2.1.1	Determine CRC	7
2.1.2	Determine EtherCAT address	8
2.1.3	Export Safety project	8
2.2	Customizing	10

# 1 Introduction

TwinSAFE includes several innovations that bring more functionality and performance to your safety controller. A major innovation is that the functionality of the safety controller is integrated in each TwinSAFE component. This means that you can, for example, use a TwinSAFE input component both as an input component and the safety control integrated on it to use application-specific pre-processing.

This is tutorial 17 of a tutorial series.

The aim of this tutorial series is to familiarize you with the TwinSAFE innovations using individual examples.

This tutorial is about a permanent deactivation of a running TwinSAFE group via the TwinSAFE Loader.

## 1.1 Version numbers

Version	Comment
1.0.0	• First released version
0.0.1	• First draft

## 1.2 Requirements

Meet the following requirements for this tutorial:

- TwinCAT 3 version  $\geq$  3.x
- TwinSAFE Loader = p7
- Tutorial 16

## 1.3 Starting point

At the starting point of the tutorial

- a TwinCAT 3 solution exists.

## 1.4 Demo system

### 1.4.1 Hardware

The demo system of this tutorial consists of the following hardware:

- CX for EtherCAT communication and the standard PLC controller
- EL6910 as master TwinSAFE Logic
- EL1918 with safe inputs for reading light barrier signals
- Light barrier
- AX8000-x2xx
- Engineering system connected via Ethernet

### 1.4.2 Desired functionality

This tutorial describes the realization of the following functionality:

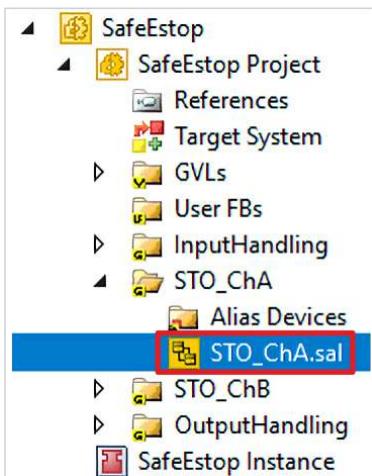

- Permanent deactivation of a TwinSAFE group with the help of customization settings in the TwinSAFE Loader.

## 2 Demonstration

### 2.1 Prepare Safety project

#### 2.1.1 Determine CRC

In this application, a TwinCAT 3 solution already exists with a Safety project for the demo system.

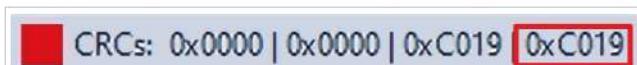

1. Open STO\_ChA

You can see in the Customization Settings of the STO functionality for ChA that a permanent deactivation of the functionality is already allowed.

2. Click on "Verify Complete Safety Project" in the menu bar to verify the Safety project

3. Note CRC

## 2.1.2 Determine EtherCAT address

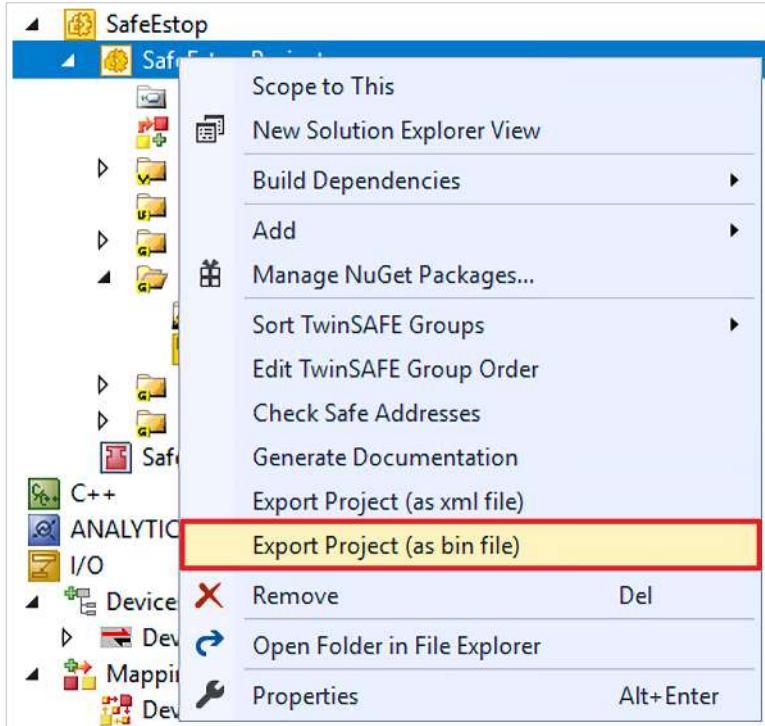

1. Open Device 1

Number	Box Name	Address	Type	In Size	Out Size	E-Bus (m...)
1	Term 1 (EK1200)		EK1200			
2	Term 2 (EL1918)	1001	EL1918	9.0	8.0	1835
3	Term 3 (EL6910)	1002	EL6910	15.0	17.0	1645
4	Term 4 (EK1122)	1003	EK1122			1425
5	Term 5 (AX8620-0000-01...	1004	AX8620-0000-0103	2.0		
6	Drive 6 (AX8206-0210-01...	1005	AX8206-0210-0104	32.0	32.0	1425
7	Term 7 (EL9011)		EL9011			

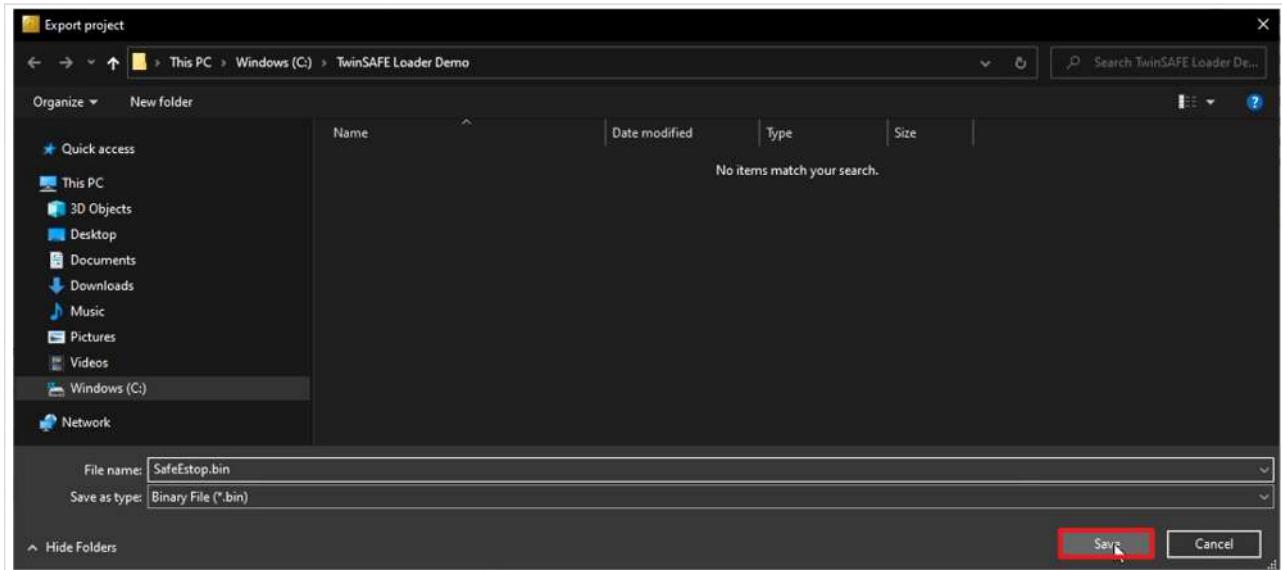

2. Note EtherCAT address of the EL6910

## 2.1.3 Export Safety project

1. Right click on the Safety project

2. Click on "Export Project (as bin file)"

3. Select location on the hard disk
4. Confirm location with "Save"

## 2.2 Customizing

### 1. Open command line

You can also start the command line via HMI or a batch file.

```
C:\TwinSAFE Loader Demo>TwinSAFE_Loader.exe --gw 192.168.100.254 --slave 1002 --list conf.csv
```

### 2. Download the Safety project via the command

### 3. Call up the TwinSAFE Loader and enter the following information

- Gateway configuration

```
--gw 192.168.100.254
```

- Slave address

```
--slave 1002
```

- Parameter list

```
--list conf.csv
```

### 4. Confirm with the enter button

```
C:\TwinSAFE Loader Demo>notepad conf.csv
```

### 5. Use the command shown to open the parameter list in notepad

### 6. Confirm with the enter button

In the notepad, you can see the customizing settings for each of the 4 TwinSAFE groups. At the first group you can see for example at „A;D;D;D“, that the group is activated and no further settings for passivation or deactivation can be made.

Since you have previously allowed a permanent deactivation for the second TwinSAFE group in the properties, you can make the corresponding settings in the notepad. Proceed as follows:

### 7. Change “A;D;D;E” to “E;D;D;A”

### 8. Save the change via Ctrl + S or via the context menu

### 9. Close notepad

### 10. Reopen the command line

```
C:\TwinSAFE Loader Demo>TwinSAFE_Loader.exe --gw 192.168.100.254 --user Administrator --pass
TwinSAFE --slave 1002 --customize conf.csv
```

### 11. Call up the TwinSAFE Loader via the shown command and enter the following information

- Gateway configuration

```
--gw 192.168.100.254
```

- Username for the target system

```
--user Administrator
```

- Password for the target system

```
--pass TwinSAFE
```

- Slave address

```
--slave 1002
```

- Customize list

```
--customize conf.csv
```

## 12. Confirm with the enter button

The customizing settings are passed to the target system.
