶ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset
	ReadWriteAsync [▶ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer
	TryRead [▶ 998]	Reads data synchronously from an ADS device and writes it to the given stream.
	TryReadWrite [▶ 998]	Writes data synchronously to an ADS device and reads data from that device.
	TryWrite [▶ 999]	Writes data synchronously to an ADS device.
	WriteAsync [▶ 1000]	Writes the data / Value asynchronously into the specified writeBuffer.

6.2.36.1.1 IAdsReadWrite.ReadAsync Method

Reads the data asynchronously from specified IndexGroup/IndexOffset

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultRead> ReadAsync (
    uint indexGroup,
    uint indexOffset,
    Memory<byte> buffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.

buffer	Type: System.Memory.Byte . The read buffer, memory area where the data is written.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultRead](#) [▶ 1143].

A task that represents the asynchronous read operation. The [ResultRead](#) [▶ 1143] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [▶ 1145]) and the [ErrorCode](#) [▶ 1120] after execution..

6.2.36.1.2 IAdsReadWrite.ReadWriteAsync Method

Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultReadWrite> ReadWriteAsync (
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultReadWrite](#) [▶ 1163].

A task that represents the asynchronous 'ReadWrite' operation. The [ResultReadWrite](#) [▶ 1163] parameter contains the total number of bytes read into the buffer ([ReadBytes](#) [▶ 1145]) and the [ErrorCode](#) [▶ 1120] after execution.

6.2.36.1.3 IAdsReadWrite.TryRead Method

Reads data synchronously from an ADS device and writes it to the given stream.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryRead(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> buffer,
    out int readBytes
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
buffer	Type: System.Memory.Byte . The read buffer / memory area where the read data is written.
readBytes	Type: System.Int32 . The number of read bytes.

Return Value

Type: [AdsErrorCode \[▶ 664\]](#)

The ADS error code.

Reference

6.2.36.1.4 IAdsReadWrite.TryReadWrite Method

Writes data synchronously to an ADS device and reads data from that device.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadWrite(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    out int readBytes
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
readBytes	Type: System.Int32 . The read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS Error code.

6.2.36.1.6 IAdsReadWrite.WriteAsync Method

Writes the data / Value asynchronously into the specified writeBuffer.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultWrite> WriteAsync(
    uint indexGroup,
    uint indexOffset,
    ReadOnlyMemory<byte> writeBuffer,
    CancellationToken cancel
)
```

Parameters

indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultWrite](#) [[▶ 1187](#)].

A task that represents the asynchronous 'Write' operation. The [ResultWrite](#) [[▶ 1187](#)] parameter contains the [ErrorCode](#) [[▶ 1120](#)] after execution.

Reference

6.2.37 IAdsReadWrite2 Interface

Interface for ADS Read/Write access via IndexGroup / IndexOffset

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsReadWrite2 : IAdsReadWrite
```

The IAdsReadWrite2 type exposes the following members.

Methods

	Name	Description
	Read [▶ 1002]	Reads data synchronously from an ADS device and writes it to the given readBuffer

	Name	Description
	ReadAsync [▸ 996]	Reads the data asynchronously from specified IndexGroup/IndexOffset (Inherited from IAdsReadWrite [▸ 995].)
	ReadWrite [▸ 1002]	Writes data synchronously to an ADS device and then Reads data from this device into the readBuffer
	ReadWriteAsync [▸ 997]	Read/Writes data asynchronously to/from the specified writeBuffer, readBuffer (Inherited from IAdsReadWrite [▸ 995].)
	TryRead [▸ 998]	Reads data synchronously from an ADS device and writes it to the given stream. (Inherited from IAdsReadWrite [▸ 995].)
	TryReadWrite [▸ 998]	Writes data synchronously to an ADS device and reads data from that device. (Inherited from IAdsReadWrite [▸ 995].)
	TryWrite [▸ 999]	Writes data synchronously to an ADS device. (Inherited from IAdsReadWrite [▸ 995].)
	Write(UInt32, UInt32) [▸ 1003]	Triggers a 'Write' call to the ADS device at the specified address.
	Write(UInt32, UInt32, ReadOnlyMemory.BYTE) [▸ 1004]	Writes data synchronously to an ADS device.
	WriteAsync [▸ 1000]	Writes the data / Value asynchronously into the specified writeBuffer. (Inherited from IAdsReadWrite [▸ 995].)

Reads data synchronously from an ADS device and writes it to the given stream.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
int Read(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
timeout	Type: System.Int32 The timeout.

Return Value

Type: [Int32](#)
Number of successfully returned data bytes.

Reference

[IAdsReadWriteTimeoutAccess Interface \[▶ 1005\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.38.1.2 IAdsReadWriteTimeoutAccess.ReadAny Method

Reads data synchronously from an ADS device and writes it to an object.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 Index group of the ADS variable.
indexOffset	Type: System.UInt32 Index offset of the ADS variable.
type	Type: System.Type Type of the object to be read.
args	Type: .System.Int32 . Additional arguments.
timeout	Type: System.Int32 The timeout.

Return Value

Type: [Object](#)
The Value of the data marshalled to the specified type.

Remarks

If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args. The type is limited to Primitive types ('AnyType').

6.2.38.1.3 IAdsReadWriteTimeoutAccess.ReadWrite Method

Writes data synchronously to an ADS device and then Reads data from this device.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
int ReadWrite (
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
timeout	Type: System.Int32 The timeout.

Return Value

Type: [Int32](#)

Number of successfully returned data bytes.

6.2.38.1.4 IAdsReadWriteTimeoutAccess.TryRead Method

Reads data synchronously from an ADS device and writes it to the given stream.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

AdsErrorCode TryRead(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    int timeout,
    out int readBytes
)
    
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
readBuffer	Type: System.Memory.Byte . The read buffer.
timeout	Type: System.Int32 The timeout.
readBytes	Type: System.Int32 . The read bytes.

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]
The ADS Error code.

Reference

Writes data synchronously to an ADS device and then Reads data from this device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

AdsErrorCode TryReadWrite(
    uint indexGroup,
    uint indexOffset,
    Memory<byte> readBuffer,
    ReadOnlyMemory<byte> writeBuffer,
    int timeout,
    out int readBytes
)
    
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.

readBuffer	Type: System.Memory.Byte . The read stream.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write stream.
timeout	Type: System.Int32 The timeout.
readBytes	Type: System.Int32 . The read bytes.

Return Value

Type: [AdsErrorCode](#) [▶ [664](#)]
The ADS Error code.

Reference

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void Write(
    uint indexGroup,
    uint indexOffset,
    ReadOnlyMemory<byte> writeBuffer,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 The index group number of the requested ADS service.
indexOffset	Type: System.UInt32 The index offset number of the requested ADS service.
writeBuffer	Type: System.ReadOnlyMemory.Byte . The write buffer.
timeout	Type: System.Int32 The timeout.

Reference

[IAdsReadWriteTimeoutAccess Interface](#) [[▶ 1005](#)]

6.2.38.1.8 IAdsReadWriteTimeoutAccess.WriteAny Method

Writes an object synchronously to an ADS device.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void WriteAny(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[] args,
    int timeout
)
```

Parameters

indexGroup	Type: System.UInt32 Contains the index group number of the requested ADS service.
indexOffset	Type: System.UInt32 Contains the index offset number of the requested ADS service.
value	Type: System.Object Object to write to the ADS device (Primitive type, 'AnyType')

args	Type: <u>System.Int32</u> . Additional arguments.
timeout	Type: <u>System.Int32</u> The timeout.

Return Value

Type:
System.Int32.

Remarks

If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. If the Type of the object to be written is an array type, the number of elements for each dimension has to be specified in the parameter args. The value is limited to Primitive types ('AnyType').

6.2.39 IAdsRpcInvoke Interface

Interface IAdsRpcInvoke

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsRpcInvoke
```

Methods

	Name	Description
	InvokeRpcMethodAsync(String, String, Object, CancellationToken) [► 1021]	Invokes the specified RPC Method asynchronously
	InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [► 1024]	Invokes the specified RPC Method asynchronously
	InvokeRpcMethodAsync(String, String, Object, Any	Invokes the specified RPC Method asynchronously

	Name	Description
	TypeSpecifier, AnyTypeSpecifier, CancellationToken) [▶ 1022]	
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1026]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, Object, Object.) [▶ 1028]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1031]	Invokes the rpc method.
 	TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object.) [▶ 1030]	Invokes the rpc method.

Remarks

This interface is used to invoke ADS RPC Method calls. This can be done 'symbolic' via the Method name or the MethodID of the method on the specified symbol. To activate the RPC Access within the PLC environment, its dataType (Structure, FB) must be marked with the PlcAttribute 'TcRpcEnable' to enable RpcMethods.

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.39.1.1.1 IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object.)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters
)
```

Parameters

- symbolPath Type: [System.String](#)
The symbol path.
- methodName Type: [System.String](#)
The method name.
- inParameters Type: [.System.Object.](#)
The input parameters or NULL

Return Value

Type: [Object](#)

The return value of the Method (as object).

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] { (short) 3, (short) 4 });

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

Reference

[IAdsRpcInvoke Interface \[► 1012\]](#)

[TwinCAT.Ads Namespace \[▸ 179\]](#)

6.2.39.1.1.2 IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object., .Object..)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
Object InvokeRpcMethod(  
    string symbolPath,  
    string methodName,  
    Object[] inParameters,  
    out Object[] outParameters  
)
```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object. The input parameters or NULL
outParameters	Type: .System.Object.. The output parameters.

Return Value

Type: [Object](#)
The return value of the Method (as object).

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier \[▸ 2094\]](#) specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram  
{  
    /// <summary>  
    /// Defines the entry point of the application.  
    /// </summary>  
    /// <param name="args">The arguments.</param>  
    static void Main(string[] args)  
    {  
        // Get the AdsAddress from command-line arguments  
        AmsAddress address = ArgParser.Parse(args);  
  
        using (AdsClient client = new AdsClient())  
        {  
            //client.Synchronize = false;
```

```

// Connect to the target device
client.Connect(address);

SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);

// Get the Symbols (Dynamic Symbols)

IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

// Call a Method that has the following signature (within MAIN Program)
/* {attribute 'TcRpcEnable'}
METHOD PUBLIC M_Add : INT
VAR_INPUT
    i1 : INT := 0;
    i2 : INT := 0;
END_VAR
*/

short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

// Call a Method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[] {});

//Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
    string methodName = method.Name;

    foreach(IRpcMethodParameter parameter in method.Parameters)
    {
        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
    }
}
}
}

```

Reference

[IAdsRpcInvoke Interface \[► 1012\]](#)

[InvokeRpcMethod Overload \[► 1015\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.39.1.1.3 IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```

Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters
)

```

Parameters

symbolPath	Type: System.String The symbol path.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The ret specifier (specifying the return value) or NULL.
outParameters	Type: .System.Object . The out parameters.

Return Value

Type: [Object](#)
The return value of the Method (as object).

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.39.1.2.1 IAdsRpcInvoke.InvokeRpcMethodAsync Method (String, String, .Object., CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultRpcMethod> InvokeRpcMethodAsync (
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String The symbol/Instance path of the symbol.
methodName	Type: System.String The method name.
inParameters	Type: .System.Object. The parameters.
cancel	Type: System.Threading.CancellationToken The cancellation token

Return Value

Type: [Task.ResultRpcMethod](#) [[▶ 1176](#)].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [[▶ 1176](#)] results contains the return value together with the output parameters.

Remarks

Because this overload doesn't provide any [AnyTypeSpecifier](#) [[▶ 2094](#)] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.39.1.2.2 IAdsRpcInvoke.InvokeRpcMethodAsync Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

Task<ResultRpcMethod> InvokeRpcMethodAsync (
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    CancellationToken cancel
)

```

Parameters

symbolPath	Type: System.String The symbol/Instance path of the symbol.
------------	--

methodName	Type: System.String The method name.
inParameters	Type: System.Object . The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094]. The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [▶ 2094] The ret specifier (specifying the return value) or NULL.
cancel	Type: System.Threading.CancellationToken The cancellation token

Return Value

Type: [Task.ResultRpcMethod](#) [[▶ 1176](#)].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [[▶ 1176](#)] results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. [ReturnValue](#) [[▶ 1179](#)] and the [ErrorCode](#) [[▶ 1120](#)] of the ADS communication after execution.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)

            IStructInstance main = (IStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of
            the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
        }
    }
}
```

```

//Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)

6.2.39.1.2.3 IAdsRpcInvoke.InvokeRpcMethodAsync Method (IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

Task<ResultRpcMethod> InvokeRpcMethodAsync (
    IRpcCallableInstance symbol,
    IRpcMethod method,
    Object[]? inParameters,
    AnyTypeSpecifier[]? outSpecifiers,
    AnyTypeSpecifier? retSpecifier,
    CancellationToken cancel
)

```

Parameters

symbol	Type: TwinCAT.TypeSystem.IRpcCallableInstance [► 2606] The RPC callable symbol."
method	Type: TwinCAT.TypeSystem.IRpcMethod [► 2625] The method.
inParameters	Type: .System.Object. The parameters.
outSpecifiers	Type: .TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] . The out specifiers (specifying the out types) or NULL.
retSpecifier	Type: TwinCAT.TypeSystem.AnyTypeSpecifier [► 2094] The ret specifier (specifying the return value) or NULL.
cancel	Type: System.Threading.CancellationToken The cancellation token

Return Value

Type: [Task.ResultRpcMethod](#) [► 1176].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The [ResultRpcMethod](#) [► 1176] results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. 	Name	Description
 	TryInvokeRpcMethod(String, String, .Object., Object.) [► 1026]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(String, String, .Object., .Object., Object.) [► 1028]	Invokes the specified RPC Method
 	TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object., Object.) [► 1031]	Invokes the rpc method.
 	TryInvokeRpcMethod(String, String, .Object., .AnyTypeSpecifier, .AnyTypeSpecifier, .Object., Object.) [► 1030]	Invokes the rpc method.

Reference[IAdsRpcInvoke Interface \[► 1012\]](#)[TwinCAT.Ads Namespace \[► 179\]](#)**6.2.39.1.3.1 IAdsRpcInvoke.TryInvokeRpcMethod Method (String, String, .Object., Object.)**

Invokes the specified RPC Method

Namespace: [TwinCAT.Ads \[► 179\]](#)**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[]? inParameters,
    out Object?? retValue
)
    
```

Parameters

symbolPath	Type: <u>System.String</u> The symbol path.
methodName	Type: <u>System.String</u> The method name.
inParameters	Type: <u>.System.Object</u> . The parameters.
retValue	Type: <u>System.Object</u> . The return value of the RPC method as object.

Return Value

Type: AdsErrorCode [▶ 664]
The ADS Error Code.

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [▶ 2094] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```

6.2.40 IAdsSession Interface

Interface IAdsSession

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```

public interface IAdsSession : ISession,
    IConnectionStateProvider, ISymbolServerProvider

```

The IAdsSession type exposes the following members.

Properties

	Name	Description
	Address [▶ 1035]	Gets the Address specifier of the Session / connection
	AddressSpecifier [▶ 94]	Gets the communication endpoint address string representation. (Inherited from ISession [▶ 92].)
	Connection [▶ 94]	Gets the Connection object. (Inherited from ISession [▶ 92].)

	Name	Description
	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	EstablishedAt [▶ 95]	Gets the UTC time when the session was established. (Inherited from ISession [▶ 92].)
	Id [▶ 95]	Gets the Session Id (Inherited from ISession [▶ 92].)
	IsConnected [▶ 96]	Gets a value indicating whether the session is connected. (Inherited from ISession [▶ 92].)
	NetId [▶ 1036]	Gets the NetId of the Session
	Owner [▶ 1036]	Gets the Session owner.
	Port [▶ 1036]	Gets the Ams Port of the Session
	Provider [▶ 96]	Gets the Session Provider (Inherited from ISession [▶ 92].)
	SymbolServer [▶ 106]	Gets the symbol server. (Inherited from ISymbolServerProvider [▶ 106].)

Methods

	Name	Description
	Close [▶ 97]	Closes this ISession [▶ 92] (Inherited from ISession [▶ 92].)
	Connect [▶ 97]	Connects the session and returns the established IConnection [▶ 79] object. (Inherited from ISession [▶ 92].)
	ConnectAsync [▶ 99]	Connects the session and returns the established IConnection [▶ 79] object. (Inherited from ISession [▶ 92].)
	Disconnect [▶ 98]	Disconnects the ISession [▶ 92] (Inherited from ISession [▶ 92].)
	EnsureConnection [▶ 98]	Ensures, that the ISession [▶ 92] is connected and returns the IConnection [▶ 79] object. (Inherited from ISession [▶ 92].)

Events

	Name	Description
	ConnectionStateChanged [▶ 91]	Occurs when connection status of the IConnectionStateProvider [▶ 89] has been changed. (Inherited from IConnectionStateProvider [▶ 89].)

6.2.40.1 IAdsSession Properties

The [IAdsSession](#) [[▶ 1033](#)] type exposes the following members.

Properties

	Name	Description
	Address [▶ 1035]	Gets the Address specifier of the Session / connection
	AddressSpecifier [▶ 94]	Gets the communication endpoint address string representation. (Inherited from ISession [▶ 92].)
	Connection [▶ 94]	Gets the Connection object. (Inherited from ISession [▶ 92].)
 	ConnectionState [▶ 90]	Gets the current Connection state of the IConnectionStateProvider [▶ 89] (Inherited from IConnectionStateProvider [▶ 89].)
	EstablishedAt [▶ 95]	Gets the UTC time when the session was established. (Inherited from ISession [▶ 92].)
	Id [▶ 95]	Gets the Session Id (Inherited from ISession [▶ 92].)
	IsConnected [▶ 96]	Gets a value indicating whether the session is connected. (Inherited from ISession [▶ 92].)
	NetId [▶ 1036]	Gets the NetId of the Session
	Owner [▶ 1036]	Gets the Session owner.
	Port [▶ 1036]	Gets the Ams Port of the Session
	Provider [▶ 96]	Gets the Session Provider (Inherited from ISession [▶ 92].)
	SymbolServer [▶ 106]	Gets the symbol server. (Inherited from ISymbolServerProvider [▶ 106].)

6.2.40.1.1 IAdsSession.Address Property

Gets the Address specifier of the Session / connection

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AmsAddress Address { get; }
```

Property Value

Type: [AmsAddress](#) [[▶ 752](#)]

The address.

Reference

[IAdsSession Interface](#) [[▶ 1033](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.40.1.2 IAdsSession.NetId Property

Gets the NetId of the Session

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AmsNetId NetId { get; }
```

Property Value

Type: [AmsNetId](#) [[▶ 767](#)]

The net identifier.

Reference

[IAdsSession Interface](#) [[▶ 1033](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.40.1.3 IAdsSession.Owner Property

Gets the Session owner.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Object? Owner { get; }
```

Property Value

Type: [Object](#)

The owner or NULL

Reference

[IAdsSession Interface](#) [[▶ 1033](#)]

6.2.41 IAdsSessionSettings Interface

Interface for ADS Session Settings

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsSessionSettings
```

The IAdsSessionSettings type exposes the following members.

Properties

	Name	Description
	ResurrectionTime [▶ 1038]	Gets or sets the resurrection time.
	SymbolLoader [▶ 1039]	Gets or sets the symbol loader settings
	Timeout [▶ 1039]	Gets the ADS timeout in milliseconds.

Reference

6.2.42 IAdsStateControl Interface

Interface for reading and controlling the ADS state.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsStateControl
```

Methods

	Name	Description
	TryWriteControl(StateInfo) [▶ 1042]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, ReadOnlyMemory.BYTE) [▶ 1043]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo) [▶ 1044]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, ReadOnlyMemory.BYTE) [▶ 1045]	Changes the ADS status and the device status of an ADS server.
	WriteControlAsync(AdsState, UInt16, CancellationToken) [▶ 1046]	Changes the ADS status and device status of the ADS server asynchronously.
	WriteControlAsync(AdsState, UInt16, ReadOnlyMemory.BYTE, CancellationToken) [▶ 1047]	Changes the ADS status and device status of the ADS server asynchronously.

Changes the ADS status and device status of the ADS server asynchronously.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultAds> WriteControlAsync (
    AdsState state,
    ushort deviceState,
    CancellationToken cancel
)
```

Parameters

state	Type: TwinCAT.Ads.AdsState [► 729] The ADS state.
deviceState	Type: System.UInt16 The device state.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [► 1116].

A task that represents the asynchronous 'WriteControl' operation. The [ResultAds](#) [► 1116] parameter contains the state the [ErrorCode](#) [► 1120] of the ADS communication after execution.

6.2.43 IAdsStateControlTimeout Interface

Interface IAdsStateControlTimeout

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsStateControlTimeout
```

The IAdsStateControlTimeout type exposes the following members.

Methods

	Name	Description
	ReadState [▸ 1049]	Reads the ADS status and the device status from an ADS server.
	TryReadState [▸ 1050]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	TryWriteControl(StateInfo, Int32) [▸ 1051]	Changes the ADS status and the device status of an ADS server.
	TryWriteControl(StateInfo, ReadOnlyMemory<Byte>, Int32) [▸ 1052]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, Int32) [▸ 1053]	Changes the ADS status and the device status of an ADS server.
	WriteControl(StateInfo, ReadOnlyMemory<Byte>, Int32) [▸ 1054]	Changes the ADS status and the device status of an ADS server.

Remarks

For internal use only.

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadState(
    int timeout,
    out StateInfo stateInfo
)
```

Parameters

timeout	Type: System.Int32 The timeout.
stateInfo	Type: TwinCAT.Ads.StateInfo [▶ 1200]. The ADS statue and device status.

Return Value

Type: [AdsErrorCode](#) [▶ 664]

AdsErrorCode of the ADS read state call. Check for AdsErrorCode.NoError to see if call was successful.

6.2.45 IAdsStateProvider Interface

Interface IAdsStateProvider

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IAdsStateProvider
```

The IAdsStateProvider type exposes the following members.

Methods

	Name	Description
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server.

	Name	Description
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server.
	RegisterAdsStateCh angedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation.
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation.

Events

	Name	Description
	AdsStateChanged [▶ 1061]	Occurs when the AdsState of the target system has been changed.

Reference

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.45.1 IAdsStateProvider Methods

The [IAdsStateProvider](#) [▶ 1056] type exposes the following members.

Methods

	Name	Description
	ReadState [▶ 1058]	Reads the ADS status and the device status from an ADS server.
	ReadStateAsync [▶ 1058]	Reads the ADS status and the device status from an ADS server.
	RegisterAdsStateCh angedAsync [▶ 1059]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation.
	TryReadState [▶ 1059]	Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.
	UnregisterAdsState ChangedAsync [▶ 1060]	Registers for AdsStateChanged [▶ 1061] events as an asynchronous operation.

Reference

[IAdsStateProvider Interface](#) [▶ 1056]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.45.1.1 IAdsStateProvider.ReadState Method

Reads the ADS status and the device status from an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
StateInfo ReadState()
```

Return Value

Type: [StateInfo](#) [► 1200]

The ADS status and device status or an Exception with ErrorCode: [DeviceServiceNotSupported](#) [► 664].

Remarks

Not all ADS Servers support the State ADS Request.

Reference

[IAdsStateProvider Interface](#) [► 1056]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.45.1.2 IAdsStateProvider.ReadStateAsync Method

Reads the ADS status and the device status from an ADS server.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultReadDeviceState> ReadStateAsync (
    CancellationToken cancel
)
```

Parameters

cancel	Type: System.Threading.CancellationToken The cancellation token
--------	--

Return Value

Type: [Task.ResultReadDeviceState](#) [► 1157].

A task that represents the asynchronous 'ReadState' operation. The [ResultReadDeviceState](#) [► 1157] parameter contains the state ([State](#) [► 1159]) as long as the [ErrorCode](#) [► 1120] of the ADS communication after execution.

Remarks

Not all ADS Servers support the State ADS Request

Reference

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultAds> RegisterAdsStateChangedAsync (
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsStateChangedEventArgs [► 729] . The handler function to be registered for AdsStateChanged calls.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds \[► 1116\]](#).

A task that represents the asynchronous 'RegisterAdsStateChanged' operation. The [ResultAds \[► 1116\]](#) parameter contains the state the [ErrorCode \[► 1120\]](#) of the ADS communication after execution.

Remarks

Not all ADS Servers support the State ADS Request.

Reference

[IAdsStateProvider Interface \[► 1056\]](#)

[TwinCAT.Ads Namespace \[► 179\]](#)

6.2.45.1.4 IAdsStateProvider.TryReadState Method

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadState (
    out StateInfo stateInfo
)
```

Parameters

stateInfo	Type: TwinCAT.Ads.StateInfo [► 1200] . The ADS statue and device status.
-----------	---

Return Value

Type: [AdsErrorCode](#) [▶ 664]

[AdsErrorCode](#) [▶ 664] of the ADS read state call. Check for [NoError](#) [▶ 664] to see if call was successful.

Remarks

Not all ADS Servers support the State ADS Request

Reference

[IAdsStateProvider Interface](#) [▶ 1056]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.45.1.5 IAdsStateProvider.UnregisterAdsStateChangedAsync Method

Registers for [AdsStateChanged](#) [▶ 1061] events as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultAds> UnregisterAdsStateChangedAsync (
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

Parameters

handler	Type: System.EventHandler.AdsStateChangedEventArgs [▶ 729]. The handler function to be unregistered.
cancel	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.ResultAds](#) [▶ 1116].

A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The [ResultAds](#) [▶ 1116] parameter contains the state the [ErrorCode](#) [▶ 1120] of the ADS communication after execution.

Reference

[IAdsStateProvider Interface](#) [▶ 1056]

6.2.47 IAdsSymbolicAccess Interface

Interface for symbolic ads access.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public interface IAdsSymbolicAccess
```

The IAdsSymbolicAccess type exposes the following members.

Methods

	Name	Description
	CleanupSymbolTable [▶ 1070]	Clears the internal symbol / DataTypes cache.
	ReadDataType [▶ 1070]	Call this method to obtain information about the specified data type.
	ReadDataTypeAsync [▶ 1070]	Call this method to obtain information about the specified data type.
	ReadSymbol [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadSymbolAsync [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	ReadValue(ISymbol) [▶ 1073]	Reads the value of a symbol and returns it as an object.
	ReadValue(String, Type) [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol.
	ReadValue.T.(ISymbol) [▶ 1074]	Reads the value of a symbol and returns it as an object.
	ReadValue.T.(String) [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol.
	ReadValueAsync(ISymbol, CancellationToken) [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync(String, Type, CancellationToken) [▶ 1079]	Reads the value of a symbol asynchronously.
	ReadValueAsync.T.(ISymbol, CancellationToken) [▶ 1078]	Reads the value of a symbol asynchronously and returns it as an object.
	ReadValueAsync.T.(String, CancellationToken) [▶ 1076]	Reads the value of a symbol asynchronously.
	TryReadDataType [▶ 1079]	Call this method to obtain information about the specified data type.
	TryReadSymbol [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices.

	Name	Description
	TryReadValue(ISymbol, Object.) [▶ 1082]	Reads the value of a symbol and returns it as an object.
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T. (ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object.
	TryReadValue.T. (String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object.
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T. (ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T. (String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValue.T. (ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.

6.2.47.1 IAdsSymbolicAccess Methods

The `IAdsSymbolicAccess` [▶ 1065] type exposes the following members.

Methods

	Name	Description
	<code>CleanupSymbolTable</code> [▶ 1070]	Clears the internal symbol / DataTypes cache.
	<code>ReadDataType</code> [▶ 1070]	Call this method to obtain information about the specified data type.
	<code>ReadDataTypeAsync</code> [▶ 1070]	Call this method to obtain information about the specified data type.
	<code>ReadSymbol</code> [▶ 1071]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	<code>ReadSymbolAsync</code> [▶ 1072]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	<code>ReadValue(ISymbol)</code> [▶ 1073]	Reads the value of a symbol and returns it as an object.
	<code>ReadValue(String, Type)</code> [▶ 1075]	Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol.
	<code>ReadValue.T.(ISymbol)</code> [▶ 1074]	Reads the value of a symbol and returns it as an object.
	<code>ReadValue.T.(String)</code> [▶ 1073]	Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol.
	<code>ReadValueAsync(ISymbol, CancellationToken)</code> [▶ 1077]	Reads the value of a symbol asynchronously and returns it as an object.
	<code>ReadValueAsync(String, Type, CancellationToken)</code> [▶ 1079]	Reads the value of a symbol asynchronously.
	<code>ReadValueAsync.T.(ISymbol, CancellationToken)</code> [▶ 1078]	Reads the value of a symbol asynchronously and returns it as an object.
	<code>ReadValueAsync.T.(String, CancellationToken)</code> [▶ 1076]	Reads the value of a symbol asynchronously.
	<code>TryReadDataType</code> [▶ 1079]	Call this method to obtain information about the specified data type.
	<code>TryReadSymbol</code> [▶ 1080]	Call this method to obtain information about the individual symbols (variables) in ADS devices.
	<code>TryReadValue(ISymbol, Object.)</code> [▶ 1082]	Reads the value of a symbol and returns it as an object.

	Name	Description
	TryReadValue(String, Type, Object.) [▶ 1083]	Reads the value of a symbol and returns the value as object.
	TryReadValue.T. (ISymbol, T.) [▶ 1083]	Reads the value of a symbol and returns it as an object.
	TryReadValue.T. (String, T.) [▶ 1081]	Reads the value of a symbol and returns the value as object.
	TryWriteValue(ISymbol, Object) [▶ 1086]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue(String, Object) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.
	TryWriteValue.T. (ISymbol, T) [▶ 1087]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	TryWriteValue.T. (String, T) [▶ 1085]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValue(ISymbol, Object) [▶ 1089]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue(String, Object) [▶ 1088]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValue.T. (ISymbol, T) [▶ 1090]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValue.T.(String, T) [▶ 1089]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
	WriteValueAsync(ISymbol, Object, CancellationToken) [▶ 1092]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (ISymbol, T, CancellationToken) [▶ 1093]	Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
	WriteValueAsync.T. (String, T, CancellationToken) [▶ 1091]	Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.

Reference

[IAdsSymbolicAccess Interface](#) [▶ 1065]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.47.1.1 IAdsSymbolicAccess.CleanupSymbolTable Method

Clears the internal symbol / DataTypes cache.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
void CleanupSymbolTable()
```

Remarks

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which needs an extra ADS round trip.

Reference

[IAdsSymbolicAccess Interface](#) [► 1065]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.47.1.2 IAdsSymbolicAccess.ReadDataType Method

Call this method to obtain information about the specified data type.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
IDataType ReadDataType(  
    string typeName  
)
```

Parameters

typeName	Type: System.String Name of the data type (without namespace)
----------	--

Return Value

Type: [IDataType](#) [► 2475]

An containing the requested type.

Reference

[IAdsSymbolicAccess Interface](#) [► 1065]

[TwinCAT.Ads Namespace](#) [► 179]

[IAdsSymbolicAccess.ReadDataTypeAsync\(String, CancellationToken\)](#) [► 1070]

6.2.47.1.3 IAdsSymbolicAccess.ReadDataTypeAsync Method

Call this method to obtain information about the specified data type.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultValue<IDataType>> ReadDataTypeAsync (
    string typeName,
    CancellationToken cancel
)
```

Parameters

typeName	Type: System.String Name of the data type.
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultValue \[▸ 1181\].IDataType \[▸ 2475\]](#)..

A task that represents the asynchronous 'ReadDataType' operation. The [ResultValue.TValue. \[▸ 1181\]](#) parameter contains the read value ([Value \[▸ 1185\]](#)) and the [ErrorCode \[▸ 1120\]](#) after execution.

6.2.47.1.4 IAdsSymbolicAccess.ReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
IAdsSymbol ReadSymbol (
    string symbolPath
)
```

Parameters

symbolPath	Type: System.String Name of the symbol.
------------	--

Return Value

Type: [IAdsSymbol \[▸ 1755\]](#)

An [IAdsSymbol \[▸ 1755\]](#) containing the requested symbol information or null if symbol could not be found.

Reference

6.2.47.1.5 IAdsSymbolicAccess.ReadSymbolAsync Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultValue<IAdsSymbol>> ReadSymbolAsync (
    string symbolPath,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String Name of the symbol.
cancel	Type: System.Threading.CancellationToken The cancel token.

Return Value

Type: [Task.ResultValue](#) [► 1181].[IAdsSymbol](#) [► 1755].

A task that represents the asynchronous 'ReadSymbolInfo' operation. The [ResultValue.TValue](#). [► 1181] parameter contains the read value ([Value](#) [► 1185]) and the [ErrorCode](#) [► 1120] after execution.

6.2.47.1.6.1 IAdsSymbolicAccess.ReadValue.T. Method (String)

Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol.

Namespace: [TwinCAT.Ads](#) [[▸ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
T ReadValue<T>(
    string symbolPath
)
```

Parameters

symbolPath	Type: System.String Name of the ADS symbol.
------------	--

Type Parameters

T	The value type
---	----------------

Return Value

Type: T
Value of the symbol

6.2.47.1.6.2 IAdsSymbolicAccess.ReadValue Method (ISymbol)

Reads the value of a symbol and returns it as an object.

Namespace: [TwinCAT.Ads](#) [[▸ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Object ReadValue(
    ISymbol symbol
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol that should be read.
--------	--

Return Value

Type: [Object](#)

The value of the symbol as an object.

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Reference

6.2.47.1.6.3 IAdsSymbolicAccess.ReadValue.T. Method (ISymbol)

Reads the value of a symbol and returns it as an object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
T ReadValue<T>(
    ISymbol symbol
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol that should be read.
--------	--

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: T

The value of the symbol.

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultValue<T>> ReadValueAsync<T>(
    string symbolPath,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String Name of the ADS symbol.
cancel	Type: System.Threading.CancellationToken The cancel token.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [Task.ResultValue](#) [[▶ 1181](#)].T..

A task that represents the asynchronous read operation. The [ResultAnyValue](#) [[▶ 1129](#)] parameter contains the read value ([Value](#) [[▶ 1185](#)]) and the [ErrorCode](#) [[▶ 1120](#)] after execution.

Remarks

The parameter type must have the same binary layout as the ADS symbol.

6.2.47.1.10.1 IAdsSymbolicAccess.TryReadValue.T. Method (String, T.)

Reads the value of a symbol and returns the value as object.

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadValue<T>(
    string symbolPath,
    out T value
)
```

Parameters

symbolPath	Type: System.String Name of the ADS symbol.
value	Type: T. The read value of the Symbol.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [AdsErrorCode \[► 664\]](#)

The [AdsErrorCode \[► 664\]](#).

Remarks

The parameter type must have the same binary layout as the ADS symbol.

Reference

6.2.47.1.10.2 IAdsSymbolicAccess.TryReadValue Method (ISymbol, Object.)

Reads the value of a symbol and returns it as an object.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
AdsErrorCode TryReadValue(
    ISymbol symbol,
    out Object?? value
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [► 2691] The symbol that should be read.
value	Type: System.Object . The value.

Return Value

Type: [AdsErrorCode](#) [► 664]

The ADS Error Code

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

6.2.47.1.10.3 IAdsSymbolicAccess.TryReadValue.T. Method (ISymbol, T.)

Reads the value of a symbol and returns it as an object.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
AdsErrorCode TryReadValue<T>(
    ISymbol symbol,
    out T value
)
```

Parameters

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol that should be read.
value	Type: T. The value.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [AdsErrorCode](#) [[▶ 664](#)]

The ADS Error Code

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

6.2.47.1.13.1 IAdsSymbolicAccess.WriteValueAsync.T. Method (String, T, CancellationToken)

Writes the passed object value to the specified ADS symbol.The parameter type must have the same binary layout as the ADS symbol.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
Task<ResultWrite> WriteValueAsync<T>(
    string symbolPath,
    T value,
    CancellationToken cancel
)
```

Parameters

symbolPath	Type: System.String Name of the ADS symbol.
value	Type: T Object holding the value to be written to the ADS symbol
cancel	Type: System.Threading.CancellationToken The cancel token.

Type Parameters

T	The value type.
---	-----------------

Return Value

Type: [Task.ResultWrite](#) [▸ 1187].

A task that represents the asynchronous 'WriteSymbol' operation. The [ResultWrite](#) [▸ 1187] parameter contains the [ErrorCode](#) [▸ 1120] after execution.

Interface IAdsSymbolTableProvider

Namespace: [TwinCAT.Ads \[► 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
public interface IAdsSymbolTableProvider
```

The IAdsSymbolTableProvider type exposes the following members.

Methods

	Name	Description
	GetSymbolTableAsync nc [▶ 1094]	Gets the symbol table asynchronously
	SetSymbolEncoding [▶ 1095]	Sets the default encoding.
	TryGetSymbolTable [▶ 1095]	Get the symbol table.

Reference

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.48.1 IAdsSymbolTableProvider Methods

The [IAdsSymbolTableProvider](#) [[▶ 1093](#)] type exposes the following members.

Methods

	Name	Description
	GetSymbolTableAsync nc [▶ 1094]	Gets the symbol table asynchronously
	SetSymbolEncoding [▶ 1095]	Sets the default encoding.
	TryGetSymbolTable [▶ 1095]	Get the symbol table.

6.2.48.1.1 IAdsSymbolTableProvider.GetSymbolTableAsync Method

Gets the symbol table asynchronously

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
Task<ResultValue<ISymbolInfoTable>> GetSymbolTableAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: [System.Threading.CancellationToken](#)
The cancellation token.

Return Value

Type: [Task.ResultValue](#) [[▶ 1181](#)].[ISymbolInfoTable](#)..

A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The [ResultValue.TValue](#). [[▶ 1181](#)] parameter contains the value [Value](#) [[▶ 1185](#)] and the return code [ErrorCode](#) [[▶ 1120](#)] of the ADS communication after execution.

Sets the default encoding.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
void SetSymbolEncoding(  
    Encoding encoding  
)
```

Parameters

encoding Type: [System.Text.Encoding](#)
The encoding.

Reference

[IAdsSymbolTableProvider Interface](#) [[▶ 1093](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.48.1.3 **IAdsSymbolTableProvider.TryGetSymbolTable Method**

Get the symbol table.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
AdsErrorCode TryGetSymbolTable(  
    out ISymbolInfoTable?? table  
)
```

Parameters

table Type: [ISymbolInfoTable](#).
The symbol table.

Return Value

Type: [AdsErrorCode](#) [▶ 664]
The ADS Error Code.

Reference

Syntax

C#

```
Object? UserData { get; }
```

Property Value

Type: [Object](#)

The user data.

Reference

[INotification Interface \[▸ 1096\]](#)

[TwinCAT.Ads Namespace \[▸ 179\]](#)

6.2.50 INotificationSettings Interface

Interface for Notification Settings Implements the [IComparable.T](#).

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface INotificationSettings : IComparable<INotificationSettings>
```

The INotificationSettings type exposes the following members.

Methods

	Name	Description
	<u>CompareTo</u>	Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object. (Inherited from <u>IComparable.INotificationSettings..</u>)

Reference

[TwinCAT.Ads Namespace \[▶ 179\]](#)

[System.IComparable.T.](#)

6.2.50.1 INotificationSettings Methods

The [INotificationSettings \[▶ 1098\]](#) type exposes the following members.

Methods

	Name	Description
	<u>CompareTo</u>	Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object. (Inherited from <u>IComparable.INotificationSettings [▶ 1098]..</u>)

Reference

[INotificationSettings Interface \[▶ 1098\]](#)

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.51 IRouterNotificationProvider Interface

Interface for AMS Router Notifications.

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public interface IRouterNotificationProvider
```

The IRouterNotificationProvider type exposes the following members.

Events

	Name	Description
	<u>RouterStateChanged</u> [▶ 1100]	(Local) Router state changed event.

Reference

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.51.1 IRouterNotificationProvider Events

The [IRouterNotificationProvider](#) [[▶ 1099](#)] type exposes the following members.

Events

	Name	Description
	RouterStateChanged [▶ 1100]	(Local) Router state changed event.

Reference

[IRouterNotificationProvider Interface](#) [[▶ 1099](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.51.1.1 IRouterNotificationProvider.RouterStateChanged Event

(Local) Router state changed event.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
event EventHandler<AmsRouterNotificationEventArgs> RouterStateChanged
```

Value

Type: [System.EventHandler.AmsRouterNotificationEventArgs](#) [[▶ 798](#)].

Remarks

This event indicates, that a changed event is received from the Local AmsRouter independant of the connected target address. A remote system RouterStateChanged event cannot be received at another system - it cannot traverse TwinCAT systems.

Reference

6.2.52 Notification Class

Class Notification. Implements the [INotification](#) [[▶ 1096](#)]

Inheritance Hierarchy

[System.Object](#)
[TwinCAT.Ads.Notification](#)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class Notification : INotification
```

The Notification type exposes the following members.

Constructors

	Name	Description
	Notification(INotification) [▶ 1102]	Initializes a new instance of the Notification class.
	Notification(UInt32, DateTimeOffset, Object, ReadOnlyMemory.BYTE) [▶ 1103]	Initializes a new instance of the Notification class.

Properties

	Name	Description
	Data [▶ 1104]	The notification Data.
	Handle [▶ 1105]	The notification handle
	TimeStamp [▶ 1105]	Gets the time stamp of the INotification [▶ 1096]
	UserData [▶ 1105]	Attached UserData/Tag at the INotification [▶ 1096]

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

6.2.53 NotificationSettings Class

Notification communication settings

Inheritance Hierarchy

System.Object

TwinCAT.Ads.NotificationSettings

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class NotificationSettings : INotificationSettings,
    IComparable<INotificationSettings>
```

The NotificationSettings type exposes the following members.

Constructors

	Name	Description
	NotificationSettings (AdsTransMode, Int32, Int32) [▶ 1108]	Initializes a new instance of the NotificationSettings class.
	NotificationSettings (AdsTransMode, TimeSpan, TimeSpan) [▶ 1109]	Initializes a new instance of the NotificationSettings class.

Properties

	Name	Description
	CycleTime [▶ 1110]	Gets the cycle time (in milliseconds) for AdsNotifications.
 	Default [▶ 1111]	Gets the default Settings (AdsTransMode.OnChange, CycleTime 200 ms, MaxDelay: off)
 	ImmediatelyOnChange [▶ 1111]	Gets the settings for a 'Immediate on change' notification.
	MaxDelay [▶ 1111]	Gets the Maximum Delay Time (in milliseconds) for AdsNotifications.
	NotificationMode [▶ 1112]	Gets the ADS Transmission mode.

Methods

	Name	Description
	CompareTo [▶ 1113]	Compares this NotificationSettings in term of priorities to the other NotificationSettings.
	Equals [▶ 1113]	Determines whether the specified <u>Object</u> is equal to this instance. (Overrides <u>Object.Equals(Object)</u> .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <u>Object</u> .)
	GetHashCode [▶ 1114]	Gets the HashCode of the Address (Overrides <u>Object.GetHashCode</u> .)

	Name	Description
	GetType	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)
	MemberwiseClone	Creates a shallow copy of the current <u>Object</u> . (Inherited from <u>Object</u> .)
	ToString	Returns a string that represents the current object. (Inherited from <u>Object</u> .)

Operators

	Name	Description
 	Equality [▶ 1115]	Implements the == operator.
 	Inequality [▶ 1115]	Implements the != operator.

Remarks

AdsTransMode [▶ 740]	Parameter semantic
CyclicInContext [▶ 740]	Value of parameter CycleTime is interpreted as task context number AdsSymbol.ContextMask/>
OnChangeInContext [▶ 740]	Value of parameter CycleTime is interpreted as task context number AdsSymbol.ContextMask/>

6.2.53.3.1 NotificationSettings.CompareTo Method

Compares this [NotificationSettings](#) [► 1106] in term of priorities to the other [NotificationSettings](#) [► 1106].

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public int CompareTo(
    INotificationSettings? other
)
```

Parameters

other	Type: TwinCAT.Ads.INotificationSettings [► 1098] The other.
-------	--

Return Value

Type: [Int32](#)

1: this has higher priority (shorter times), 0: Equal, -1: Lower priority

Implements

[IComparable.T..CompareTo\(T\)](#)

Reference

[NotificationSettings Class](#) [► 1106]

6.2.53.3.2 NotificationSettings.Equals Method

Determines whether the specified [Object](#) is equal to this instance.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override bool Equals(
    Object? obj
)
```

Parameters

obj	Type: System.Object The object to compare with the current object.
-----	---

Return Value

Type: [Boolean](#)

true if the specified [Object](#) is equal to this instance; otherwise, false.

Reference

[NotificationSettings Class](#) [► 1106]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.53.3 NotificationSettings.GetHashCode Method

Gets the HashCode of the Address

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public override int GetHashCode()
```

Return Value

Type: [Int32](#)

A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference

6.2.53.4.1 NotificationSettings.Equality Operator

Implements the == operator.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool operator ==(
    NotificationSettings? settings1,
    NotificationSettings? settings2
)
```

Parameters

settings1	Type: TwinCAT.Ads.NotificationSettings [► 1106] The settings1.
settings2	Type: TwinCAT.Ads.NotificationSettings [► 1106] The settings2.

Return Value

Type: [Boolean](#)

The result of the operator.

Reference

[NotificationSettings Class](#) [► 1106]

[TwinCAT.Ads Namespace](#) [► 179]

6.2.53.4.2 NotificationSettings.Inequality Operator

Implements the != operator.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static bool operator !=(
    NotificationSettings? settings1,
    NotificationSettings? settings2
)
```

Parameters

settings1	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings1.
settings2	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The settings2.

Return Value

Type: [Boolean](#)
The result of the operator.

Reference

[NotificationSettings Class](#) [▶ 1106]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.54 ResultAds Class

Base class for an (asynchronous) ADS Task Result

Inheritance Hierarchy

[System.Object](#)
 TwinCAT.Ads.ResultAds
 More... [▶ 1118]

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public class ResultAds
```

The ResultAds type exposes the following members.

Constructors

	Name	Description
	ResultAds(AdsError Code) [▶ 1118]	Initializes a new instance of the ResultAds class.
	ResultAds(AdsError Code, UInt32) [▶ 1119]	Initializes a new instance of the ResultAds class.

Properties

	Name	Description
	Empty [▶ 1120]	Gets an empty ResultAds initialized to None [▶ 664].
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result object.

	Name	Description
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds state is failed.
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds state is succeeded.

Methods

	Name	Description
 	CreateError(AdsErrorCode) [▶ 1123]	Creates an Error Result.
 	CreateError(AdsErrorCode, UInt32) [▶ 1124]	Creates an Error Result.
 	CreateSuccess. [▶ 1125]	Creates a success result.
 	CreateSuccess(UInt32) [▶ 1126]	Creates a success result.
 	CreateSuccess.TValue(TValue) [▶ 1126]	Creates a success result.
 	CreateSuccess.TValue(TValue, UInt32) [▶ 1127]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Operators

	Name	Description
	.(ResultAds to ResultAccess) [▶ 1128]	Performs an implicit conversion from ResultAds to ResultAccess [▶ 3197].

Remarks

The base class is used whenever an asynchronous task communicates via ADS and should return its [AdsErrorCode](#) [▶ 664] within its tasks result.

Namespace: [TwinCAT.Ads](#) [▸ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultDeviceInfo : ResultAds
```

The ResultDeviceInfo type exposes the following members.

Properties

	Name	Description
	DeviceInfo [▸ 1134]	Gets the device information (Task result)
	ErrorCode [▸ 1120]	Gets the ADS Error code bound to this Result [▸ 1116] object. (Inherited from ResultAds [▸ 1116] .)
	Failed [▸ 1121]	Gets a value indicating whether the ResultAds [▸ 1116] state is failed. (Inherited from ResultAds [▸ 1116] .)
	Invokeld [▸ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▸ 1116] .)
	Name [▸ 1134]	The name of the Device
	Succeeded [▸ 1121]	Gets a value indicating whether the ResultAds [▸ 1116] state is succeeded. (Inherited from ResultAds [▸ 1116] .)
	Version [▸ 1135]	The ADS Version of the the Device.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▸ 1128]	Sets the error state of this ResultAds [▸ 1116] (Inherited from ResultAds [▸ 1116] .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

6.2.57 ResultHandle Class

Result object for asynchronous registering an ADS Handle via tasks.

Inheritance Hierarchy

System.Object

TwinCAT.Ads.ResultAds [[▶ 1116](#)]

TwinCAT.Ads.ResultHandle

Namespace: TwinCAT.Ads [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultHandle : ResultAds
```

The ResultHandle type exposes the following members.

Properties

	Name	Description
	Empty [▶ 1138]	Gets the empty ResultHandle object.
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Handle [▶ 1138]	Gets the registered handle
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)

Methods

	Name	Description
	CreateError(AdsError rCode) [▶ 1140]	Creates an Error Result.
	CreateError(AdsError rCode, UInt32) [▶ 1140]	Creates an Error Result.
	CreateSuccess(UInt32) [▶ 1141]	Creates a success result.
	CreateSuccess(UInt32, UInt32) [▶ 1142]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)

	Name	Description
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static ResultReadAdsState Empty { get; }
```

Property Value

Type: [ResultReadAdsState](#) [▶ 1146]

The empty / unprocessed result.

Reference

[ResultReadAdsState Class](#) [▶ 1146]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.59.1.2 ResultReadAdsState.State Property

Gets the ADS state.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsState State { get; }
```

Property Value

Type: [AdsState](#) [▶ 729]

Reference

[ResultReadAdsState Class](#) [▶ 1146]

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.59.2 ResultReadAdsState Methods

The [ResultReadAdsState](#) [▶ 1146] type exposes the following members.

Methods

	Name	Description
	CreateError [▶ 1149]	Creates an Error Result.
	CreateSuccess [▶ 1149]	Creates a success result.

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116].)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultReadBytes : ResultRead
```

The ResultReadBytes type exposes the following members.

Properties

	Name	Description
	Data [▶ 1152]	The read bytes as continuous region of memory.
	Empty [▶ 1152]	Gets the empty ResultReadBytes object.
		
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)

	Name	Description
	ReadBytes [▶ 1145]	Gets the number of Read bytes. (Inherited from ResultRead [▶ 1143].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)

Methods

	Name	Description
	CreateError(AdsErrorCode) [▶ 1154]	Creates an error result.
	CreateError(AdsErrorCode, UInt32) [▶ 1155]	Creates an error result.
	CreateSuccess(ReadOnlyMemory.Byte) [▶ 1156]	Creates a success result.
	CreateSuccess(ReadOnlyMemory.Byte, UInt32) [▶ 1156]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultReadWrite : ResultRead
```

The ResultReadWrite type exposes the following members.

Properties

	Name	Description
	Empty [▶ 1165]	Gets the empty ResultReadWrite object.
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)
	ReadBytes [▶ 1145]	Gets the number of Read bytes. (Inherited from ResultRead [▶ 1143].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)

Methods

	Name	Description
	CreateError(AdsError rCode) [▶ 1167]	Creates an error result;
	CreateError(AdsError rCode, UInt32) [▶ 1167]	Creates an error result;
	CreateSuccess(Int32) [▶ 1168]	Creates a success result.
	CreateSuccess(Int32, UInt32) [▶ 1169]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116].)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultReadWriteBytes : ResultReadBytes
```

The ResultReadWriteBytes type exposes the following members.

Properties

	Name	Description
	Data [▶ 1152]	The read bytes as continuous region of memory. (Inherited from ResultReadBytes [▶ 1150].)
 S	Empty [▶ 1172]	Gets the empty ResultReadWriteBytes object.
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)
	ReadBytes [▶ 1145]	Gets the number of Read bytes. (Inherited from ResultRead [▶ 1143].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)

Methods

	Name	Description
	CreateError(AdsError) [▶ 1173]	Creates an error result;
	CreateError(AdsError, UInt32) [▶ 1174]	Creates an error result;
	CreateSuccess(ReadOnlyMemory.Byte) [▶ 1175]	Creates a success result.

	Name	Description
	CreateSuccess(ReadOnlyMemory<Byte>, UInt32) [▶ 1176]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116].)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Class representing a result of an asynchronous RpcMethod call. Implements the [ResultAds](#) [► 1116]

Inheritance Hierarchy

[System.Object](#)

[TwinCAT.Ads.ResultAds](#) [► 1116]

[TwinCAT.Ads.ResultRpcMethod](#)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultRpcMethod : ResultAds
```

The ResultRpcMethod type exposes the following members.

Constructors

	Name	Description
	ResultRpcMethod [▶ 1178]	Initializes a new instance of the ResultRpcMethod struct.

Properties

	Name	Description
	Empty [▶ 1179]	Gets the Empty Result (initialized to None [▶ 664] and default ReturnValue [▶ 1179] (NULL).
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116] .)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116] .)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116] .)
	OutValues [▶ 1179]	Gets the output parameter values.
	ReturnValue [▶ 1179]	The (optional) return value of the RPC Method.
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116] .)

Methods

	Name	Description
	CreateError [▶ 1180]	Creates an error result.
	CreateSuccess [▶ 1181]	Creates a success result
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116] .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

Optionally this Result holds an [ReturnValue](#) [\[▶ 1179\]](#) if the RpcCall is not void.

6.2.64.3.2 ResultRpcMethod.CreateSuccess Method

Creates a success result

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static ResultRpcMethod CreateSuccess(
    Object? returnValue,
    Object[]? outParameters
)
```

Parameters

returnValue	Type: System.Object The return value.
outParameters	Type: .System.Object . The out parameters.

Return Value

Type: [ResultRpcMethod](#) [▶ 1176]
ResultRpcMethod.

Reference

6.2.65 ResultValue.TValue. Class

ADS Result object returning a generic value result (TValue) (asynchronous read). Implements the [ResultAds](#) [▶ 1116]

Inheritance Hierarchy

System.Object

- [TwinCAT.Ads.ResultAds](#) [[▶ 1116](#)]
- [TwinCAT.Ads.ResultValue.TValue](#).
- [TwinCAT.Ads.ResultAnyValue](#) [[▶ 1129](#)]
- [TwinCAT.Ads.ResultValue2.I, V.](#) [[▶ 1234](#)]
- [TwinCAT.TypeSystem.ResultDataTypes](#) [[▶ 2872](#)]
- [TwinCAT.TypeSystem.ResultSymbols.T.](#) [[▶ 2884](#)]

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultValue<TValue> : ResultAds
```

Type Parameters

TValue	The type of the result value.
--------	-------------------------------

The ResultValue.TValue. type exposes the following members.

Properties

	Name	Description
	Empty [▶ 1185]	Gets the Empty result initialized to NoError [▶ 664] and the default of TValue.
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)
	Value [▶ 1185]	The value object.

Methods

	Name	Description
	CreateError [▶ 1186]	Creates an Error Result.
	CreateSuccess [▶ 1187]	Creates a success result.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)

	Name	Description
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116].)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Remarks

The [ResultValue.TValue](#) type is used in generic ADS read operations, where a value is returned.

6.2.67 SessionSettings Class

Session settings class

Inheritance Hierarchy

[System.Object](#)
 TwinCAT.Ads.SessionSettings
Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public class SessionSettings : IAdsSessionSettings
```

The SessionSettings type exposes the following members.

Constructors

	Name	Description
	SessionSettings(Int32) [▶ 1199]	Initializes a new instance of the SessionSettings class.
	SessionSettings(Int32, Boolean) [▶ 1200]	Initializes a new instance of the SessionSettings class.

Properties

	Name	Description
	Default [▶ 1195]	Gets the default Settings (Synchronized).

	Name	Description
		
	DefaultCommunicationTimeout [▶ 1196]	The default communication timeout (5 Seconds)
		
	DefaultResurrectionTime [▶ 1196]	The default resurrection time (21 Seconds)
		
	FastWriteThrough [▶ 1196]	Gets a Settings object that configures the AdsSession for FastWriteThrough
		
	ResurrectionTime [▶ 1197]	Gets or sets the resurrection time (Default: DefaultResurrectionTime [▶ 1196])
	SymbolLoader [▶ 1198]	Gets or sets the symbol loader settings
	Timeout [▶ 1198]	Gets the ADS timeout in milliseconds.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

[TwinCAT.Ads Namespace](#) [▶ 179]

6.2.67.1.4 SessionSettings.FastWriteThrough Property

Gets a Settings object that configures the AdsSession for FastWriteThrough

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static SessionSettings FastWriteThrough { get; }
```

Property Value

Type: [SessionSettings](#) [[▶ 1193](#)]

Session settings for a fast write through (with 200 ms Timeout).

Remarks

The settings typically can be used for polling clients, where the "FailFast" feature will be bypassed. That means, that communication fails doesn't trigger the FailFast interceptor and every Request will go out via ADS. This has the Drawback that communication Timeouts are longer and subsequent timeouts block the ADS mailbox (with the danger of overflows). So use this setting with care for specific purposes and should not be used for standard communication.

- No Resurrection time and therefore:
- No FailFastHandler active.
- Default communication timeout 200ms.
- Not synchronized Notifications.

Reference

[SessionSettings Class](#) [[▶ 1193](#)]

[TwinCAT.Ads Namespace](#) [[▶ 179](#)]

6.2.67.1.5 **SessionSettings.ResurrectionTime Property**

Gets or sets the resurrection time (Default: [DefaultResurrectionTime](#) [[▶ 1196](#)])

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public TimeSpan ResurrectionTime { get; set; }
```

Property Value

Type: [TimeSpan](#)

The resurrection time.

Implements

[IAdsSessionSettings.ResurrectionTime](#) [[▶ 1038](#)]

Remarks

The resurrection time is the time after a lost connection [Lost](#) [[▶ 72](#)] can be 'resurrected'. This time is set to 21 Seconds by default (a value greater than the standard Ethernet connection timeout of 20s). The reason for this timeout is not to flood the ADS mailbox with requests that cannot be handled by the ethernet infrastructure. As long this Timespan is not expired after a recognized [Lost](#) [[▶ 72](#)], no further data communication is done, and requests are immediately ('FailFast') answered by communication exceptions.

Change this value only for edge cases.

6.2.68 StateInfo Structure

The structure contains the ADS state and device state.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public struct StateInfo : IEquatable<StateInfo>
```

The StateInfo type exposes the following members.

Constructors

	Name	Description
	StateInfo(ReadOnly Span.Byte.) [▶ 1203]	Initializes a new instance of the StateInfo struct.
	StateInfo(AdsState, Int16) [▶ 1202]	Initializes a new Instance of the StateInfo struct.
	StateInfo(AdsState, UInt16) [▶ 1203]	Initializes a new Instance of the StateInfo struct.

Properties

	Name	Description
	AdsState [▶ 1204]	Gets or sets the ADS state of this StateInfo object.
	DeviceState [▶ 1205]	Gets or sets the device state of this StateInfo object.
	Empty [▶ 1205]	Empty / Invalid / Uninitialized state.
		

Methods

	Name	Description
	Equals(Object) [▶ 1206]	Determines whether the specified <u>Object</u> is equal to this instance. (Overrides <u>ValueType.Equals(Object)</u> .)
	Equals(StateInfo) [▶ 1207]	Determines whether the specified StateInfo is equal to this instance.
	GetHashCode [▶ 1207]	Returns a hash code for this instance. (Overrides <u>ValueType.GetHashCode</u> .)
	GetType	Gets the <u>Type</u> of the current instance. (Inherited from <u>Object</u> .)
	ToString	Returns the fully qualified type name of this instance. (Inherited from <u>ValueType</u> .)

Operators

	Name	Description
 	Equality [▶ 1208]	Implements the ==.
 	Inequality [▶ 1208]	Implements the !=.

Reference

6.2.69 TaskExtensions Class

TaskExtensions for Task Cancellation and Timeout

Inheritance Hierarchy

[System.Object](#)
TwinCAT.Ads.TaskExtensions

Namespace: [TwinCAT.Ads \[▸ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static class TaskExtensions
```

The TaskExtensions type exposes the following members.

Methods

	Name	Description
 	WithCancellation.T. [▸ 1210]	Extends a worker Task with cancellation.
 	WithCancellationAn dTimeout [▸ 1211]	Extends a worker task with timeout and Cancellation
 	WithTimeout [▸ 1212]	Extends a worker task with a timeout.

Reference

[TwinCAT.Ads Namespace](#) [► 179]

6.2.69.1.1 TaskExtensions.WithCancellation.T. Method

Extends a worker Task with cancellation.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static Task<T> WithCancellation<T>(
    this Task<T> worker,
    CancellationToken cancellationToken
)
```

Parameters

worker	Type: System.Threading.Tasks.Task.T. The worker task.
cancellationToken	Type: System.Threading.CancellationToken The cancellation token.

Type Parameters

T	The Task Result
---	-----------------

Return Value

Type: [Task.T.](#)
[Task<T>](#).

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [Task.T](#).. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Extends a worker task with timeout and Cancellation

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static Task<AdsErrorCode> WithCancellationAndTimeout (
    this Task<AdsErrorCode> worker,
    TimeSpan timeout,
    CancellationToken cancellationToken
)
```

Parameters

worker	Type: System.Threading.Tasks.Task.AdsErrorCode [▶ 664] . The worker task.
timeout	Type: System.TimeSpan The timeout.
cancellationToken	Type: System.Threading.CancellationToken The cancellation token.

Return Value

Type: [Task.AdsErrorCode \[▶ 664\]](#).

Task<AdsErrorCode>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [Task.AdsErrorCode \[▶ 664\]](#).. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

6.2.69.1.3 TaskExtensions.WithTimeout Method

Extends a worker task with a timeout.

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static Task<AdsErrorCode> WithTimeout(
    this Task<AdsErrorCode> worker,
    TimeSpan timeout
)
```

Parameters

worker	Type: System.Threading.Tasks.Task.AdsErrorCode [► 664]. The worker task
timeout	Type: System.TimeSpan The timeout.

Return Value

Type: [Task.AdsErrorCode](#) [► 664].

Task<AdsErrorCode>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [Task.AdsErrorCode](#) [► 664]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Syntax

C#

```
public class ValueNotificationEventArgs<T> : AdsNotificationEventArgs
```

Type Parameters

T

The ValueNotificationEventArgs.T. type exposes the following members.

Properties

	Name	Description
	Data ▸ 697]	Memory object holding the Notification Data/Value. (Inherited from AdsNotificationEventArgs ▸ 695].)
	Handle ▸ 697]	Gets the Notification handle. (Inherited from AdsNotificationEventArgs ▸ 695].)
	TimeStamp ▸ 698]	Gets the time stamp of this Notification as DateTimeOffset . (Inherited from AdsNotificationEventArgs ▸ 695].)
	UserData ▸ 698]	Gets the user object. This object is passed by to AddDeviceNotification and can be used to store data. (Inherited from AdsNotificationEventArgs ▸ 695].)

	Name	Description
	Value [▶ 1214]	Value of the ADS Notification.

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

6.2.72.1.1 AdsClientExtensions.ReadWithFallback Method (IAdsConnection, UInt32, UInt32, Memory.Byte., UInt32, Boolean.)

Ads Read with fallback.

Namespace: [TwinCAT.Ads](#) [▶ 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static ResultRead ReadWithFallback(
    this IAdsConnection connection,
    uint indexGroup,
    uint indexOffset,
    Memory<byte> buffer,
    uint fallbackOffset,
    out bool fallback
)
```

Parameters

connection	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The connection.
indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
buffer	Type: System.Memory.Byte. The buffer.
fallbackOffset	Type: System.UInt32 The fallback offset.
fallback	Type: System.Boolean. if set to true [fallback].

Return Value

Type: [ResultRead](#) [[▶ 1143](#)]
ResultRead.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [[▶ 876](#)]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

6.2.72.1.1.2 **AdsClientExtensions.ReadWithFallback Method (IAdsConnection, UInt32, UInt32, UInt32, Memory.Byte., Func.ResultRead, Boolean., Boolean.)**

Ads Read with Fallback.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static ResultRead ReadWithFallback(
    this IAdsConnection connection,
    uint indexGroup,
    uint indexOffset,
    uint fallbackOffset,
    Memory<byte> buffer,
    Func<ResultRead, bool> shouldProcessFallback,
    out bool fallback
)
```

Parameters

connection	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The connection.
indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
fallbackOffset	Type: System.UInt32 The fallback offset.
buffer	Type: System.Memory.Byte . The buffer.
shouldProcessFallback	Type: System.Func.ResultRead [▶ 1143], Boolean . The should process fallback.
fallback	Type: System.Boolean . if set to true [fallback].

Return Value

Type: [ResultRead](#) [[▶ 1143](#)]
 ResultRead.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [[▶ 876](#)]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

6.2.72.1.2.1 AdsClientExtensions.ReadWithFallbackAsync Method (IAdsConnection, UInt32, UInt32, UInt32, Memory.Byte, CancellationToken)

Ads Read with fallback as an asynchronous operation.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static Task<ResultRead> ReadWithFallbackAsync (
    this IAdsConnection connection,
    uint indexGroup,
    uint indexOffset,
    uint fallbackOffset,
    Memory<byte> buffer,
    CancellationToken cancel
)
```

Parameters

connection	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The connection.
indexGroup	Type: System.UInt32 The index group.
indexOffset	Type: System.UInt32 The index offset.
fallbackOffset	Type: System.UInt32 The fallback offset.
buffer	Type: System.Memory.Byte . The buffer.
cancel	Type: System.Threading.CancellationToken The cancel.

Return Value

Type: [Task.ResultRead](#) [▶ 1143].
Task<ResultRead>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [▶ 876]. Class [AdsNotificationsUnregisteredEventArgs](#). This class cannot be inherited. Implements the [EventArgs](#)

Inheritance Hierarchy

[System.Object](#)

[System.EventArgs](#)

[TwinCAT.Ads.AdsNotificationsInvalidatedEventArgs](#)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public sealed class AdsNotificationsInvalidatedEventArgs : EventArgs
```

The AdsNotificationsInvalidatedEventArgs type exposes the following members.

Constructors

	Name	Description
	AdsNotificationsInvalidatedEventArgs [▶ 1229]	Initializes a new instance of the AdsNotificationsInvalidatedEventArgs class.

Properties

	Name	Description
	Notifications [▶ 1230]	Gets the notifications that occurred at a specific TimeStamp [▶ 1230]
	TimeStamp [▶ 1230]	Gets the time stamp of the Notifications [▶ 1230]

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

6.2.73.1 AdsNotificationsInvalidatedEventArgs Constructor

Initializes a new instance of the [AdsNotificationsInvalidatedEventArgs](#) [[▶ 1228](#)] class.

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public AdsNotificationsInvalidatedEventArgs(
    DateTimeOffset dateTime,
    IList<Notification> notifications
)
```

Parameters

dateTime	Type: System.DateTimeOffset The date time.
notifications	Type: System.Collections.Generic.IList.Notification [▶ 1100]. The notifications.

	ReferenceAccess	61462	Reference Access (ADSIGRP_SYM_REFERENCE_ACCESS, 0xF016, 61462)
	ValueByHandleMasked	61464	Value Handle with Mask (ADSIGRP_SYM_VALBYHND_WITHMASK, 0xF018, 61464)
	NoSubSymbolAccess	61465	No Access to SubSymbol (ADSIGRP_SYM_NOACCESS_TO_SUBSYM, 0xF019, 61465)

	Member name	Value	Description
	PointerBitAccess	61466	POINTER with BitAccess (ADSIGRP_SYM_POINTER_BITACCESS, 0xF01A, 61466)
	ReferenceBitAccess	61467	Reference with BitAccess (ADSIGRP_SYM_REFERENCE_BITACCESS, 0xF01B, 61467)

Reference

[TwinCAT.Ads Namespace \[▶ 179\]](#)

6.2.75 AdsStateCommand Enumeration

Describes the AdsState Commands

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AdsStateCommand
```

Members

	Member name	Value	Description
	None	0	Ads State is Invalid / Uninitialized
	Reset	2	Resets the AdsServer
	Start	4	Starts the AdsServer
	Stop	6	Stops teh AdsServer
	Reconfig	16	Reconfig (System should restart in config mode)
	Run	5	Sets an AdsServer to Run

Remarks

This enumeration is to refactor out the commands from the states.

Reference

6.2.76 AmsPortRange Enumeration

Defines ranges of [AmsPorts](#). [[▶ 795](#)]

Namespace: [TwinCAT.Ads \[▶ 179\]](#)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public enum AmsPortRange
```

Members

	Member name	Value	Description
	PORT_FIRST	1	Defines the first valid port.
	PORT_LAST	65534	Defines the last valid port (0xFFFE, 65534)
	S7COMM_FIRST	20100	(AMSPORT_R3_S7COMM_FIRST,20100)
	S7COMM_LAST	20199	(AMSPORT_R3_S7COMM_LAST,20199)
	CUSTOMER_FIRST	25000	First usable port for customer R3 ADS Servers (AMSPORT_R3_CUSTOMER_FIRST,25000, 0x61A8)
	CUSTOMER_LAST	25999	Last usable port for customer R3 ADS Servers (AMSPORT_R3_CUSTOMER_LAST,25999,0x658F)
	CUSTOMERPRIVATE_FIRST	26000	First usable port for private networks (0x6590)
	CUSTOMERPRIVATE_LAST	26999	Last usable port for private networks (0x6977)

6.2.77 ResultValue2.I, V. Class

Result object of an asynchronous read. Implements the [ResultAccess](#) [► 3197]

Inheritance Hierarchy

[System.Object](#)

[TwinCAT.Ads.ResultAds](#) [► 1116]

[TwinCAT.Ads.ResultValue](#) [► 1181].V.

[TwinCAT.Ads.ResultValue2.I, V.](#)

Namespace: [TwinCAT.Ads](#) [► 179]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public class ResultValue2<I, V> : ResultValue<V>
```

Type Parameters

I	The SymbolID / AddressInformation bound to the value.
V	The type of the read Value.

The ResultValue2.I, V. type exposes the following members.

Properties

	Name	Description
	ErrorCode [► 1120]	Gets the ADS Error code bound to this Result [► 1116] object. (Inherited from ResultAds [► 1116].)

	Name	Description
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116] .)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116] .)
	Source [▶ 1236]	Gets the source of the value (symbolic specifier/Address).
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116] .)
	Value [▶ 1185]	The value object. (Inherited from ResultValue.TValue. [▶ 1181] .)

Methods

	Name	Description
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object.)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)
	GetHashCode	Serves as the default hash function. (Inherited from Object.)
	GetType	Gets the Type of the current instance. (Inherited from Object.)
	MemberwiseClone	Creates a shallow copy of the current Object. (Inherited from Object.)
	SetError [▶ 1128]	Sets the error state of this ResultAds [▶ 1116] (Inherited from ResultAds [▶ 1116] .)
	ToString	Returns a string that represents the current object. (Inherited from Object.)

6.2.78 ResultWriteControl Class

Class ResultWriteControl. Implements the [ResultAds \[► 1116\]](#)

Inheritance Hierarchy

[System.Object](#)

[TwinCAT.Ads.ResultAds](#) [[▶ 1116](#)]

[TwinCAT.Ads.ResultWriteControl](#)

Namespace: [TwinCAT.Ads](#) [[▶ 179](#)]

Assembly: [TwinCAT.Ads.Abstractions](#) (in [TwinCAT.Ads.Abstractions.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public class ResultWriteControl : ResultAds
```

The ResultWriteControl type exposes the following members.

Constructors

	Name	Description
	ResultWriteControl(ResultWriteControl) [▶ 1239]	Initializes a new instance of the ResultWriteControl class.
	ResultWriteControl(AmsAddress, Boolean, AdsErrorCode, AdsStateCommand, AdsState, AdsState, TimeSpan) [▶ 1239]	Initializes a new instance of the ResultWriteControl class.

Properties

	Name	Description
	Empty [▶ 1241]	Gets the empty ResultWriteControl
	ErrorCode [▶ 1120]	Gets the ADS Error code bound to this Result [▶ 1116] object. (Inherited from ResultAds [▶ 1116].)
	Failed [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is failed. (Inherited from ResultAds [▶ 1116].)
	Invokeld [▶ 1121]	Gets the ADS requests invoke identifier (or 0 if not supported) (Inherited from ResultAds [▶ 1116].)
	Succeeded [▶ 1121]	Gets a value indicating whether the ResultAds [▶ 1116] state is succeeded. (Inherited from ResultAds [▶ 1116].)

Methods

	Name	Description
	Create [▶ 1242]	Creates an ResultWriteControl object.
	CreateFailed(AmsAddress,	Creates a failed ResultWriteControl object.

	Name	Description
	AdsErrorCode , AdsStateCommand [► 1243]	
	CreateFailed(AmsAddress, AdsErrorCode, AdsStateCommand, AdsState) [► 1244]	Creates a failed ResultWriteControl object.
	CreateFailed(AmsAddress, AdsErrorCode, AdsStateCommand, AdsState, AdsState) [► 1245]	Creates a failed ResultWriteControl object.
	CreateSucceeded [► 1246]	Creates a succeeding ResultWriteControl object.
	Equals	Determines whether the specified object is equal to the current object. (Inherited from Object .)
	Finalize	Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as the default hash function. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	SetError [► 1128]	Sets the error state of this ResultAds [► 1116] (Inherited from ResultAds [► 1116].)
	ToString	Returns a string that represents the current object. (Inherited from Object .)

Fields

	Name	Description
	Address [► 1247]	The address
	Latency [► 1247]	The latency/duration until the Result state has been reached.
	Original [► 1247]	The original state before the request is sent.
	Reached [► 1248]	The reached AdsState [► 729] after the AdsStateCommand [► 1233] request has been sent (Resulting state)
	Requested [► 1248]	The AdsStateCommand [► 1233] (Request)
	RequestSucceeded [► 1249]	Gets an indication if the WriteControl request has been succeeded.

6.3 TwinCAT.Ads.Reactive Namespace

Reactive Extensions for the ADS Client. All types within are contained in the ADS companion package "Beckhoff.TwinCAT.Ads.Reactive" which must be referenced seperately. <https://www.nuget.org/packages/Beckhoff.TwinCAT.Ads.Reactive/>

Classes

	Class	Description
	AdsClientExtensions [▶ 1249]	Extension class for AdsClient respective IAdsConnection [▶ 876] to provide reactive ADS extensions.
	AnyTypeExtensions [▶ 1281]	Extension class for IAdsConnection [▶ 876] to provide reactive ADS extensions (accessing symbol value sequences with the ANY_TYPE concept)
	SymbolValueNotification [▶ 1331]	Symbol Notification class
	ValueSymbolExtensions [▶ 1333]	Extension class for IAdsConnection [▶ 876] to provide reactive ADS extensions for accessing symbols that are loaded by the IAdsSymbolLoaderFactory

6.3.1 AdsClientExtensions Class

Extension class for AdsClient respective [IAdsConnection](#) [[▶ 876](#)] to provide reactive ADS extensions.

Inheritance Hierarchy

[System.Object](#)

[TwinCAT.Ads.Reactive.AdsClientExtensions](#)

Namespace: [TwinCAT.Ads.Reactive](#) [[▶ 1249](#)]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 6.0.328+39e3229

Syntax**C#**

```
public static class AdsClientExtensions
```

The AdsClientExtensions type exposes the following members.

Methods

	Name	Description
  	<code>PollAdsState(IAdsConnection, IObservable.Unit.)</code> [▶ 1256]	Gets an observable sequence of AdsState [▶ 729]s via Polling.
  	<code>PollAdsState(IAdsConnection, TimeSpan)</code> [▶ 1257]	Gets an observable sequence of AdsState [▶ 729]s via Polling.
 	<code>PollAdsState2(IAdsConnection, IObservable.Unit.)</code> [▶ 1271]	Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling.
  	<code>PollAdsState2(IAdsConnection, TimeSpan)</code> [▶ 1272]	Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling.
 	<code>PollAdsState2Async(IAdsConnection, IObservable.Unit., Cancellation.Token)</code> [▶ 1274]	Gets an observable sequence of AdsState [▶ 729]s via Polling.
 	<code>PollAdsState2Async(IAdsConnection, TimeSpan, Cancellation.Token)</code> [▶ 1275]	Gets an observable sequence of ResultReadAdsState [▶ 1146]s via Polling.
  	<code>PollAdsStateAsync(IAdsConnection, IObservable.Unit., Cancellation.Token)</code> [▶ 1259]	Gets an observable sequence of AdsState [▶ 729]s via Polling.
  	<code>PollAdsStateAsync(IAdsConnection, TimeSpan, Cancellation.Token)</code> [▶ 1260]	Gets an observable sequence of AdsState [▶ 729]s via Polling.

	Name	Description
 	PollDeviceState(IAdsConnection, IObservable.Unit) [▶ 1276]	Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling.
  	PollDeviceState(IAdsConnection, TimeSpan) [▶ 1276]	Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling.
  	PollDeviceStateAsync(IAdsConnection, IObservable.Unit, Cancellation.Token) [▶ 1278]	Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling.
  	PollDeviceStateAsync(IAdsConnection, TimeSpan, Cancellation.Token) [▶ 1279]	Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling.
  	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s.
 	WhenNotification(IAdsConnection, ISymbol) [▶ 1263]	Gets an observable sequence of Notification [▶ 1100]s.
  	WhenNotification(IAdsConnection, ISymbolCollection) [▶ 1264]	Gets an observable sequence of Notification [▶ 1100] objects.
  	WhenNotification(IAdsConnection, IList.ISymbol, NotificationSettings) [▶ 1268]	Gets an observable sequence of Notification [▶ 1100] objects.
 	WhenNotification(IAdsConnection, ISymbol, NotificationSettings) [▶ 1265]	Gets an observable sequence of SymbolValueNotification [▶ 1331]s.
	WhenSymbolVersionChanges(IAdsConnection) [▶ 1270]	Gets an observable sequence of SymbolVersion changed counts.

	Name	Description
 	WhenSymbolVersionChanges(IAdsConnection, IScheduler) [▶ 1270]	Gets an observable sequence of SymbolVersion changed counts.

Remarks

Reactive Extensions (Rx) are a library for composing asynchronous and event-based programs using observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ + Schedulers. The ADS reactive extensions are built on top of this library to enable ADS Symbol and State Observables, seamlessly bound to the reactive extensions. To use the ADS reactive extensions the TwinCAT.Ads.Reactive Nuget package (or the included TwinCAT.Ads.Reactive.dll) must be referenced. ([Beckhoff.TwinCAT.Ads.Reactive package on Nuget](#)).

Examples

The following sample shows how observe Value changed Notifications with the reactive AdsClientExtensions

Observe changing ADS Symbols with reactive extensions.

```
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    int eventCount = 1;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<SymbolValueNotification>(not =>
    {
        Console.WriteLine(string.Format("{0} {1:u} {2} = '{3}' ({4})", eventCount+
+ , not.TimeStamp, not.Symbol.InstancePath, not.Value, not.Symbol.DataType));
    });

    // Collect the symbols that are registered as Notification sources for their changed values.

    SymbolCollection notificationSymbols = new SymbolCollection();
    IArrayInstance taskInfo = (IArrayInstance)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo"];

    foreach(ISymbol element in taskInfo.Elements)
    {
        ISymbol cycleCount = element.SubSymbols["CycleCount"];
        ISymbol lastExecTime = element.SubSymbols["LastExecTime"];

        notificationSymbols.Add(cycleCount);
        notificationSymbols.Add(lastExecTime);
    }

    // Create a subscription for the first 200 Notifications on Symbol Value changes.
    IDisposable subscription = client.WhenNotification(notificationSymbols, NotificationSettings.Default).Take(200).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Examples

The following sample shows how observe [AdsState](#) [▶ 729] changed Notifications with the reactive AdsClientExtensions

Observe changing ADS states with reactive extensions.

```
// To Test the observer, Start/Stop the local PLC

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    // Reactive Notification Handler
    var valueObserver = Observer.Create<IList<AdsState>>(not =>
    {
        // onNext handler (handling the StateChange)
        AdsState oldValue = not[0];
        AdsState newValue = not[1];
        Console.WriteLine(string.Format("Changed ADSState from '{0}' --
> '{1}!", oldValue, newValue));
    },
    ex => Console.WriteLine($"Error: {ex.Message}"), // Error Handling
    () => Console.WriteLine("WhenAdsStateChanges completed!") // Observer has completed
    );

    // Create a subscription for the AdsState change and buffering 2 Values (for oldValue --
> newValue output).
    IDisposable subscription = client.WhenAdsStateChanges().Buffer(2,1).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

6.3.1.1 AdsClientExtensions Methods

The [AdsClientExtensions \[▶ 1249\]](#) type exposes the following members.

Methods

	Name	Description
	PollAdsState(IAdsConnection, IObservable.Unit) [▶ 1256]	Gets an observable sequence of AdsState [▶ 729] s via Polling.
	PollAdsState(IAdsConnection, TimeSpan) [▶ 1257]	Gets an observable sequence of AdsState [▶ 729] s via Polling.

	Name	Description
	PollAdsState2(IAdsConnection, IObservable.Unit.) [1271]	Gets an observable sequence of ResultReadAdsState [1146]s via Polling.
 	PollAdsState2(IAdsConnection, TimeSpan) [1272]	Gets an observable sequence of ResultReadAdsState [1146]s via Polling.
	PollAdsState2Async(IAdsConnection, IObservable.Unit, Cancellation.Token) [1274]	Gets an observable sequence of AdsState [729]s via Polling.
	PollAdsState2Async(IAdsConnection, TimeSpan, Cancellation.Token) [1275]	Gets an observable sequence of ResultReadAdsState [1146]s via Polling.
 	PollAdsStateAsync(IAdsConnection, IObservable.Unit, Cancellation.Token) [1259]	Gets an observable sequence of AdsState [729]s via Polling.
 	PollAdsStateAsync(IAdsConnection, TimeSpan, Cancellation.Token) [1260]	Gets an observable sequence of AdsState [729]s via Polling.
	PollDeviceState(IAdsConnection, IObservable.Unit.) [1276]	Gets an observable sequence of ResultReadDeviceState [1157]s via Polling.
 	PollDeviceState(IAdsConnection, TimeSpan) [1276]	Gets an observable sequence of ResultReadDeviceState [1157]s via Polling.
 	PollDeviceStateAsync(IAdsConnection, IObservable.Unit, Cancellation.Token) [1278]	Gets an observable sequence of ResultReadDeviceState [1157]s via Polling.

	Name	Description
  	PollDeviceStateAsync(IAdsConnection, TimeSpan, CancellationToken) [▶ 1279]	Gets an observable sequence of ResultReadDeviceState [▶ 1157]s via Polling.
  	WhenAdsStateChanges [▶ 1261]	Gets an observable sequence of AdsState [▶ 729]s.
 	WhenNotification(IAdsConnection, ISymbol) [▶ 1263]	Gets an observable sequence of Notification [▶ 1100]s.
  	WhenNotification(IAdsConnection, ISymbolCollection) [▶ 1264]	Gets an observable sequence of Notification [▶ 1100] objects.
  	WhenNotification(IAdsConnection, IList.ISymbol, NotificationSettings) [▶ 1268]	Gets an observable sequence of Notification [▶ 1100] objects.
 	WhenNotification(IAdsConnection, ISymbol, NotificationSettings) [▶ 1265]	Gets an observable sequence of SymbolValueNotification [▶ 1331]s.
 	WhenSymbolVersionChanges(IAdsConnection) [▶ 1270]	Gets an observable sequence of SymbolVersion changed counts.
 	WhenSymbolVersionChanges(IAdsConnection, IScheduler) [▶ 1270]	Gets an observable sequence of SymbolVersion changed counts.

6.3.1.1.1.1 AdsClientExtensions.PollAdsState Method (IAdsConnection, IObservable.Unit.)

Gets an observable sequence of [AdsState](#) [▶ 729]s via Polling.

Namespace: [TwinCAT.Ads.Reactive](#) [▶ 1249]

Assembly: [TwinCAT.Ads.Reactive](#) (in [TwinCAT.Ads.Reactive.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public static IObservable<AdsState> PollAdsState(
    this IAdsConnection client,
    IObservable<Unit> trigger
)
```

Parameters

client	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The client.
trigger	Type: System.IObservable.Unit. The polling trigger

Return Value

Type: [IObservable.AdsState](#) [▶ 729].
[IObservable<AdsState>](#).

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [▶ 876]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Examples

The following sample shows how observe [AdsState](#) [► 729] via polling with the reactive [AdsClientExtensions](#) [► 1249]

Observe changing ADS States with reactive extensions.

```
// To Test the observer, Start/Stop the local PLC

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    // Reactive Change Handler
    var valueObserver = Observer.Create<IList<AdsState>>(not =>
    {
        AdsState oldValue = not[0];
        AdsState newValue = not[1];

        Console.WriteLine(string.Format("Changed ADSState from '{0}' --> '{1}!", oldValue, newValue));
    });

    // Create a subscription for the AdsState change and buffering 2 Values (for oldValue --
    > newValue output).
    IDisposable subscription = client.PollAdsState(TimeSpan.FromMilliseconds(200)).Buffer(2, 1).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Gets an observable sequence of [AdsState](#) [► 729]s via Polling.

Namespace: [TwinCAT.Ads.Reactive](#) [► 1249]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static IObservable<AdsState> PollAdsState(
    this IAdsConnection connection,
    TimeSpan period
)
```

Parameters

connection	Type: TwinCAT.Ads.IAdsConnection [► 876] The connection.
period	Type: System.TimeSpan The period.

Return Value

Type: [IObservable.AdsState](#) [[▶ 729](#)].
IObservable<AdsState>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [[▶ 876](#)]. When you use instance method syntax to call this method, omit the first parameter. 6.3.1.1.4 AdsClientExtensions.WhenNotification Method

Overload List

	Name	Description
 	WhenNotification(IAdsConnection, ISymbol) [▶ 1263]	Gets an observable sequence of Notification [▶ 1100]s.
  	WhenNotification(IAdsConnection, ISymbolCollection) [▶ 1264]	Gets an observable sequence of Notification [▶ 1100] objects.
  	WhenNotification(IAdsConnection, IList.ISymbol, NotificationSettings) [▶ 1268]	Gets an observable sequence of Notification [▶ 1100] objects.
 	WhenNotification(IAdsConnection, ISymbol, NotificationSettings) [▶ 1265]	Gets an observable sequence of SymbolValueNotification [▶ 1331]s.

6.3.1.1.4.1 AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbol)

Gets an observable sequence of [Notification](#) [[▶ 1100](#)]s.

Namespace: [TwinCAT.Ads.Reactive](#) [[▶ 1249](#)]

Assembly: [TwinCAT.Ads.Reactive](#) (in [TwinCAT.Ads.Reactive.dll](#)) Version: 6.0.328+39e3229

Syntax

C#

```
public static IObservable<Notification> WhenNotification(
    this IAdsConnection client,
    ISymbol symbol
)
```

Parameters

client	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The client.
--------	---

symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol.
--------	--

Return Value

Type: [IObservable.Notification](#) [[▶ 1100](#)].
[IObservable<NotificationValue>](#).

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [[▶ 876](#)]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

6.3.1.1.4.2 AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbolCollection)

Gets an observable sequence of [Notification](#) [[▶ 1100](#)] objects.

Namespace: [TwinCAT.Ads.Reactive](#) [[▶ 1249](#)]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static IObservable<SymbolValueNotification> WhenNotification(
    this IAdsConnection connection,
    ISymbolCollection symbols
)
```

Parameters

connection	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The client.
symbols	Type: TwinCAT.TypeSystem.ISymbolCollection [▶ 2697] The symbols.

Return Value

Type: [IObservable.SymbolValueNotification](#) [[▶ 1331](#)].
[IObservable<NotificationValue>](#).

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [► 876]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Examples

The following sample shows how observe Value changed Notifications with the reactive [AdsClientExtensions](#) [► 1249]

Observe changing ADS Symbols with reactive extensions.

```
// To Test the Observer run a project on the local PLC System (Port 851)

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    int eventCount = 1;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<SymbolValueNotification>(not =>
    {
        Console.WriteLine(string.Format("{0} {1:u} {2} = '{3}' ({4})", eventCount+
+, not.TimeStamp, not.Symbol.InstancePath, not.Value, not.Symbol.DataType));
    }
    );

    // Collect the symbols that are registered as Notification sources for their changed values.

    SymbolCollection notificationSymbols = new SymbolCollection();
    IArrayInstance taskInfo = (IArrayInstance)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskI
nfo"];

    foreach(ISymbol element in taskInfo.Elements)
    {
        ISymbol cycleCount = element.SubSymbols["CycleCount"];
        ISymbol lastExecTime = element.SubSymbols["LastExecTime"];

        notificationSymbols.Add(cycleCount);
        notificationSymbols.Add(lastExecTime);
    }

    // Create a subscription for the first 200 Notifications on Symbol Value changes.
    IDisposable subscription = client.WhenNotification(notificationSymbols, NotificationSettings.Defa
ult).Take(200).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

[AdsClientExtensions.WhenNotification\(IAdsConnection, ISymbol, NotificationSettings\)](#) [► 1265]

6.3.1.1.4.3 AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbol, NotificationSettings)

Gets an observable sequence of [SymbolValueNotification](#) [► 1331]s.

Namespace: [TwinCAT.Ads.Reactive](#) [[▶ 1249](#)]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 6.0.328+39e3229

Syntax

C#

```
public static IObservable<SymbolValueNotification> WhenNotification(
    this IAdsConnection client,
    ISymbol symbol,
    NotificationSettings settings
)
```

Parameters

client	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The client.
symbol	Type: TwinCAT.TypeSystem.ISymbol [▶ 2691] The symbol to observe.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] Notification settings.

Return Value

Type: [IObservable.SymbolValueNotification](#) [[▶ 1331](#)].

IObservable<NotificationValue>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [[▶ 876](#)]. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods \(Visual Basic\)](#) or [Extension Methods \(C# Programming Guide\)](#).

Exceptions

Exception	Condition
ArgumentNullException	symbol
ArgumentOutOfRangeException	Symbol is not an IValueSymbol - symbol

6.3.1.1.4.4 AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbolCollection, NotificationSettings)

Gets an observable sequence of [Notification](#) [[▶ 1100](#)] objects.

Namespace: [TwinCAT.Ads.Reactive](#) [▶ 1249]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 6.0.116+a71ced3

Syntax

C#

```
public static IObservable<SymbolValueNotification> WhenNotification(  
    this IAdsConnection client,  
    ISymbolCollection symbols,  
    NotificationSettings settings  
)
```

Parameters

client	Type: TwinCAT.Ads.IAdsConnection [▶ 876] The client.
symbols	Type: TwinCAT.TypeSystem.ISymbolCollection [▶ 2697] The symbols to observe.
settings	Type: TwinCAT.Ads.NotificationSettings [▶ 1106] The Notification settings.

Return Value

Type: [IObservable.SymbolValueNotification](#) [▶ 1331].
IObservable<NotificationValue>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type [IAdsConnection](#) [▶ 876]. When you use instance method syntax to call this method, omit the first parameter.
